

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

BEACON LIGHTS OF HISTORY.

**DR. JOHN LORD'S
BEACON LIGHTS OF HISTORY.**

A series of lectures setting forth the great epochs and master minds of civilization,— a biographical history of the world's life.

Furnished to subscribers by the undersigned, either direct or through their representatives. For information address the Publishers,

**FORDS, HOWARD & HULBERT,
New York.**

LORD'S LECTURES.

BEACON LIGHTS
OF HISTORY.

BY JOHN LORD, LL.D.,

AUTHOR OF "THE OLD ROMAN WORLD," "MODERN EUROPE,"
ETC., ETC.

VOL. III.

RENAISSANCE AND REFORMATION

NEW YORK :
FORDS, HOWARD, AND HULBERT.

Copyright, 1884,
BY JOHN LORD.

Vol. III.

RENAISSANCE AND REFORMATION.

CONTENTS.

XXV.

DANTE.

RISE OF MODERN POETRY.

	PAGE
The antiquity of Poetry	23
The greatness of Poets	24
Their influence on Civilization	25
The true poet one of the rarest of men	25
The pre-eminence of Homer, Dante, Shakspeare, and Goethe	26
Characteristics of Dante	27
His precocity	28
His moral wisdom and great attainments	29
His terrible scorn and his isolation	30
State of society when Dante was born	31
His banishment	32
Guelphs and Ghibellines	33
Dante stimulated to his great task by an absorbing sentiment	34
Beatrice	35
Dante's passion for Beatrice analyzed	36
The worship of ideal qualities the foundation of lofty love .	37
The mystery of love	38-40
Its exalted realism	41
Dedication of Dante's life-labors to the departed Beatrice .	42

	Page
The Divine Comedy; a study	43
The Inferno; its graphic pictures	44
Its connection with the ideas of the Middle Ages	44
The physical hell of Dante in its connection with the Mediæ- val doctrine of Retribution	45
The Purgatorio; its moral wisdom	46
Origin of the doctrine of Purgatory	47
Its consolation amid the speculations of despair	48
The Paradiso	49
Its discussion of grand themes	50
The Divina Comœdia makes an epoch in civilization	51
Dante's life an epic	52
His exalted character	53
His posthumous influence	54, 55

XXVI.

GEOFFREY CHAUCER.

ENGLISH LIFE IN THE FOURTEENTH CENTURY.

The characteristics of the fourteenth century	59
Its great events and characters	60
State of society in England when Chaucer arose	61
His early life	63
His intimacy with John of Gaunt, the great Duke of Lan- caster	64
His prosperity	65
His poetry	66
The Canterbury Tales	68
Their fidelity to Nature and to English life	70
Connection of his poetry with the formation of the English Language	74
The Pilgrims of the Canterbury Tales	75-79

CONTENTS.

9

	PAGE
Chaucer's views of women and of love	81
His description of popular sports and amusements	82
'The preponderance of country life in the fourteenth century	84
Chaucer's description of popular superstitions	85
Of ecclesiastical abuses	86
His emancipation from the ideas of the Middle Ages	87
Peculiarities of his poetry	88
Chaucer's private life	89
The respect in which he was held	90
Influence of his poetry	91

XXVII.

CHRISTOPHER COLUMBUS.

MARITIME DISCOVERIES.

Marco Polo	95
His travels	96
The geographical problems of the fourteenth century	97
Sought to be solved by Christopher Columbus	98
The difficulties he had to encounter	99
Regarded as a visionary man	100
His persistence	101
Influence of women in great enterprises	102
Columbus introduced to Queen Isabella	103
Excuses for his opponents	104
The Queen favors his projects	105
The first voyage of Columbus	106
Its dangers	107
Discovery of the Bahama Islands	108
Discovery of Cuba and Hispaniola	109
Columbus returns to Spain	109
The excitement and enthusiasm produced by his discoveries	110

	PAGE
His second voyage	110
Extravagant expectations of Columbus	111
Disasters of the colonists	112
Decline of the popularity of Columbus	112
His third voyage	113
His arrest and disgrace	114
His fourth voyage	115
His death	115
Greatness of his services	116
Results of his discoveries	117, 118
Colonization	119
The mines of Peru and Mexico	119
The effects on Europe of the rapid increase of the precious metals	120
True sources of national wealth	121-125
The destinies of America	126-129
Its true mission	130-138

XXVIII.

SAVONAROLA.

UNSUCCESSFUL REFORMS.

The age of Savonarola	141
Revival of Classic Literature	142
Ecclesiastical corruptions	142
Religious apathy ; awakened intelligence ; infidel spirit . .	143
Youth of Savonarola	144
His piety	145
Begins to preach	146
His success at Florence	146
Peculiarities of his eloquence	147
Death of Lorenzo de Medici	147
Savonarola as a political leader	148

CONTENTS.

11

	PAGE
Denunciation of tyranny	149
His influence in giving a constitution to the Florentines .	150
Difficulties of Constitution-making	151
His method of teaching political science	152
Peculiarities of the new Rule	153
Its great wisdom	154
Savonarola as reformer	155
As moralist	156
Terrible denunciation of sin in high places	157
A prophet of woe	159
Contrast between Savonarola and Luther	160-163
The sermons of Savonarola	164
His marvellous eloquence	165
Its peculiarities	167
The enemies of Savonarola	168
Savonarola persecuted	169
His appeal to Europe	170
The people desert him	171
Months of torment	172, 173
His martyrdom	174
His character	175, 176
His posthumous influence	177-179

XXIX.

MICHAEL ANGELO.

THE REVIVAL OF ART.

Michael Angelo as representative of reviving Art	183
Ennobling effects of Art when inspired by lofty sentiments	184
Brilliancy of Art in the sixteenth century	185-188
Early life of Michael Angelo	189
His aptitude for Art	189
Patronized by Lorenzo de Medici	190

	Page
Sculpture later in its development than Architecture . . .	191
The chief works of Michael Angelo as sculptor	192
The peculiarity of his sculptures	193
Michael Angelo as painter	193
History of painting in the Middle Ages	194
Da Vinci	195
The frescos of the Sistine Chapel	196
The Last Judgment	197
The cartoon of the battle of Pisa	198
The variety as well as moral grandeur of Michael Angelo's paintings	199
Ennobling influence of his works	200
His works as architect	201
St. Peter's Church	202-205
Revival of Roman and Grecian Architecture	206
Contrasted with Gothic Architecture	207
Michael Angelo rescues the beauties of Paganism	209
Not responsible for absurdities of the Renaissance . . .	210
Greatness of Michael Angelo as a man	211
His industry, temperance, dignity of character, love of Art for Art's sake	212
His indifference to rewards and praises	213
His transcendent fame	214

XXX.

MARTIN LUTHER.

THE PROTESTANT REFORMATION.

Luther's predecessors	217
Corruptions of the Church	218
Luther the man for the work of reform	219
His peculiarities	220
His early piety	221

CONTENTS.

Opposition to science	491
His melancholy old age and blindness	492
Visited by John Milton ; comparison of the two, when blind	493
Consequence of Galileo's discoveries	494
Later results	495
Vastness of the universe	496
Grandeur of astronomical science	497

XXV.

D A N T E.

RISE OF MODERN POETRY.

A. D. 1265-1321.

BEACON LIGHTS.

XXV.

DANTE.

RISE OF MODERN POETRY.

THE first great genius who aroused his country from the torpor of the Middle Ages was a poet. Poetry, then, was the first influence which elevated the human mind amid the miseries of a gloomy period, if we may except the schools of philosophy which flourished in the rising universities. But poetry probably preceded all other forms of culture in Europe, even as it preceded philosophy and art in Greece. The gay Provençal singers were harbingers of Dante, even as unknown poets prepared the way for Homer. And as Homer was the creator of Grecian literature, so Dante, by his immortal comedy, gave the first great impulse to Italian thought. Hence poets are great benefactors, and we will not let them die in our memories or hearts. We crown them, when alive, with laurels and praises; and when they die, we erect monuments to their honor. They are dear to us,

since their writings give perpetual pleasure, and appeal to our loftiest sentiments. They appeal not merely to consecrated ideas and feelings, but they strive to conform to the principles of immortal art. Every great poet is as much an artist as the sculptor or the painter; and art survives learning itself. Varro, the most learned of the Romans, is forgotten, when Virgil is familiar to every school-boy. Cicero himself would not have been immortal, if his essays and orations had not conformed to the principles of art. Even an historian who would live must be an artist, like Voltaire or Macaulay. A cumbrous, or heavy, or pedantic historian will never be read, even if his learning be praised by all the critics of Germany.

Poets are the great artists of language. They even create languages, like Homer and Shakspeare. They are the ornaments of literature. But they are more than ornaments. They are the sages whose sayings are treasured up and valued and quoted from age to age, because of the inspiration which is given to them, — an insight into the mysteries of the soul and the secrets of life. A good song is never lost; a good poem is never buried, like a system of philosophy, but has an inherent vitality, like the melodies of the son of Jesse. Real poetry is something, too, beyond elaborate versification, which is one of the literary fashions, and passes away like other fashions unless redeemed by something that

arouses the soul, and elevates it, and appeals to the consciousness of universal humanity. It is the poets who make revelations, like prophets and sages of old; it is they who invest history with interest, like Shakespeare and Racine, and preserve what is most vital and valuable in it. They even adorn philosophy, like Lucretius, when he speculated on the systems of the Ionian philosophers. They certainly impress powerfully on the mind the truths of theology, as Watts and Cowper and Wesley did in their noble lyrics. So that the most rapt and imaginative of men, if artists, utilize the whole realm of knowledge, and diffuse it, and perpetuate it in artistic forms. But real poets are rare, even if there are many who glory in the jingle of language and the structure of rhyme. Poetry, to live, must have a soul, and it must combine rare things, — art, music, genius, original thought, wisdom made still richer by learning, and, above all, a power of appealing to inner sentiments, which all feel, yet are reluctant to express. So choice are the gifts, so grand are the qualities, so varied the attainments of truly great poets, that very few are born in a whole generation and in nations that number twenty or forty millions of people. They are the rarest of gifted men. Every nation can boast of its illustrious lawyers, statesmen, physicians, and orators; but they can point only to a few of their poets with pride. We can count on the fingers of one

of our hands all those worthy of poetic fame who now live in this great country of intellectual and civilized men, — one for every ten millions. How great the pre-eminence even of ordinary poets! How very great the pre-eminence of those few whom all ages and nations admire!

The critics assign to Dante a pre-eminence over most of those we call immortal. Only two or three other poets in the whole realm of literature, ancient or modern, dispute his throne. We compare him with Homer and Shakspeare, and perhaps Goethe, alone. Civilization glories in Virgil, Milton, Tasso, Racine, Pope, and Byron, — all immortal artists; but it points to only four men concerning whose transcendent creative power there is unanimity of judgment, — prodigies of genius, to whose influence and fame we can assign no limits; stars of such surpassing brilliancy that we can only gaze and wonder, — growing brighter and brighter, too, with the progress of ages; so remarkable that no barbarism will ever obscure their brightness, so original that all imitation of them becomes impossible and absurd. So great is original genius, directed by art and consecrated to lofty sentiments.

I have assumed the difficult task of presenting one of these great lights. But I do not presume to analyze his great poem, or to point out critically its excellencies. This would be beyond my powers, even if I

were an Italian. It takes a poet to reveal a poet. Nor is criticism interesting to ordinary minds, even in the hands of masters. I should make critics laugh if I were to attempt to dissect the *Divine Comedy*. Although, in an English dress, it is known to most people who pretend to be cultivated, yet it is not more read than the "*Paradise Lost*" or the "*Faerie Queene*," being too deep and learned for some, and understood by nobody without a tolerable acquaintance with the Middle Ages, which it interprets,—the superstitions, the loves, the hatreds, the ideas of ages which can never more return. All I can do—all that is safe for me to attempt—is to show the circumstances and conditions in which it was written, the sentiments which prompted it, its historical results, its general scope and end, and whatever makes its author stand out to us as a living man, bearing the sorrows and revelling in the joys of that high life which gave to him extraordinary moral wisdom, and made him a prophet and teacher to all generations. He was a man of sorrows, of resentments, fierce and implacable, but whose "love was as transcendent as his scorn,"—a man of vast experiences and intense convictions and superhuman earnestness, despising the world which he sought to elevate, living isolated in the midst of society, a wanderer and a sage, meditating constantly on the grandest themes, lost in ecstatic reveries, familiar with abstruse theories, versed

in all the wisdom of his day and in the history of the past, a believer in God and immortality, in rewards and punishments, and perpetually soaring to comprehend the mysteries of existence, and those ennobling truths which constitute the joy and the hope of renovated and emancipated and glorified spirits in the realms of eternal bliss. All this is history, and it is history alone which I seek to teach, — the outward life of a great man, with glimpses, if I can, of those visions of beauty and truth in which his soul lived, and which visions and experiences constitute his peculiar greatness. Dante was not so close an observer of human nature as Shakspeare, nor so great a painter of human actions as Homer, nor so learned a scholar as Milton; but his soul was more serious than either, — he was deeper, more intense than they; while in pathos, in earnestness, and in fiery emphasis he has been surpassed only by Hebrew poets and prophets.

It would seem from his numerous biographies that he was remarkable from a boy; that he was a youthful prodigy; that he was precocious, like Cicero and Pascal; that he early made great attainments, giving utterance to living thoughts and feelings, like Bacon, among boyish companions; lisping in numbers, like Pope, before he could write prose; different from all other boys, since no time can be fixed when he did not think and feel like a person of maturer years. Born

in Florence, of the noble family of the Alighieri, in the year 1265, his early education devolved upon his mother, his father having died while the boy was very young. His mother's friend, Brunetto Latini, famous as statesman and scholarly poet, was of great assistance in directing his tastes and studies. As a mere youth he wrote sonnets, such as *Sordello the Troubadour* would not disdain to own. He delights, as a boy, in those inquiries which gave fame to Bonaventura. He has an intuitive contempt for all quacks and pretenders. At Paris he maintains fourteen different theses, propounded by learned men, on different subjects, and gains universal admiration. He is early selected by his native city for important offices, which he fills with honor. In wit he encounters no superiors. He scorches courts by sarcasms which he can not restrain. He offends the great by a superiority which he does not attempt to veil. He affects no humility, for his nature is doubtless proud; he is even offensively conscious and arrogant. When Florence is deliberating about the choice of an ambassador to Rome, he playfully, yet still arrogantly, exclaims: "If I remain behind, who goes? and if I go, who remains behind?" His countenance, so austere and thoughtful, impresses all beholders with a sort of inborn greatness; his lip, in Giotto's portrait, is curled disdainfully, as if he lived among fools or knaves. He is given to no youthful

excesses; he lives simply and frugally. He rarely speaks unless spoken to; he is absorbed apparently in thought. Without a commanding physical person, he is a marked man to everybody, even when he deems himself a stranger. Women gaze at him with wonder and admiration, though he disdains their praises and avoids their flatteries. Men make way for him as he passes them, unconsciously. "Behold," said a group of ladies, as he walked slowly by them, "there is a man who has visited hell!" To the close of his life he was a great devourer of books, and digested their contents. His studies were as various as they were profound. He was familiar with the ancient poets and historians and philosophers; he was still better acquainted with the abstruse speculations of the schoolmen. He delighted in universities and scholastic retreats; from the cares and duties of public life he would retire to solitary labors, and dignify his retirement by improving studies. He did not live in a cell, like Jerome, or a cave, like Mohammed; but no man was ever more indebted to solitude and meditation than he for that insight and inspiration which communion with God and great ideas alone can give.

And yet, though a recluse and student, he had great experiences with life. He was born among the higher ranks of society. He inherited an ample patrimony. He did not shrink from public affairs. He was intensely

patriotic, like Michael Angelo ; he gave himself up to the good of his country, like Savonarola. Florence was small, but it was important ; it was already a capital, and a centre of industry. He represented its interests in various courts. He lived with princes and nobles. He took an active part in all public matters and disputations ; he was even familiar with the intrigues of parties ; he was a politician as well as scholar. He entered into the contests between Popes and Emperors respecting the independence of Italy. He was not conversant with art, for the great sculptors and painters had not then arisen. The age was still dark ; the mariner's compass had not been invented, chimneys had not been introduced, the comforts of life were few. Dames of highest rank still spent their days over the distaff or in combing flax. There were no grand structures but cathedral churches. Life was laborious, dismal, and turbulent. Law and order did not reign in cities or villages. The poor were oppressed by nobles. Commerce was small and manufactures scarce. Men lived in dreary houses, without luxuries, on coarse bread and fruit and vegetables. The crusades had not come to an end. It was the age of bad popes and quarrelsome nobles, and lazy monks and haughty bishops, and ignorant people, steeped in gloomy superstitions, two hundred years before America was discovered, and two hundred and fifty years before Michael Angelo erected the dome of St. Peter's.

But there was still in the wild and rough virtues sincerity and earnestness of character, though life was brutal. Men showed an immortality and an expansion of soul. The rising universities had gifted scholars whose logical speculations have never been rivalled for boldness and subtlety of logic. There were barons and ministers, not baronial knights and tournaments and this, and village life, and hospitable convents and gentle ladies, — gentle and lovely even in all states of civilization, winning by their graces and inspiring men to deeds of heroism and gallantry.

In one of those domestic revolutions which were so common in Italy Dante was banished, and his property was confiscated, and he, at the age of thirty-five, about the year 1300, when he was painting portraits, was sent forth a wanderer and in exile, now poor and unimportant, to eat the bread of strangers and climb other people's stairs, and so for years was he to the dominant party in his native city for his bitter spirit, that he was destined never to return to his home and friends. His ancestors, boasting of Roman descent, belonged to the patriotic party — the Guelphs, who had the ascendancy in his early years, — that party which defended the claims of the Popes against the Emperors of Germany. But this party had its divisions and rival families, — those that sided with the old

feudal nobles who had once ruled the city, and the new mercantile families that surpassed them in wealth and popular favor. So, expelled by a fraction of his own party that had gained power, Dante went over to the Ghibellines, and became an adherent of imperial authority until he died.

It was in his wanderings from court to court and castle to castle and convent to convent and university to university, that he acquired that profound experience with men and the world which fitted him for his great task. "Not as victorious knight on the field of Campaldino, not as leader of the Guelph aristocracy at Florence, not as prior, not as ambassador," but as a wanderer did he acquire his moral wisdom. He was a striking example of the severe experiences to which nearly all great benefactors have been subjected, — Abraham the exile, in the wilderness, in Egypt, among Philistines, among robbers and barbaric chieftains; the Prince Siddârtha, who founded Buddhism, in his wanderings among the various Indian nations who bowed down to Brahma; and, still greater, the Apostle Paul, in his protracted martyrdom among Pagan idolaters and boastful philosophers, in Asia and in Europe. These and others may be cited, who led a life of self-denial and reproach in order to spread the truths which save mankind. We naturally call their lot hard, even though they chose it; but it is the school of greatness. It was

sad to see the wisest and best man of his day, — a man of family, of culture, of wealth, of learning, loving leisure, attached to his home and country, accustomed to honor and independence, — doomed to exile, poverty, neglect, and hatred, without those compensations which men of genius in our time secure. But I would not attempt to excite pity for an outward condition which developed the higher virtues, — for a thorny path which led to the regions of eternal light. Dante may have walked in bitter tears to Paradise, but after the fashion of saints and martyrs in all ages of our world. He need but cast his eyes on that emblem which was erected on every pinnacle of Mediaeval churches to symbolize passing suffering with salvation infinite, — the great and august creed of the age in which he lived, though now buried amid the triumphs of an imposing material civilization whose end is the adoration of the majesty of man rather than the majesty of God, the wonders of creation rather than the greatness of the Creator.

But something more was required in order to write an immortal poem than even native genius, great learning, and profound experience. The soul must be stimulated to the work by an absorbing and ennobling passion. This passion Dante had; and it is as memorable as the mortal loves of Abélard and Héloïse, and infinitely more exalting, since it was spiritual and im-

mortal, — even the adoration of his lamented and departed Beatrice.

I wish to dwell for a moment, perhaps longer than to some may seem dignified, on this ideal or sentimental love. It may seem trivial and unimportant to the eye of youth, or a man of the world, or a woman of sensual nature, or to unthinking fools and butterflies; but it is invested with dignity to one who meditates on the mysteries of the soul, the wonders of our higher nature, — one of the things which arrest the attention of philosophers.

It is recorded and attested, even by Dante himself, that at the early age of nine he fell in love with Beatrice, — a little girl of one of his neighbors, — and that he wrote to her sonnets as the mistress of his devotion. How could he have written sonnets without an inspiration, unless he felt sentiments higher than we associate with either boys or girls? The boy was father of the man. “She appeared to me,” says the poet, “at a festival, dressed in that most noble and honorable color, scarlet, — girded and ornamented in a manner suitable to her age; and from that moment, love ruled my soul. And after many days had passed, it happened that, passing through the street, she turned her eyes to the spot where I stood, and with ineffable courtesy she greeted me; and this had such an effect on me that it seemed I had reached the furthest limit

of blessedness. I took refuge in the solitude of my chamber; and, thinking over what had happened to me, I proposed to write a sonnet, since I had already acquired the art of putting words into rhyme." This, from his "*Vita Nuova*," his first work, relating to the "new life" which this love awoke in his young soul.

Thus, according to Dante's own statement, was the seed of a never-ending passion planted in his soul,—the small beginning, so insignificant to cynical eyes, that it would almost seem preposterous to allude to it; as if this fancy for a little girl in scarlet, and in a boy but nine years of age, could ripen into anything worthy to be soberly mentioned by a grave and earnest poet, in the full maturity of his genius,—worthy to give direction to his lofty intellect, worthy to be the occasion of the greatest poem the world has seen from Homer to modern times. Absurd! ridiculous! Great rivers cannot rise from such a spring; tall trees cannot grow from such a little acorn. Thus reasons the man who does not take cognizance of the mighty mysteries of human life. If anything tempted the boy to write sonnets to a little girl, it must have been the chivalric element in society at that period, when even boys were required to choose objects of devotion, and to whom they were to be loyal, and whose honor they were bound to defend. But the grave poet, in the decline of his life, makes this simple confession, as the begin-

ning of that sentiment which never afterwards departed from him, and which inspired him to his grandest efforts.

But this youthful attachment was unfortunate. Beatrice did not return his passion, and had no conception of its force, and perhaps was not even worthy to call it forth. She may have been beautiful; she may have been gifted; she may have been commonplace. It matters little whether she was intellectual or not, beautiful or not. It was not the flesh and blood he saw, but the image of beauty and loveliness which his own mind created. He idealized the girl; she was to him all that he fancied. But she never encouraged him; she denied his greetings, and even avoided his society. At last she died, when he was twenty-seven, and left him — to use his own expression — “to ruminate on death, and envy whomsoever dies.” To console himself, he read Boëthius, and religious philosophy was ever afterwards his favorite study. Nor did serenity come, so deep were his sentiments, so powerful was his imagination, until he had formed an exalted purpose to write a poem in her honor, and worthy of his love. “If it please Him through whom all things come,” said Dante, “that my life be spared, I hope to tell such things of her as never before have been seen by any one.”

Now what inspired so strange a purpose? Was it a Platonic sentiment, like the love of Petrarch for Laura,

or something that we cannot explain, and yet real,—a mystery of the soul in its deepest cravings and aspirations? And is love, among mortals generally, based on such a foundation? Is it flesh and blood we love; is it the intellect; is it the character; is it the soul; is it what is inherently interesting in woman, and which everybody can see,—the real virtues of the heart and charms of physical beauty? Or is it what we fancy in the object of our adoration, what exists already in our own minds,—the archetypes of eternal ideas of beauty and grace? And do all men worship these forms of beauty which the imagination creates? Can any woman, or any man, seen exactly as they are, incite a love which is kindred to worship? And is any love worthy to be called love, if it does not inspire emotions which prompt to self-sacrifice, labor, and lofty ends? Can a woman's smiles incite to Herculean energies, and drive the willing worshipper to Aöonian heights, unless under these smiles are seen the light of life and the blessedness of supernatural fervor? Is there, and can there be, a perpetuity in mortal charms without the recognition or the supposition of a moral beauty connected with them, which alone is pure and imperishable, and which alone creates the sacred ecstasy that revels in the enjoyment of what is divine, or what is supposed to be divine, not in man, but in the conceptions of man,—the ever-blazing glories of good-

ness or of truth which the excited soul doth see in the eyes and expression of the adored image? It is these archetypes of divinity, real or fancied, which give to love all that is enduring. Destroy these, take away the real or fancied glories of the soul and mind, and the holy flame soon burns out. No mortal love can last, no mortal love is beautiful, unless the visions which the mind creates are not more or less realized in the object of it, or when a person, either man or woman, is not capable of seeing ideal perfections. The loves of savages are the loves of brutes. The more exalted the character and the soul, the greater is the capacity of love, and the deeper its fervor. It is not the object of love which creates this fervor, but the mind which is capable of investing it with glories. There could not have been such intensity in Dante's love had he not been gifted with the power of creating so lofty and beautiful an ideal; and it was this he worshipped,—not the real Beatrice, but the angelic beauty he thought he saw in her. Why could he not see the perfections he adored shining in other women, who perhaps had a higher claim to them? Ah, that is the mystery! And you cannot solve it any easier than you can tell why a flower blooms or a seed germinates. And why was it that Dante, with his great experience, could in later life see the qualities he adored in no other woman than in the cold and un-

appreciative girl who avoided him? Suppose she had become his wife, might he not have been disenchanted, and his veneration been succeeded by a bitter disappointment? Yet while the delusion lasted, no other woman could have filled her place; in no other woman could he have seen such charms; no other love could have inspired his soul to make such labors.

I would not be understood as declaring that married love must be necessarily a disenchantment. I would not thus libel humanity, and insult plain reason and experience. Many loves *are* happy, and burn brighter and brighter to the end; but it is because there are many who are worthy of them, both men and women, — because the ideal, which the mind created, is realized to a greater or less degree, although the loftier the archetype, the less seldom is it found. Nor is it necessary that perfection should be found. A person may have faults which alienate and disenchant, but with these there may be virtues so radiant that the worship, though imperfect, remains, — a respect, on the whole, so great that the soul is lifted to admiration. Who can love this perishable form, unless one sees in it some traits which belong to superior and immortal natures? And hence the sentiment, when pure, creates a sort of companionship of beings robed in celestial light, and exorcises those degrading passions which belong to earth. But Dante saw no imperfections in

Beatrice : perhaps he had no opportunity to see them. His own soul was so filled with love, his mind soared to such exalted regions of adoration, that when she passed away he saw her only in the beatified state, in company with saints and angels ; and he was wrapped in ecstasies which knew no end, — the unbroken adoration of beauty, grace, and truth, even of those eternal ideas on which Plato based all that is certain, and all that is worth living for ; that sublime realism without which life is a failure, and this world is “a mockery, a delusion, and a snare.”

This is the history and exposition of that love for Beatrice with which the whole spiritual life of Dante is identified, and without which the “Divine Comedy” might not have been written. I may have given to it disproportionate attention ; and it is true I might have allegorized it, and for love of a woman I might have substituted love for an art, — even the art of poetry, in which his soul doubtless lived, even as Michael Angelo, his greatest fellow-countryman, lived in the adoration of beauty, grace, and majesty. Oh, happy and favored is the person who lives in the enjoyment of an art ! It may be humble ; it may be grand. It may be music ; it may be painting, or sculpture, or architecture, or poetry, or oratory, or landscape gardening, yea, even farming, or needle-work, or house decoration, — anything which employs the higher faculties of

the mind, and brings order out of confusion, and takes one from himself, from the drudgery of mechanical labors, even if it be no higher than carving a mantel-piece or making a savory dish ; for all these things imply creation, alike the test and the reward of genius itself, which almost every human being possesses, in some form or other, to a greater or less degree, — one of the kindest gifts of Deity to man.

The great artist, kindled by his visions of imperishable loveliness in the person of his departed Beatrice, now resolves to dedicate to her honor his great life labor, — even his immortal poem, which should be a transcript of his thoughts, a mirror of his life, a record of his sorrows, a painting of his experiences, a description of what he saw, a digest of his great meditations, a thesaurus of the treasures of the Mediæval age, an exposition of its great and leading ideas in philosophy and in religion. Every great man wishes to leave behind some monument of his labors, to bless or instruct mankind. Any man without some form of this noble ambition lives in vain, even if his monument be no more than a cultivated farm rescued from wildness and sterility.

Now Dante's monument is "the marvellous, mystic, unfathomable song," in which he sang his sorrows and his joys, revealed his visions, and recorded the passions and sentiments of his age. It never can be popular,

because it is so difficult to be understood, and because its leading ideas are not in harmony with those which are now received. I doubt if anybody can delight in that poem, unless he sympathizes with the ideas of the Middle Ages; or, at least, unless he is familiar with them, and with the historical characters who lived in those turbulent and gloomy times. There is more talk and pretension about that book than any one that I know of. Like the "Faerie Queene" or the "Paradise Lost," it is a study rather than a recreation; one of those productions which an educated person ought to read in the course of his life, and which if he can read in the original, and has read, is apt to boast of, — like climbing a lofty mountain, enjoyable to some with youth and vigor and enthusiasm and love of nature, but a very toilsome thing to most people, especially if old and short-winded and gouty.

In the year 1309 the first part of the "Divine Comedy," the *Inferno*, was finished by Dante, at the age of forty-four, in the tenth year of his pilgrimage, under the roof of the Marquis of Lunigiana; and it was intrusted to the care of Fra Ilario, a monk living on the beautiful Ligurian shores. As everybody knows, it is a vivid, graphic picture of what was supposed to be the infernal regions, where great sinners are punished with various torments forever and ever. It is interesting for the excellence of the poetry, the brilliant analyses of char-

acters, the allusion to historical events, the bitter invectives, the intense sarcasms, and the serious, earnest spirit which underlies the descriptions. But there is very little of gentleness or compassion, in view of the protracted torments of the sufferers. We stand aghast in view of the miseries and monsters, furies and gorgons, snakes and fires, demons, filth, lakes of pitch, pools of blood, plains of scorching sands, circles, and chimeras dire, — a physical hell of utter and unspeakable dreariness and despair, awfully and powerfully described, but still repulsive. In each of the dismal abodes, far down in the bowels of the earth, which Dante is supposed to have visited with Virgil as a guide, in which some infernal deity presides, all sorts of physical tortures are accumulated, inflicted on traitors, murderers, robbers, — men who have committed great crimes, unpunished in their lifetime; such men as Cain, Judas, Ugolino, — men consigned to an infamous immortality. On the great culprits of history, and of Italy especially, Dante virtually sits in judgment; and he consigns them equally to various torments which we shudder to think of.

And here let me say, as a general criticism, that in the *Inferno* are brought out in tremendous language the opinions of the Middle Ages in reference to retribution. Dante does not rise above them, with all his genius; he is not emancipated from them. It is the rarest

thing in this world for any man, however profound his intellect and bold his spirit, to be emancipated from the great and leading ideas of his age. Abraham was, and Moses, and the founder of Buddhism, and Socrates, and Mohammed, and Luther ; but they were reformers, more or less divinely commissioned, with supernatural aid in many instances to give them wisdom. But Homer was not, nor Euripides, nor the great scholastics of the Middle Ages, nor even popes. The venerated doctors and philosophers, prelates, scholars, nobles, kings, to say nothing of the people, thought as Dante did in reference to future punishment, — that it was physical, awful, accumulative, infinite, endless ; the wrath of avenging deity displayed in pains and agonies inflicted on the body, like the tortures of inquisitors, thus appealing to the fears of men, on which chiefly the power of the clergy was based. Nor in these views of endless physical sufferings, as if the body itself were eternal and indestructible, is there the refinement of Milton, who placed misery in the upbraidings of conscience, in mental torture rather than bodily, in the everlasting pride and rebellion of the followers of Satan and his fallen angels. It was these awful views of protracted and eternal physical torments, — not the hell of the Bible, but the hell of priests, of human invention, — which gives to the Middle Ages a sorrowful and repulsive light, thus nursing superstition and working on

the fears of mankind, rather than on the conscience and the sense of moral accountability. But how could Dante have represented the ideas of the Middle Ages, if he had not painted his *Inferno* in the darkest colors that the imagination could conceive, unless he had soared beyond what is revealed into the unfathomable and mysterious and unrevealed regions of the second death ?

After various wanderings in France and Italy, and after an interval of three years, Dante produced the second part of the poem, — the *Purgatorio*, — in which he assumes another style, and sings another song. In this we are introduced to an illustrious company, — many beloved friends, poets, musicians, philosophers, generals, even prelates and popes, whose deeds and thoughts were on the whole beneficent. These illustrious men temporarily expiate the sins of anger, of envy, avarice, gluttony, pride, ambition, — the great defects which were blended with virtues, and which are to be purged out of them by suffering. Their torments are milder, and amid them they discourse on the principles of moral wisdom. They utter noble sentiments ; they discuss great themes ; they show how vain is wealth and power and fame ; they preach sermons. In these discourses, Dante shows his familiarity with history and philosophy ; he unfolds that moral wisdom for which he is most distinguished. His scorn is now

tempered with tenderness. He shows a true humanity; he is more forgiving, more generous, more sympathetic. He is more lofty, if he is not more intense. He sees the end of expiations: the sufferers will be restored to peace and joy.

But even in his purgatory, as in his hell, he paints the ideas of his age. He makes no new or extraordinary revelations. He arrives at no new philosophy. He is the Christian poet, after the pattern of his age.

It is plain that the Middle Ages must have accepted or invented some relief from punishment, or every Christian country would have been overwhelmed with the blackness of despair. Men could not live, if they felt they could not expiate their sins. Who could smile or joke or eat or sleep or have any pleasure, if he thought seriously there would be no cessation or release from endless pains? Who could discharge his ordinary duties or perform his daily occupations, if his father or his mother or his sister or his brother or his wife or his son or his daughter might not be finally forgiven for the frailties of an imperfect nature which he had inherited? The Catholic Church, in its benignity,—at what time I do not know,—opened the future of hope amid the speculations of despair. She saved the Middle Ages from universal gloom. If speculation or logic or tradition or scripture pointed to a hell of reprobation, there must be also a purgatory as the field of expiation,—

for expiation there must be for sin, somewhere, somehow, according to immutable laws, unless a mantle of universal forgiveness were spread over sinners who in this life had given no sufficient proofs of repentance and faith. Expiation was the great element of Mediæval theology. It may have been borrowed from India, but it was engrafted on the Christian system. Sometimes it was made to take place in this life; when the sinner, having pleased God, entered at once upon heavenly beatitudes. Hence fastings, scourgings, self-laceration, ascetic rigors in dress and food, pilgrimages, — all to purchase forgiveness; which idea of forgiveness was scattered to the winds by Luther, and replaced by grace, — faith in Christ attested by a righteous life. I allude to this notion of purgatory, which early entered into the creeds of theologians, and which was adopted by the Catholic Church, to show how powerful it was when human consciousness sought a relief from the pains of endless physical torments.

After Dante had written his *Purgatorio*, he retired to the picturesque mountains which separate Tuscany from Modena and Bologna; and in the hospitium of an ancient monastery, “on the woody summit of a rock from which he might gaze on his ungrateful country, he renewed his studies in philosophy and theology.” There, too, in that calm retreat, he commenced his

Paradiso, the subject of profound meditations on what was held in highest value in the Middle Ages. The themes are theological and metaphysical. They are such as interested Thomas Aquinas and Bonaventura, Anselm and Bernard. They are such as do not interest this age, — even the most gifted minds, — for our times are comparatively indifferent to metaphysical subtleties and speculations. Beatrice and Peter and Benedict alike discourse on the recondite subjects of the Bible in the style of Mediæval doctors. The themes are great, — the incarnation, the immortality of the soul, the resurrection of the body, salvation by faith, the triumph of Christ, the glory of Paradise, the mysteries of the divine and human natures; and with these disquisitions are reproofs of bad popes, and even of some of the bad customs of the Church, like indulgences, and the corruptions of the monastic system. The *Paradiso* is a thesaurus of Mediæval theology, — obscure, but lofty, mixed up with all the learning of the age, even of the lives of saints and heroes and kings and prophets. Saint Peter examines Dante upon faith, James upon hope, and John upon charity. Virgil here has ceased to be his guide; but Beatrice, robed in celestial loveliness, conducts him from circle to circle, and explains the sublimest doctrines and resolves his mortal doubts, — the object still of his adoration, and inferior only to the mother of our Lord, *regina angelorum, mater caris-*

sima, whom the Church even then devoutly worshipped, and to whom the greatest sages prayed.

“Thou virgin mother, daughter of thy Son,
Humble and high beyond all other creatures,
The limit fixed of the eternal counsel, —
Thou art the one who such nobility
To human nature gave, that its Creator
Did not disdain to make himself its creature.
Not only thy benignity gives succor
To him who asketh it, but oftentimes
Forerunneth of its own accord the asking.
In thee compassion is ; in thee is pity ;
In thee magnificence ; in thee unites
Whate’er of goodness is in any creature.”

In the glorious meditation of those grand subjects which had such a charm for Benedict and Bernard, and which almost offset the barbarism and misery of the Middle Ages,—to many still regarded as “ages of faith,”—Dante seemingly forgets his wrongs ; and in the company of her whom he adores he seems to revel in the solemn ecstasy of a soul transported to the realms of eternal light. He lives now with the angels and the mysteries, —

“Like to the fire
That in a cloud imprisoned doth break out expansive.
.
Thus, in that heavenly banqueting his soul
Outgrew himself, and, in the transport lost,
Holds no remembrance now of what she was.”

The Paradise of Dante is not gloomy, although it be obscure and indefinite. It is the unexplored world of thought and knowledge, the explanation of dogmas which his age accepted. It is a revelation of glories such as only a lofty soul could conceive, but could not paint, — a supernal happiness given only to favored mortals, to saints and martyrs who have triumphed over the seductions of sense and the temptations of life, — a beatified state of blended ecstasy and love.

“Had I a tongue in eloquence as rich as is the coloring in fancy’s loom,

’T were all too poor to utter the least part of that enchantment.”

Such is this great poem ; in all its parts an exposition of the ideas of the age, — sometimes fierce and sometimes tender, profound and infantine, lofty and degraded, like the Church itself, which conserved these sentiments. It is an intensely religious poem, and yet more theological than Christian, and full of classical allusions to pagan heroes and sages, — a most remarkable production considering the age, and, when we remember that it is without a prototype in any language, a glorious monument of reviving literature, both original and powerful.

Its appearance was of course an epoch, calling out the admiration of Italians, and of all who could understand it, — of all who appreciated its moral wisdom in every other country of Europe. And its fame has been

steadily increasing, although I fear much of the popular enthusiasm is exaggerated and unfelt. One who can read Italian well may see its "fiery emphasis and depth," its condensed thought and language, its supernal scorn and supernal love, its bitterness and its forgiveness; but very few sympathize with its theology or its philosophy, or care at all for the men whose crimes he punishes, and whose virtues he rewards.

But there is great interest in the man, as well as in the poem which he made the mirror of his life, and the register of his sorrows and of those speculations in which he sought to banish the remembrance of his misfortunes. His life, like his poem, is an epic. We sympathize with his resentments, "which exile and poverty made perpetually fresh." "The sincerity of his early passion for Beatrice," says Hallam, "pierces through the veil of allegory which surrounds her, while the memory of his injuries pursues him into the immensity of eternal light; and even in the company of saints and angels his unforgiving spirit darkens at the name of Florence. . . . He combines the profoundest feelings of religion with those patriotic recollections which were suggested by the reappearance of the illustrious dead."

Next to Michael Angelo he was the best of all famous Italians, stained by no marked defects but bitterness, pride, and scorn; while his piety, his patriotism, and elevation of soul stand out in marked contrast with the

selfishness and venality and hypocrisy and cruelty of the leading men in the history of his times. "He wrote with his heart's blood;" he wrote in poverty, exile, grief, and neglect; he wrote like an inspired prophet of old. He seems to have been specially raised up to exalt virtue, and vindicate the ways of God to man, and prepare the way for a new civilization. He breathes angry defiance to all tyrants; he consigns even popes to the torments he created. He ridicules fools; he exposes knaves. He detests oppression; he is a prophet of liberty. He sees into all shams and all hypocrisies, and denounces lies. He is temperate in eating and drinking; he has no vices. He believes in friendship, in love, in truth. He labors for the good of his countrymen. He is affectionate to those who comprehend him. He accepts hospitalities, but will not stoop to meanness nor injustice. He will not return to his native city, which he loves so well, even when permitted, if obliged to submit to humiliating ceremonies. He even refuses a laurel crown from any city but from the one in which he was born. No honors could tempt him to be untrue unto himself; no tasks are too humble to perform, if he can make himself useful. At Ravenna he gives lectures to the people in their own language, regarding the restoration of the Latin impossible, and wishing to bring into estimation the richness of the vernacular tongue. And when his

work is done he dies, before he becomes old (1321), having fulfilled his vow. His last retreat was at Ravenna, and his last days were soothed with gentle attentions from Guido da Polenta, that kind duke who revived his fainting hopes. It was in his service, as ambassador to Venice, that Dante sickened and died. A funeral sermon was pronounced upon him by his friend the duke, and beautiful monuments were erected to his memory. Too late the Florentines begged for his remains, and did justice to the man and the poet; as well they might, since his is the proudest name connected with their annals. He is indeed one of the great benefactors of the world itself, for the richness of his immortal legacy.

Could the proscribed and exiled poet, as he wandered, isolated and alone, over the vine-clad hills of Italy, and as he stopped here and there at some friendly monastery, wearied and hungry, have cast his prophetic eye down the vistas of the ages; could he have seen what honors would be bestowed upon his name, and how his poem, written in sorrow, would be scattered in joy among all nations, giving a new direction to human thought, shining as a fixed star in the realms of genius, and kindling into shining brightness what is only a reflection of its rays; yea, how it would be committed to memory in the rising universities, and be commented on by the most learned expositors in all the schools of

Europe, lauded to the skies by his countrymen, received by the whole world as a unique, original, unapproachable production, suggesting grand thoughts to Milton, reappearing even in the creations of Michael Angelo, coloring art itself whenever art seeks the sublime and beautiful, inspiring all subsequent literature, dignifying the life of letters, and gilding philosophy as well as poetry with new glories, — could he have seen all this, how his exultant soul would have rejoiced, even as did Abraham, when, amid the ashes of the funeral pyre he had prepared for Isaac, he saw the future glories of his descendants; or as Bacon, when, amid calumnies, he foresaw that his name and memory would be held in honor by posterity, and that his method would be received by all future philosophers as one of the priceless boons of genius to mankind!

GEOFFREY CHAUCER.

ENGLISH LIFE IN THE FOURTEENTH CENTURY

A. D. 1328-1400.

XXVI.

GEOFFREY CHAUCER.

ENGLISH LIFE IN THE FOURTEENTH CENTURY.

THE age which produced Chaucer was a transition period from the Middle Ages to modern times, midway between Dante and Michael Angelo. Chaucer was the contemporary of Wyclif, with whom the Middle Ages may appropriately be said to close, or modern history to begin.

The fourteenth century is interesting for the awakening, especially in Italy, of literature and art; for the wars between the French and English, and the English and the Scots; for the rivalry between the Italian republics; for the efforts of Rienzi to establish popular freedom at Rome; for the insurrection of the Flemish weavers, under the Van Arteveldes, against their feudal oppressors; for the terrible "Jaquerie" in Paris; for the insurrection of Wat Tyler in England; for the Swiss confederation; for a schism in the Church when the popes retired to Avignon; for the aggrandizement of the Visconti at Milan and the Medici at Florence;

for incipient religious reforms under Wyclif in England and John Huss in Bohemia ; for the foundation of new colleges at Oxford and Cambridge ; for the establishment of guilds in London ; for the exploration of distant countries ; for the dreadful pestilence which swept over Europe, known in England as the Black Death ; for the development of modern languages by the poets ; and for the rise of the English House of Commons as a great constitutional power.

In most of these movements we see especially a simultaneous rising among the people, in the more civilized countries of Europe, to obtain charters of freedom and municipal and political privileges, extorted from monarchs in their necessities. The fourteenth century was marked by protests and warfare equally against feudal institutions and royal tyranny. The way was prepared by the wars of kings, which crippled their resources, as the Crusades had done a century before. The supreme miseries of the people led them to political revolts and insurrections, — blind but fierce movements, not inspired by ideas of liberty, but by a sense of oppression and degradation. Accompanying these popular insurrections were religious protests against the corrupt institutions of the Church.

In the midst of these popular agitations, aggressive and needless wars, public miseries and calamities, baro-

nial aggrandizement, religious inquiries, parliamentary encroachment, and reviving taste for literature and art, Chaucer arose.

His remarkable career extended over the last half of the fourteenth century, when public events were of considerable historical importance. It was then that parliamentary history became interesting. Until then the barons, clergy, knights of the shire, and burgesses of the town, summoned to assist the royal councils, deliberated in separate chambers or halls; but in the reign of Edward III. the representatives of the knights of the shires and the burgesses united their interests and formed a body strong enough to check royal encroachments, and became known henceforth as the House of Commons. In thirty years this body had wrested from the Crown the power of arbitrary taxation, had forced upon it new ministers, and had established the principle that the redress of grievances preceded grants of supply. Edward III. was compelled to grant twenty parliamentary confirmations of Magna Charta. At the close of his reign, it was conceded that taxes could be raised only by consent of the Commons; and they had sufficient power, also, to prevent the collection of the tax which the Pope had levied on the country since the time of John, called Peter's Pence. The latter part of the fourteenth century must not be regarded as an era of the triumph of popular rights, but as

the period when these rights began to be asserted. Long and dreary was the march of the people to complete political enfranchisement from the rebellion under Wat Tyler to the passage of the Reform Bill in our times. But the Commons made a memorable stand against Edward III. when he was the most powerful sovereign of western Europe, one which would have been impossible had not this able and ambitious sovereign been embroiled in desperate war both with the Scotch and French.

With the assertion of political rights we notice the beginning of commercial enterprise and manufacturing industry. A colony of Flemish weavers was established in England by the enlightened king, although wool continued to be exported. It was not until the time of Elizabeth that the raw material was consumed at home.

Still, the condition of the common people was dreary enough at this time, when compared with what it is in our age. They perhaps were better fed on the necessities of life than they are now. All meats were comparatively cheaper; but they had no luxuries, not even wheaten bread. Their houses were small and dingy, and a single chamber sufficed for a whole family, both male and female. Neither glass windows nor chimneys were then in use, nor knives nor forks, nor tea nor coffee; not even potatoes, still less tropical

fruits. The people had neither bed-clothes, nor carpets, nor glass nor crockery ware, nor cotton dresses, nor books, nor schools. They were robbed by feudal masters, and cheated and imposed upon by friars and pedlers; but a grim cheerfulness shone above their discomforts and miseries, and crime was uncommon and severely punished. They amused themselves with rough sports, and cherished religious sentiments. They were brave and patriotic.

It was to describe the habits and customs of these people, as well as those of the classes above them, to give dignity to consecrated sentiments and to shape the English language, that Chaucer was raised up.

He was born, it is generally supposed, in the year 1328; but nothing is definitely known of him till 1357, when Edward III. had been reigning about thirty years. It is surmised that his father was a respectable citizen of London; that he was educated at Cambridge and Oxford; that he went to Paris to complete his education in the most famous university in the world; that he then extensively travelled in France, Holland, and Flanders, after which he became a student of law in the Inner Temple. Even then he was known as a poet, and his learning and accomplishments attracted the attention of Edward III., who was a patron of genius, and who gave him a house in Woodstock, near the royal palace. At this time Chaucer was a handsome,

It was then that the intimacy began between John of Gaunt, a youth of eighteen, then Duke of Richmond, second son of Edward III., afterwards known as the great Duke of Lancaster, — the most powerful nobleman that ever lived in England, the richest, possessing large estates in eighteen counties as well as six earldoms. This friendship between the poet and the first prince of the blood, after the death of Edward of Wales, seems to have arisen from the admiration which John of Gaunt felt for the genius and accomplishments of Chaucer, who was about ten years the elder. It was not until the prince became the Duke of Lancaster that he was the friend and protector of Wyclif, — and for different reasons, seeing that the Oxford scholar and theologian could be of use to him in his warfare against the clergy, who were hostile to his ambitious career. Chaucer he loved as a bright and witty companion; Wyclif he honored as the most learned churchman of the age.

the peace of Brétigny. In this unfortunate campaign Chaucer was taken prisoner, but was ransomed by his sovereign for £16,—about equal to £300 in these times. He had probably before this been installed at court as a gentleman of the bedchamber, on a stipend which would now be equal to £250 a year. He seems to have been a favorite with the court, after he had written his first great poem. It is singular that in a rude and ignorant age poets should have received much greater honor than in our enlightened times. Gower was patronized by the Duke of Gloucester, as Chaucer was by the Duke of Lancaster, and Petrarch and Boccaccio were in Italy by princes and nobles. Even learning was held in more reverence in the fourteenth century than it is in the nineteenth. The scholastic doctor was one of the great dignitaries of the age, as well as of the schools, and ranked with bishops and abbots. Wyclif at one time was the most influential man in the English Church, sitting in Parliament, and sent by the king on important diplomatic missions. So Chaucer, with less claim, received valuable offices and land-grants, which made him a wealthy man; and he was also sent on important missions in the company of nobles. He lived at the court. His son Thomas married one of the richest heiresses in the kingdom, and became speaker of the House of Commons; while his daughter Alice married the Duke of Suffolk, whose grandson was

declared by Richard III. to be his heir, and came near becoming King of England. Chaucer's wife's sister married the Duke of Lancaster himself; so he was allied with the royal family, if not by blood, at least by ambitious marriage connections.

I know of no poet in the history of England who occupied so high a social position as did Chaucer, or who received so many honors. The poet of the people was the companion of kings and princes. At one time he had a reverse of fortune, when his friend and patron, the Duke of Lancaster, was in disgrace and in voluntary banishment during the minority of Richard II., against whom he had intrigued, and who afterwards was de-throned by Henry IV., a son of the Duke of Lancaster. While the Duke of Gloucester was in power, Chaucer was deprived of his offices and revenues for two or three years, and was even imprisoned in the Tower; but when Lancaster returned from the Continent, his offices and revenues were restored. His latter days were luxurious and honored. At sixty-three he gave up his public duties as a collector of customs, chiefly on wool, and retired to Woodstock and spent the remainder of his fortunate life in dignified leisure and literary labors. In addition to his revenues, the Duke of Lancaster, who was virtually the ruler of the land during the reign of Richard II., gave him the castle of Donnington, with its park and gardens; so that he became a man of terri-

torial influence. At the age of seventy he removed to London, and took a house in the precincts of Westminster Abbey, where the chapel of Henry VII. now stands. He died the following year, and was buried in the Abbey church,—that sepulchre of princes and bishops and abbots. His body was deposited in the place now known as the Poets' Corner, and a fitting monument to his genius was erected over his remains, as the first great poet that had appeared in England, probably only surpassed in genius by Shakspeare, until the language assumed its present form. He was regarded as a moral phenomenon, whom kings and princes delighted to honor. As Leonardo da Vinci died in the arms of Francis I., so Chaucer rested in his grave near the bodies of those sovereigns and princes with whom he lived in intimacy and friendship. It was the rarity of his gifts, his great attainments, elegant manners, and refined tastes which made him the companion of the great, since at that time only princes and nobles and ecclesiastical dignitaries could appreciate his genius or enjoy his writings.

Although Chaucer had written several poems which were admired in his day, and made translations from the French, among which was the "*Roman de la Rose*," the most popular poem of the Middle Ages, — a poem which represented the difficulties attendant on the passion of love, under the emblem of a rose which had to

be plucked amid thorns, — yet his best works were written in the leisure of declining years.

The occupation of the poet during the last twelve years of his life was in writing his “Canterbury Tales,” on which his fame chiefly rests; written not for money, but because he was impelled to write it, as all true poets write and all great artists paint, — *ex animo*, — because they cannot help writing and painting, as the solace and enjoyment of life. For his day these tales were a great work of art, evidently written with great care. They are also stamped with the inspiration of genius, although the stories themselves were copied in the main from the French and Italian, even as the French and Italians copied from Oriental writers, whose works were translated into the languages of Europe; so that the romances of the Middle Ages were originally produced in India, Persia, and Arabia. Absolute creation is very rare. Even Shakspeare, the most original of poets, was indebted to French and Italian writers for the plots of many of his best dramas. Who can tell the remote sources of human invention; who knows the then popular songs which Homer probably incorporated in his epics; who can trace the fountains of those streams which have fertilized the literary world? — and hence, how shallow the criticism which would detract from literary genius because it is indebted, more or less, to the men who have lived ages

ago. It is the way of putting things which constitutes the merit of men of genius. What has Voltaire or Hume or Froude told the world, essentially, that it did not know before? Read, for instance, half-a-dozen historians on Joan of Arc: they all relate substantially the same facts. Genius and originality are seen in the reflections and deductions and grand sentiments prompted by the narrative. Let half-a-dozen distinguished and learned theologians write sermons on Abraham or Moses or David: they will all be different, yet the main facts will be common to all.

The "Canterbury Tales" are great creations, from the humor, the wit, the naturalness, the vividness of description, and the beauty of the sentiments displayed in them, although sullied by occasional vulgarities and impurities, which, however, in all their coarseness do not corrupt the mind. Byron complained of their coarseness, but Byron's poetry is far more demoralizing. The age was coarse, not the mind of the author. And after five hundred years, with all the obscurity of language and obsolete modes of spelling, they still give pleasure to the true lovers of poetry when they have once mastered the language, which is not, after all, very difficult. It is true that most people prefer to read the great masters of poetry in later times; but the "Canterbury Tales" are interesting and instructive to those who study the history of language and litera-

fresh and living colors. We see them in their feasts, their dwellings, their language, their dress, and their manners. Amid all the changes in the mode of thought and in social institutions the character of our common humanity, essentially the same in all human conditions. The men and women of the fourteenth century love and hate, eat and drink, and talk, as they do in the nineteenth. They dress, as we do, in the varieties of dress, of parade, of religious feasts. Although the form of these has changed, they are alive to the same sentiments which we are. They like fun and jokes and amusement as we. They abhor the same class of defects which disgust us, — hypocrisies, shams, lies. The intensity of their friendship is the same as ours to-day, their sincerity and admiration. There is the same variety in character, and yet the same uniformity. The human heart beats to the same sentiments throughout all under all civilizations and conditions of life. No man can live without friendship and sympathy. . . .

years ago, excite the same emotions in the minds of the people of England or France or America that they did among the Jews? It is because they appeal to our common humanity, which never changes, — the same to-day as it was in the beginning, and will be to the end. It is only form and fashion which change; men remain the same. The men and women of the Bible talked nearly the same as we do, and seem to have had as great light on the primal principles of wisdom and truth and virtue. Who can improve on the sagacity and worldly wisdom of the Proverbs of Solomon? They have a perennial freshness, and appeal to universal experience. It is this fidelity to nature which is one of the great charms of Shakspeare. We quote his brief sayings as expressive of what we feel and know of the certitudes of our moral and intellectual life. They will last forever, under every variety of government, of social institutions, of races, and of languages. And they will last because these every-day sentiments are put in such pithy, compressed, unique, and novel form, like the Proverbs of Solomon or the sayings of Epictetus. All nations and ages alike recognize the moral wisdom in the sayings of those immortal sages whose writings have delighted and enlightened the world, because they appeal to consciousness or experience.

Now it must be confessed that the poetry of Chaucer

does not abound in the moral wisdom and spiritual insight and profound reflections on the great mysteries of human life which stand out so conspicuously in the writings of Dante, Shakspeare, Milton, Goethe, and other first-class poets. He does not describe the inner life, but the outward habits and condition of the people of his times. He is not serious enough, nor learned enough, to enter upon the discussion of those high themes which agitated the schools and universities, as Dante did one hundred years before. He tells us how monks and friars lived, not how they dreamed and speculated. Nor are his sarcasms scorching and bitter, but rather humorous and laughable. He shows himself to be a genial and loving companion, not an austere teacher of disagreeable truths. He is not solemn and intense, like Dante; he does not give wings to his fancy, like Spenser; he has not the divine insight of Shakspeare; he is not learned, like Milton; he is not sarcastic, like Pope; he does not rouse the passions, like Byron; he is not meditative, like Wordsworth, — but he paints nature with great accuracy and delicacy, as also the men and women of his age, as they appeared in their outward life. He describes the passion of love with great tenderness and simplicity. In all his poems, love is his greatest theme, — which he bases, not on physical charms, but the moral beauty of the soul. In his earlier life he does not seem to have done full jus-

tice to women, whom he ridicules, but does not despise ; in whom he indeed sees the graces of chivalry, but not the intellectual attraction of cultivated life. But later in life, when his experiences are broader and more profound, he makes amends for his former mistakes. In his "Legend of Good Women," which he wrote at the command of Anne of Bohemia, wife of Richard II., he eulogizes the sex and paints the most exalted sentiments of the heart. He not only had great vividness in the description of his characters, but doubtless great dramatic talent, which his age did not call out. His descriptions of nature are very fresh and beautiful, indicating a great love of nature, — flowers, trees, birds, lawns, gardens, waterfalls, falcons, dogs, horses, with whom he almost talked. He had a great sense of the ridiculous ; hence his humor and fun and droll descriptions, which will ever interest because they are so fresh and vivid. And as a poet he continually improved as he advanced in life. His last works are his best, showing the care and labor he bestowed, as well as his fidelity to nature. I am amazed, considering his time, that he was so great an artist without having a knowledge of the principles of art as taught by the great masters of composition.

But, as has been already said, his distinguishing excellence is vivid and natural description of the life and habits, not the opinions, of the people of the four-

teenth century, described without exaggeration or effort for effect. He paints his age as Molière paints the times of Louis XIV., and Homer the heroic periods of Grecian history. This fidelity to nature and inexhaustible humor and living freshness and perpetual variety are the eternal charms of the "Canterbury Tales." They bring before the eye the varied professions and trades and habits and customs of the fourteenth century. We see how our ancestors dressed and talked and ate; what pleasures delighted them, what animosities moved them, what sentiments elevated them, and what follies made them ridiculous. The same naturalness and humor which marked "Don Quixote" and the "Decameron" also are seen in the "Canterbury Tales." Chaucer freed himself from all the affectations and extravagances and artificiality which characterized the poetry of the Middle Ages. With him began a new style in writing. He and Wyclif are the creators of English literature. They did not create a language, but they formed and polished it.

The various persons who figure in the "Canterbury Tales" are too well known for me to enlarge upon. Who can add anything to the Prologue in which Chaucer himself describes the varied characters and habits and appearance of the pilgrims to the shrine of Thomas à Becket at Canterbury? There are thirty of these pilgrims, including the poet himself, embracing nearly

all the professions and trades then known, except the higher dignitaries of Church and State, who are not supposed to mix freely in ordinary intercourse, and whom it would be unwise to paint in their marked peculiarities. The most prominent person, as to social standing, is probably the knight. He is not a nobleman, but he has fought in many battles, and has travelled extensively. His cassock is soiled, and his horse is strong but not gay, — a very respectable man, courteous and gallant, a soldier corresponding to a modern colonel or captain. His son, the esquire, is a youth of twenty, with curled locks and embroidered dress, shining in various colors like the flowers of May, gay as a bird, active as a deer, and gentle as a maiden. The yeoman who attends them both is clad in green like a forester, with arrows and feathers, bearing the heavy sword and buckler of his master. The prioress is another respectable person, coy and simple, with dainty fingers, small mouth, and clean attire, — a refined sort of a woman for that age, ornamented with corals and brooch, so stately as to be held in reverence, yet so sentimental as to weep for a mouse caught in a trap: all characteristic of a respectable, kind-hearted lady who has lived in seclusion. A monk, of course, in the fourteenth century was everywhere to be seen; and a monk we have among the pilgrims, riding a “dainty” horse, accompanied with greyhounds, loving

fur trimmings on his Benedictine habit and a fat swan to roast. The friar, too, we see, — a mendicant, yet merry and full of dalliances, beloved by the common women, to whom he gave easy absolution ; a jolly vagabond, who knew all the taverns, and who carried on his portly person pins and songs and relics to sell or to give away. And there was the merchant, with forked beard and Flemish beaver hat and neatly clasped boots, bragging of his gains and selling French crowns, but on the whole a worthy man. The Oxford clerk or scholar is one of the company, silent and sententious, as lean as the horse on which he rode, with threadbare coat, and books of Aristotle and his philosophy which he valued more than gold, of which indeed he could boast but little, — a man anxious to learn, and still more to teach. The sergeant of the law is another prominent figure, wary and wise, discreet and dignified, bustling and busy, yet not so busy as he seemed to be, wearing a coat of divers colors, and riding very badly. A franklin, or country gentleman, mixes with the company, with a white beard and red complexion ; one of Epicurus's own sons, who held that ale and wheaten bread and fish and dainty flesh, partridge fat, were pure felicity ; evidently a man given to hospitality, —

“ His table dormant in his hall alway
Stood ready covered all the longe day.”

He was a sheriff, also, to enforce the law, and to be present at all the county sessions. The doctor, of course, could not be left out of the company,—a man who knew the cause of every malady, versed in magic as well as physic, and grounded also in astronomy; who held that gold is the best of cordials, and knew how to keep what he gained; not luxurious in his diet, but careful what he ate and drank. The village miller is not forgotten in this motley crowd,—rough, brutal, drunken, big and brawn, with a red beard and a wart on his nose, and a mouth as wide as a furnace, a reveler and a jangler, accustomed to take toll thrice, and given to all the sins that then abounded. He is the most repulsive figure in the crowd, both vulgar and wicked. In contrast with him is the *reve*, or steward, of a lordly house,—a slender, choleric man, feared by servants and gamekeepers, yet in favor with his lord, since he always had money to lend, although it belonged to his master; an adroit agent and manager, who so complicated his accounts that no auditor could unravel them or any person bring him in arrears. He rode a fine dappled-gray stallion, wore a long blue overcoat, and carried a rusty sword,—evidently a proud and prosperous man. With a monk and friar, the picture would be incomplete without a pardoner, or seller of indulgences, with yellow hair and smooth face, loaded with a pillow-case of relics and pieces of the true cross,

were afraid, fond of garlic and onion wine, and speaking only Latin law-terms, was drunk, but withal a good fellow, abstinence and drunkenness. In contrast with the "sompnour" we see the poor parson, simple, kind, charity, and love, — a true shepherd, who waited upon no pomp or worldly gains, happy only in the virtue he both taught and lived. Some think that in view of the learned Wyclif when he describes the interesting character of the whole group, the first was a ploughman, his brother, as good as the first, he, living in peace with all the world, cheerful, laborious and conscientious, the type of the Puritan yeoman.

Of this motley company of pilgrims, I have spoken of the prioress, — a woman of high rank. In contrast with her is the wife of Bath, who travelled extensively, even to Jerusalem and

on her feet, indicating that she sat on her ambler like a man.

There are other characters which I cannot stop to mention, — the sailor, browned by the seas and sun, and full of stolen Bordeaux wine; the haberdasher; the carpenter; the weaver; the dyer; the tapestry-worker; the cook, to boil the chickens and the marrow-bones, and bake the pies and tarts, — mostly people from the middle and lower ranks of society, whose clothes are gaudy, manners rough, and language coarse. But all classes and trades and professions seem to be represented, except nobles, bishops, and abbots, — dignitaries whom, perhaps, Chaucer is reluctant to describe and caricature.

To beguile the time on the journey to Canterbury, all these various pilgrims are required to tell some story peculiar to their separate walks of life; and it is these stories which afford the best description we have of the manners and customs of the fourteenth century, as well as of its leading sentiments and ideas.

The knight was required to tell his story first, and it naturally was one of love and adventure. Although the scene of it was laid in ancient Greece, it delineates the institution of chivalry and the manners and sentiments it produced. No writer of that age, except perhaps Froissart, paints the connection of chivalry with the graces of the soul and the moral beauty which

city, discreet and true. But the wife of Bath is disgusting from her coarse talk and coarser manners. Her tale is to show what a woman likes best, which, according to her, is to bear rule over her husband and household. The prioress is conventional and weak, aping courtly manners. The wife of the host of the Tabard inn is a vixen and shrew, who calls her husband a milk-sop, and is so formidable with both her tongue and her hands that he is glad to make his escape from her whenever he can. The pretty wife of the carpenter, gentle and slender, with her white apron and open dress, is anything but intellectual, — a mere sensual beauty. Most of these women are innocent of tooth-brushes, and give and receive thrashings, and sing songs without a fastidious taste, and beat their servants and nag their husbands. But they are good cooks, and understand the arts of brewing and baking and roasting and preserving and pickling, as well as of spinning and knitting and embroidering. They are supreme in their households; they keep the keys and lock up the wine. They are gossiping, and love to receive their female visitors. They do not do much shopping, for shops were very primitive, with but few things to sell. Their knowledge is very limited, and confined to domestic matters. They are on the whole modest, but are the victims of friars and pedlers. They have more liberty than we should naturally suppose, but have not yet

are free with their tongues ; they give and do not spare reproaches in language ; times we should not call particularly choice all fond of dress, and wear gay colors, with regard to artistic effect.

In regard to the sports and amusements, we learn much from Chaucer. In England of his day was merry ; that is, the noisy and rough in their enjoyments. The frequent ringing of the bells ; there were the huntsman and the excitements of the chase ; boisterous mirth in the village ale-house ; frequent holidays, and dances around May-poles ; adorned with ribbons and flowers and flags ; wandering minstrels and jesters and jugglers ; fightings and foot-ball and games at arms ; were wrestling matches and morris-dances ; baiting. But the exhilaration of the people was normal, like the merriment of negroes on a plantation, — a sort of rebound from mi-

which workmen were doomed; for when they could be impressed by the king's architect and paid whatever he chose to give them, there could not have been much real contentment, which is generally placid and calm. There is one thing in which all classes delighted in the fourteenth century, and that was a garden, in which flowers bloomed, — things of beauty which were as highly valued as the useful. Moreover, there was a zest in rural sports now seldom seen, especially among the upper classes who could afford to hunt and fish. There was no excitement more delightful to gentlemen and ladies than that of hawking, and it infinitely surpassed in interest any rural sport whatever in our day, under any circumstances. Hawks trained to do the work of fowling-pieces were therefore greater pets than any dogs that now are the company of sportsmen. A lady without a falcon on her wrist, when mounted on her richly caparisoned steed for a morning's sport, was very rare indeed.

An instructive feature of the "Canterbury Tales" is the view which Chaucer gives us of the food and houses and dresses of the people. "In the Nonne's Prestes' Tale we see the cottage and manner of life of a poor widow." She has three daughters, three pigs, three oxen, and a sheep. Her house had only two rooms, — an eating-room, which also served for a kitchen and sitting-room, and a bower or bedchamber, — both with-

out a chimney, with holes pierced to let in the light. The table was a board put upon trestles, to be removed when the meal of black bread and milk, and perchance an egg with bacon, was over. The three slept without sheets or blankets on a rude bed, covered only with their ordinary day-clothes. Their kitchen utensils were a brass pot or two for boiling, a few wooden platters, an iron candlestick, and a knife or two; while the furniture was composed of two or three chairs and stools, with a frame in the wall, with shelves, for clothes and utensils. The manciple and the cook of the company seem to indicate that living among the well-to-do classes was a very generous and a very serious part of life, on which a high estimate was placed, since food in any variety, though plentiful at times, was not always to be had, and therefore precarious. "Guests at table were paired, and ate, every pair, out of the same plate or off the same trencher." But the bill of fare at a franklin's feast would be deemed anything but poor, even in our times, — "bacon and pea-soup, oysters, fish, stewed beef, chickens, capons, roast goose, pig, veal, lamb, kid, pigeon, with custard, apples and pears, cheese and spiced cakes." All these with abundance of wine and ale.

The "Canterbury Tales" remind us of the vast preponderance of the country over town and city life. Chaucer, like Shakspeare, revels in the simple glories

of nature, which he describes like a man feeling it to be a joy to be near to "Mother Earth," with her rich bounties. The birds that usher in the day, the flowers which beautify the lawn, the green hills and vales, with ever-changing hues like the clouds and the skies, yet fruitful in wheat and grass; the domestic animals, so mute and patient, the bracing air of approaching winter, the genial breezes of the spring, — all these does the poet sing with charming simplicity and grace, yea, in melodious numbers; for nothing is more marvellous than the music and rhythm of his lines, although they are not enriched with learned allusions or much moral wisdom, and do not march in the stately and majestic measure of Shakspeare or of Milton.

But the most interesting and instructive of the "Canterbury Tales" are those which relate to the religious life, the morals, the superstitions, and ecclesiastical abuses of the times. In these we see the need of the reformation of which Wyclif was the morning light. In these we see the hypocrisies and sensualities of both monks and friars, relieved somewhat by the virtues of the simple parish priest or poor parson, in contrast with the wealth and luxury of the regular clergy, as monks were called, in their princely monasteries, where the lordly abbot vied with both baron and bishop in the magnificence of his ordinary life. We see before us the Mediæval clergy in all their privileges, and yet in

all their ignorance and superstition, shielded from the punishment of crime and the operation of all ordinary laws (a sturdy defiance of the temporal powers), the agents and ministers of a foreign power, armed with the terrors of hell and the grave. Besides the prioress and the nuns' priest, we see in living light the habits and pretensions of the lazy monk, the venal friar and pardoner, and the noisy summoner for ecclesiastical offences: hunters and gluttons are they, with greyhounds and furs, greasy and fat, and full of dalliances; at home in taverns, unprincipled but agreeable vagabonds, who cheat and rob the people, and make a mockery of what is most sacred on the earth. These privileged mendicants, with their relics and indulgences, their arts and their lies, and the scandals they create, are treated by Chaucer with blended humor and severity, showing a mind as enlightened as that of the great scholar at Oxford, who heads the movement against Rome and the abuses at which she connived if she did not encourage. And there is something intensely English in his disgust and scorn,—brave for his day, yet shielded by the great duke who was at once his protector and friend, as he was of Wyclif himself,—in his severer denunciation, and advocacy of doctrines which neither Chaucer nor the Duke of Lancaster understood, and which, if they had, they would not have sympathized with nor encouraged. In these attacks on ecclesiastics and ecclesiastical abuses,

Chaucer should be studied with Wyclif and the early reformers, although he would not have gone so far as they, and led, unlike them, a worldly life. Thus by these poems he has rendered a service to his country, outside his literary legacy, which has always been held in value. The father of English poetry belonged to the school of progress and of inquiry, like his great contemporaries on the Continent. But while he paints the manners, customs, and characters of the fourteenth century, he does not throw light on the great ideas which agitated or enslaved the age. He is too real and practical for that. He describes the outward, not the inner life. He was not serious enough — I doubt if he was learned enough — to enter into the disquisitions of schoolmen, or the mazes of the scholastic philosophy, or the meditations of almost inspired sages. It is not the joys of heaven or the terrors of hell on which he discourses, but of men and women as they lived around him, in their daily habits and occupations. We must go to Wyclif if we would know the theological or philosophical doctrines which interested the learned. Chaucer only tells how monks and friars lived, not how they speculated or preached. We see enough, however, to feel that he was emancipated from the ideas of the Middle Ages, and had cast off their gloom, their superstition, and their despair. The only things he liked of those dreary times were their courts of love and their chivalric glories.

I do not propose to analyze the poetry of Chaucer, or enter upon a critical inquiry as to his relative merits in comparison with the other great poets. It is sufficient for me to know that critics place him very high as an original poet, although it is admitted that he drew much of his material from French and Italian authors. He was, for his day, a great linguist. He had travelled extensively, and could speak Latin, French, and Italian with fluency. He knew Petrarch and other eminent Italians. One is amazed that in such an age he could have written so well, for he had no great models to help him in his own language. If occasionally indecent, he is not corrupting. He never deliberately disseminates moral poison; and when he speaks of love, he treats almost solely of the simple and genuine emotions of the heart.

The best criticism that I have read of Chaucer's poetry is that of Adolphus William Ward; although as a biography it is not so full or so interesting as that of Godwin or even Morley. In no life that I have read are the mental characteristics of our poet so ably drawn, — "his practical good sense," his love of books, his still deeper love of nature, his naïveté, the readiness of his description, the brightness of his imagery, the easy flow of his diction, the vividness with which he describes character; his inventiveness, his readiness of illustration, his musical rhythm, his gayety and cheer-

fulness, his vivacity and joyousness, his pathos and tenderness, his keen sense of the ridiculous and power of satire, without being bitter, so that his wit and fun are harmless, and perpetually pleasing.

He doubtless had great dramatic talent, but he did not live in a dramatic age. His especial excellence, never surpassed, was his power of observing and drawing character, united with boundless humor and cheerful fun. And his descriptions of nature are as true and unstinted as his descriptions of men and women, so that he is as fresh as the month of May. In his poetry is life; and hence his immortal fame. He is not so great as Spenser or Shakspeare or Milton; but he has the same vitality as they, and is as wonderful as they considering his age and opportunities, — a poet who constantly improved as he advanced in life, and whose greatest work was written in his old age.

Unfortunately, we know but little of Chaucer's habits and experiences, his trials and disappointments, his friendships or his hatreds. What we do know of him raises our esteem. Though convivial, he was temperate; though genial, he was a silent observer, quiet in his manners, modest in his intercourse with the world, walking with downcast eye, but letting nothing escape his notice. He believed in friendship, and kept his friends to the end, and was stained neither by envy nor by pride, — as frank as he was affectionate, as gentle

XXVII.

CHRISTOPHER COLUMBUS.

MARITIME DISCOVERIES.

ABOUT thirteen hundred years ago, when Attila the Hun, called "the scourge of God," was overrunning the falling empire of the Romans, some of the noblest citizens of the small cities of the Adriatic fled, with their families and effects, to the inaccessible marshes and islands at the extremity of that sea, and formed a permanent settlement. They became fishermen and small traders. In process of time they united their islands together by bridges, and laid the foundation of a mercantile state. Thither resorted the merchants of Mediæval Europe to make exchanges. Thus Venice became rich and powerful, and in the twelfth century it was one of the prosperous states of Europe, ruled by an oligarchy of the leading merchants.

Contemporaneous with Dante, one of the most distinguished citizens of this mercantile mart, Marco Polo, impelled by the curiosity which reviving commerce excited and the restless adventure of a crusading age,

through the Indian Ocean, up the Per-
thence through Bagdad and Constanti-
with him immense wealth in precious s
Eastern commodities. The report of hi
ventures interested all Europe, for he v
have found the Tarshish of the Scriptu
gold and spices which had enriched t
chants in the time of Solomon, — me
some to have sailed around the Cape of
their three years' voyages. Among the v
which Polo had seen was a city on an
coast of China, which was represented
hundred thousand families, so rich that
its nobles were covered with plates of
that odoriferous plants and flowers di-
grateful perfumes, so strong that even
querors of China could not subdue it
known now as Japan, was called Ci
supposed to be inexhaustible in riches,

represented the royal palace to be more than six miles in circumference, occupied by three hundred thousand men.

In an awakening age of enterprise, when chivalry had not passed away, nor the credulity of the Middle Ages, the reports of this Cipango inflamed the imagination of Europe, and to reach it became at once the desire and the problem of adventurers and merchants. But how could this El Dorado be reached? Not by sailing round Africa; for to sail South, in popular estimation, was to encounter torrid suns with ever increasing heat, and suffocating vapors, and unknown dangers. The scientific world had lost the knowledge of what even the ancients knew. Nobody surmised that there was a Cape of Good Hope which could be doubled, and would open the way to the Indian Ocean and its islands of spices and gold. Nor could this Cipango be reached by crossing the Eastern Continent, for the journey was full of perils, dangers, and insurmountable obstacles.

Among those who meditated on this geographical mystery was a young sea captain of Genoa, who had studied in the University of Pavia, but spent his early life upon the waves,—intelligent, enterprising, visionary, yet practical, with boundless ambition, not to conquer kingdoms, but to discover new realms. Born probably in 1436, in the year 1470 he married the

his active mind seized upon the most interesting
of the day. His studies and experience convinced
that the Cipango of Marco Polo could be reached
sailing directly west. He knew that the earth was
round, and he inferred from the plants and animals
and even human bodies that had occasionally come
from the West, that there must be unknown lands
on the western coasts of the Atlantic, and that the
ocean, never yet crossed, was the common highway
of both Europe and Asia ; in short, that the East
could be reached by sailing west. And he knew that
the thing to be practicable, for the magnetic needle
had been discovered, or brought from China by
Polo, which always pointed to the North, and that
mariners could sail in the darkest night by the aid of
another instrument had been made, the astrolabe, or
modern quadrant, by which latitude could be ascertained
sured. He supposed that after sailing eight hundred
leagues, by the aid of compass and such charts as he had collected

This was not an absurd speculation to a man of the intellect and knowledge of Columbus. To his mind there were but few physical difficulties if he only had the ships, and the men bold enough to embark with him, and the patronage which was necessary for so novel and daring an enterprise. The difficulties to be surmounted were not so much physical as moral. It was the surmounting of moral difficulties which gives to Columbus his true greatness as a man of genius and resources. These moral obstacles were so vast as to be all but insurmountable, since he had to contend with all the established ideas of his age, — the superstitions of sailors, the prejudices of learned men, and general geographical ignorance. He himself had neither money, nor ships, nor powerful friends. Nobody believed in him; all ridiculed him; some insulted him. Who would furnish money to a man who was supposed to be half crazy, — certainly visionary and wild; a rash adventurer who would not only absorb money but imperil life? Learned men would not listen to him, and powerful people derided him, and princes were too absorbed in wars and pleasure to give him a helping hand. Aid could come only from some great state or wealthy prince; but both states and princes were deaf and dumb to him. It was a most extraordinary inspiration of genius in the fifteenth century which created, not an opinion, but a conviction that Asia could be reached by sailing west;

:

and how were common minds to comprehend such a novel idea? If a century later, with all the blaze of reviving art and science and learning, the most learned people ridiculed the idea that the earth revolved around the sun, even when it was proved by all the certitudes of mathematical demonstration and unerring observations, how could the prejudiced and narrow-minded priests of the time of Columbus, who controlled the most important affairs of state, be made to comprehend that an unknown ocean, full of terrors, could be crossed by frail ships, and that even a successful voyage would open marts of inexhaustible wealth? All was clear enough to this scientific and enterprising mariner; and the inward assurance that he was right in his calculation gave to his character a blended boldness, arrogance, and dignity which was offensive to men of exalted station, and ill became a stranger and adventurer with a thread-bare coat, and everything which indicated poverty, neglect, and hardship, and without any visible means of living but by the making and selling of charts.

Hence we cannot wonder at the seventeen years of poverty, neglect, ridicule, disappointment, and deferred hopes, such as make the heart sick, which elapsed after Columbus was persuaded of the truth of his theory, before he could find anybody enlightened enough to believe in him, or powerful enough to assist him.

Wrapped up in those glorious visions which come only to a man of superlative genius, and which make him insensible to heat and cold and scanty fare, even to reproach and scorn, this intrepid soul, inspired by a great and original idea, wandered from city to city, and country to country, and court to court, to present the certain greatness and wealth of any state that would embark in his enterprise. But all were alike cynical, cold, unbelieving, and even insulting. He opposes overwhelming, universal, and overpowering ideas. To have surmounted these amid such protracted opposition and discouragement constitutes his greatness; and finally to prove his position by absolute experiment and hazardous enterprise makes him one of the greatest of human benefactors, whose fame will last through all the generations of men. And as I survey that lonely, abstracted, disappointed, and derided man, — poor and unimportant, so harassed by debt that his creditors seized even his maps and charts, obliged to fly from one country to another to escape imprisonment, without even listeners and still less friends, and yet with ever increasing faith in his cause, utterly unconquerable, alone in opposition to all the world, — I think I see the most persistent man of enterprise that I have read of in history. Critics ambitious to say something new may rake out slanders from the archives of enemies, and discover faults which derogate

from the character we have been taught to admire and venerate; they may even point out spots, which we cannot disprove, in that sun of glorious brightness, which shed its beneficent rays over a century of darkness,—but this we know, that, whatever may be the force of detraction, his fame has been steadily increasing, even on the admission of his slanderers, for three centuries, and that he now shines as a fixed star in the constellation of the great lights of modern times, not alone because he succeeded in crossing the ocean, when once embarked on it, but for surmounting the moral difficulties which lay in his way before he could embark upon it, and for being finally instrumental in conferring the greatest boon that our world has received from any mortal man, since Noah entered into the ark.

I think it is Lamartine who has said that truly immortal benefactors have seldom been able to accomplish their mission without the encouragement of either saints or women. This is emphatically true in the case of Columbus. The door to success was at last opened to him by a friendly and sympathetic friar of a Franciscan convent near the little port of Palos, in Andalusia. The sun-burned and disappointed adventurer (for that is what he was), wearied and hungry, and nearly discouraged, stopped at the convent-door to get a morsel of bread for his famished son, who attended him in his

pilgrimage. The prior of that obscure convent was the first who comprehended the man of genius, not so much because he was an enlightened scholar, but because his pious soul was full of kindly sympathy, showing that the instincts of love are kindred to the inspirations of genius. It was the voice of Ali and Cadijeh that strengthened Mohammed. It was Catherine von Bora who sustained Luther in his gigantic task. The worthy friar, struck by the noble bearing of a man so poor and wearied, became delighted with the conversation of his guest, who opened to him both his heart and his schemes, and forwarded his plans by a letter to a powerful ecclesiastic, who introduced him to the Spanish Court, then one of the most powerful, and certainly the proudest and most punctilious, in Europe. Ferdinand of Arragon was polite, yet wary and incredulous; but Isabella of Castile listened more kindly to the stranger, whom the greatness of his mission inspired with eloquence. Like the saint of the convent, she, and she alone of her splendid court, divined that there was something to be heeded in the words of Columbus, and gave her womanly and royal encouragement, although too much engrossed with the conquest of Grenada and the cares of her kingdom to pay that immediate attention which Columbus entreated.

I may not dwell on the vexatious delays and the protracted discouragements of Columbus after the Queen

had given her ear to his enthusiastic prophecies of the future glories of the kingdom. To the court and to the universities and to the great ecclesiastics he was still a visionary and a needy adventurer; and they quoted, in refutation of his theory, those Scripture texts which were hurled in greater wrath against Galileo when he announced his brilliant discoveries. There are, from some unfathomed reason, always texts found in the sacred writings which seem to conflict with both science and a profound theology; and the pedants, as well as the hypocrites and usurpers, have always shielded themselves behind these in their opposition to new opinions. I will not be hard upon them, for often they are good men, simply unable to throw off the shackles of ages of ignorance and tyranny. People should not be subjected to lasting reproach because they cannot emancipate themselves from prevailing ideas. If those prejudiced courtiers and scholastics who ridiculed Columbus could only have seen with his clearer insight, they might have loaded him with favors. But they were blinded and selfish and envious. Nor was it until Columbus convinced his sovereigns that the risk was small for so great a promised gain, that he was finally commissioned to undertake his voyage. The promised boon was the riches of Oriental countries, boundless and magnificent, — countries not to be discovered, but already known, only hard and perhaps impossible to reach. And

Columbus himself was so firmly persuaded of the existence of these riches, and of his ability to secure them, and they were so exaggerated by his imagination, that his own demands were extravagant and preposterous, as must have seemed to an incredulous court,—that he, a stranger, an adventurer, almost a beggar even, should in case of success be made viceroy and admiral over the unexplored realm, and with a tenth of all the riches he should collect or seize; and that these high offices — almost regal — should also be continued not only through his own life, but through the lives of his heirs from generation to generation, thus raising him to a possible rank higher than that of any of the dukes and grandees of Spain.

Ferdinand and Isabella, however, readily promised all that the persistent and enthusiastic adventurer demanded, doubtless with the feeling that there was not more than one chance in a hundred that he would ever be heard from again, but that this one chance was well worth all and more than they expended, — a possibility of indefinite aggrandizement. To the eyes of Ferdinand there was a prospect — remote, indeed — of adding to the power of the Spanish monarchy; and it is probable that the pious Isabella contemplated also the conversion of the heathen to Christianity. It is possible that some motives may have also influenced Columbus kindred to this,—a renewed crusade against Saracen infi-

dels, which he might undertake from the wealth he was so confident of securing. But the probabilities are that Columbus was urged on to his career by ambitious and worldly motives chiefly, or else he would not have been so greedy to secure honors and wealth, nor would have been so jealous of his dignity when he had attained power. To me Columbus was no more a saint than Sir Francis Drake was when he so unscrupulously robbed every ship he could lay his hands upon, although both of them observed the outward forms of religious worship peculiar to their respective creeds and education. There were no unbelievers in that age. Both Catholics and Protestants, like the ancient Pharisees, were scrupulous in what were supposed to be religious duties, — though these too often were divorced from morality. It is Columbus only as an intrepid, enthusiastic, enlightened navigator, in pursuit of a new world of boundless wealth, that I can see him; and it was for his ultimate success in discovering this world, amid so many difficulties, that he is to be regarded as a great benefactor, of the glory of which no ingenuity or malice can rob him.

At last he sets sail, August 3, 1492, and, singularly enough, from Palo, within sight of the little convent where he had received his first encouragement. He embarked in three small vessels, the largest of which was less than one hundred tons, and two without decks,

but having high poops and sterns inclosed. What an insignificant flotilla for such a voyage! But it would seem that the Admiral, with great sagacity, deemed small vessels best adapted to his purpose, in order to enter safely shallow harbors and sail near the coast.

He sails in the most propitious season of the year, and is aided by steady trade-winds which waft his ships gently through the unknown ocean. He meets with no obstacles of any account. The skies are serene, the sea is as smooth as the waters of an inland lake; and he is comforted, as he advances to the west, by the appearance of strange birds and weeds and plants that indicate nearness to the land. He has only two objects of solicitude,—the variations of the magnetic needle, and the superstitious fears of his men; the last he succeeds in allaying by inventing plausible theories, and by concealing the real distance he has traversed. He encourages them by inflaming their cupidity. He is nearly baffled by their mutinous spirit. He is in danger, not from coral reefs and whirlpools and sunken rocks and tempests, as at first was feared, but from his men themselves, who clamor to return. It is his faith and moral courage and fertility of resources which we most admire. Days pass in alternate hope and disappointment, amid angry clamors, in great anxiety, for no land appears after he has sailed far beyond the points where he expected to find it. The world is

larger than even he has supposed. He promises great rewards to the one who shall first see the unknown shores. It is said that he himself was the first to discover land by observing a flickering light, which is exceedingly improbable, as he was several leagues from shore; but certain it is, that the very night the land was seen from the Admiral's vessel, it was also discovered by one of the seamen on board another ship. The problem of the age was at last solved. A new continent was given to Ferdinand and Isabella.

On the 12th of October Columbus lands — not, however, on the continent, as he supposed, but on an island — in great pomp, as admiral of the seas and viceroy of the king, in a purple doublet, and with a drawn sword in one hand and the standard of Spain in the other, followed by officers in appropriate costume, and a friar bearing the emblem of our redemption, which is solemnly planted on the shore, and the land called San Salvador. This little island, one of the Bahamas, is not, however, gilded with the anticipated splendors of Oriental countries. He finds neither gold, nor jewels, nor silks, nor spices, nor any signs of civilization; only naked men and women, without any indication of wealth or culture or power. But he finds a soft and genial climate, and a soil of unparalleled fertility, and trees and shrubs as green as Andalusia in spring, and birds with every variety of plumage, and insects

glistening with every color of the rainbow; while the natives are gentle and unsuspecting and full of worship. Columbus is disappointed, but not discouraged. He sets sail to find the real Cipango of which he is in search. He cruises among the Bahama islands, discovers Cuba and Hispaniola (now called Hayti), explores their coasts, holds peaceful intercourse with the natives, and is transported with enthusiasm in view of the beauty of the country and its great capacities; but he sees no gold, only a few ornaments to show that there is gold somewhere near, if it only could be found. Nor has he reached the Cipango of his dreams, but new countries, of which there was no record or suspicion of existence, yet of vast extent, and fertile beyond knowledge. He is puzzled, but filled with intoxicating joy. He has performed a great feat. He has doubtless added indefinitely to the dominion of Spain.

Columbus leaves a small colony on the island of Hispaniola, and with the trophies of his discoveries returns to Spain, without serious obstacles, except a short detention in Portugal, whither he was driven by a storm. His stories fill the whole civilized world with wonder. He is welcomed with the most cordial and enthusiastic reception; the people gaze at him with admiration. His sovereigns rise at his approach, and seat him beside themselves on their gilded and canopied throne; he has made them a present worthy of a god. What honors

could be too great for such a man! Even envy pales before the universal exhilaration. He enters into the most august circles as an equal; his dignities and honors are confirmed; he is loaded with presents and favors; he is the most marked personage in Europe; he is almost stifled with the incense of royal and popular idolatry. Never was a subject more honored and caressed. The imagination of a chivalrous and lively people is inflamed with the wildest expectations, for although he returned with but little of the expected wealth, he has pointed out a land rich in unfathomed mines.

A second and larger expedition is soon projected. Everybody wishes to join it. All press to join the fortunate admiral who has added a continent to civilization. The proudest nobles, with the armor and horses of chivalry, embark with artisans and miners for another voyage, now without solicitude or fear, but with unbounded hopes of wealth, — especially hardy adventurers and broken-down families of rank anxious to retrieve their fortunes. The pendulum of a nation's thought swings from the extreme of doubt and cynicism to the opposite extreme of faith and exhilaration. Spain was ripe for the harvest. Eight hundred years' desperate contest with the Moors had made the nation bold, heroic, adventurous. There were no such warriors in all Europe. Nowhere were there such chivalric vir-

.

tues. No people were then animated with such martial enthusiasm, such unfettered imagination, such heroic daring, as were the subjects of Ferdinand and Isabella. They were a people to conquer a world; not merely heroic and enterprising, but fresh with religious enthusiasm. They had expelled the infidels from Spain; they would fight for the honor of the Cross in any clime or land.

The hopes held out by Columbus were extravagant; and these extravagant expectations were the occasion of his fall and subsequent sorrows and humiliation. Doubtless he was sincere, but he was infatuated. He could only see the gold of Cipango. He was as confident of enriching his followers as he had been of discovering new realms. He was as enthusiastic as Sir Walter Raleigh a century later, and made promises as rash as he, and created the same exalted hopes, to be followed by bitter disappointments; and consequently he incurred the same hostilities and met the same downfall.

This second expedition was undertaken in seventeen vessels, carrying fifteen hundred people, all full of animation and hope, and some of them with intentions to settle in the newly discovered country until they had made their fortunes. They arrived at Hispaniola in March, of the year 1493, only to discover that the men left behind on the first voyage to secure their settlement

were all despoiled or murdered; that the natives had proved treacherous, or that the Spaniards had abused their confidence and forfeited their friendship. They were exposed to new hostilities: they found the climate unhealthy; their numbers rapidly dwindled away from disease or poor food; starvation stared them in the face, in spite of the fertility of the soil; dissensions and jealousies arose; they were governed with great difficulty, for the haughty hidalgos were unused to menial labor, and labor of the most irksome kind was necessary; law and order were relaxed. The blame of disaster was laid upon the Admiral, who was accused of deceiving them; evil reports were sent to Spain, accusing him of incapacity, cruelty, and oppression; gold was found only in small quantities; some of the leading men mutinied; general discontent arose; the greater part of the colonists were disabled from sickness and debility; no gold of any amount was sent back to Spain, only five hundred Indian slaves to be sold instead, which led to renewed hostilities with the natives, and the necessity for their subjugation. All of these evils created bitter disappointment in Spain and discontent with the measures and government of Columbus himself, so that a commission of inquiry was sent to Hispaniola, headed by Aguado, who assumed arrogant authority, and made it necessary for Columbus to return to Spain without adding essentially to his discoveries. He sailed around

Cuba and Jamaica and other islands, but as yet had not seen the mainland or found mines of gold or silver.

He landed in Spain, in 1496, to find that his popularity had declined and the old enthusiasm had grown cold. With him landed a feeble train of emaciated men, who had nothing to relate but sickness, hardship, and disappointment. The sovereigns, however, received him kindly; but he was depressed and sad, and clothed himself with the habit of a Franciscan friar, to denote his humility and dejection. He displayed a few golden collars and bracelets as trophies, with some Indians; but these no longer dazzled the crowd.

It was not until 1498 that Columbus was enabled to make his third voyage, having experienced great delay from the general disappointment. Instead of seventeen vessels, he could collect but six. In this voyage he reached the mainland,—that part called Paria, near the mouth of the Orinoco, in South America, but he supposed it to be an island. It was fruitful and populous, and the air was sweetened with the perfumes of flowers. Yet he did not explore the coast to any extent, but made his way to Hispaniola, where he had left the discontented colony, himself broken in health, a victim of gout, haggard from anxiety, and emaciated by pain. His splendid constitution was now undermined from his various hardships and cares.

He found the colony in a worse state than when he

left it under the care of his brother Bartholomew. The Indians had proved hostile; the colonists were lazy and turbulent; mutiny had broken out; factions prevailed, as well as general misery and discontent. The horrors of famine had succeeded wars with the natives. There was a general desire to leave the settlement. Columbus tried to restore order and confidence; but the difficulty of governing such a disorderly set of adventurers was too great even for him. He was obliged to resort to severities that made him more and more unpopular. The complaints of his enemies reached Spain. He was most cruelly misrepresented and slandered; and in the general disappointment, and the constant drain upon the mother country to support the colony, his enemies gained the ear of his sovereigns, and strong doubts arose in their minds about his capacity for government. So a royal commission was sent out,—an officer named Bovadilla, with absolute power to examine into the state of the colony, and supplant, if necessary, the authority of Columbus. The result was the arrest of Columbus and his brothers, who were sent to Spain in chains. What a change of fortune! I will not detail the accusations against him, just or unjust. It is mournful enough to see the old man brought home in irons from the world he had discovered and given to Spain. The injustice and cruelty which he received produced a reaction, and he was once more kindly

received at court, with the promise that his grievances should be redressed and his property and dignities restored.

Columbus was allowed to make one more voyage of discovery, but nothing came of it except renewed troubles, hardships, dangers, and difficulties; wars with the natives, perils of the sea, discontents, disappointments; and when at last he returned to Spain, in 1504, — broken with age and infirmities, after twelve years of harassing cares, labors, and dangers (a checkered career of glory and suffering), — nothing remained but to prepare for his final rest. He had not made a fortune; he had not enriched his patrons, — but he had discovered a continent. His last days were spent in disquieting and fruitless negotiations to perpetuate his honors among his descendants. He was ever jealous and tenacious of his dignities. Ferdinand was polite, but selfish and cold; nor can this calculating prince ever be vindicated from the stain of gross ingratitude. Columbus died in the year 1506, at the age of seventy, a disappointed man. But honors were ultimately bestowed upon his heirs, who became grandees and dukes, and intermarried with the proudest families of Spain; and it is also said that Ferdinand himself, after the death of the great navigator, caused a monument to be erected to his memory with this inscription: "To Castile and Leon Columbus gave a new world." But no man

of that century needed less than Columbus a monument to perpetuate his immortal fame.

I think that historians belittle Columbus when they would excite our pity for his misfortunes. They insult the dignity of all struggling souls, and make utilitarians of all benefactors, and give false views of success. Few benefactors, on the whole, were ever more richly rewarded than he. He died Admiral of the Seas, a grandee of Spain,—having bishops for his eulogists and princes for his mourners,—the founder of an illustrious house, whose name and memory gave glory even to the Spanish throne. And even if he had not been rewarded with material gains, it was enough to feel that he had conferred a benefit on the world which could scarcely be appreciated in his lifetime,—a benefit so transcendent that its results could be seen only by future generations. Who could adequately pay him for his services; who could estimate the value of his gift? What though they load him to-day with honors, or cast him to-morrow into chains?—that is the fate of all immortal benefactors since our world began. His great soul should have soared beyond vulgar rewards. In the loftiness of his self-consciousness he should have accepted, without a murmur, whatever fortune awaited him. Had he merely given to civilization a new style of buttons, or an improved envelope, or a punch for a railway conductor, or a spring for a carriage, or a mining

tool, or a screw, or revolver, or reaper, the inventors of which have "seen millions in them," and been cheated out of his gains, he might have whimpered over his wrongs. How few benefactors have received even as much as he; for he won dignities, admiration, and undying fame. We scarcely know the names of many who have made grand bequests. Who invented the mariner's compass? Who gave the lyre to primeval ages, or the blacksmith's forge, or the letters of the alphabet, or the arch in architecture, or glass for windows? Who solved the first problem of geometry? Who first sang the odes which Homer incorporated with the Iliad? Who first turned up the earth with a plow? Who first used the weaver's shuttle? Who devised the cathedrals of the Middle Ages? Who gave the keel to ships? Who was the first that raised bread by yeast? Who invented chimneys? But all ages will know that Columbus discovered America; and his monuments are in every land, and his greatness is painted by the ablest historians.

But I will not enlarge on the rewards Columbus received, or the ingratitude which succeeded them, by force of envy or from the disappointment of worldly men in not realizing all the gold that he promised. Let me allude to the results of his discovery.

The first we notice was the marvellous stimulus to maritime adventures. Europe was inflamed with a

desire to extend geographical knowledge, or add new countries to the realms of European sovereigns.

Within four years of the discovery of the West India Islands by Columbus, Cabot had sailed past Newfoundland, and Vasco da Gama had doubled the Cape of Good Hope, and laid the foundation of the Portuguese empire in the East Indies. In 1499 Ojeda, one of the companions of Columbus, and Amerigo Vespucci discovered Brazil. In 1500 Corte Real, a Portuguese, explored the Gulf of St. Lawrence. In 1505 Francesco de Almeida established factories along the coast of Malabar. In 1510 the Spaniards formed settlements on the mainland at Panama. In 1511 the Portuguese established themselves at Malacca. In 1513 Balboa crossed the Isthmus of Darien and reached the Pacific Ocean. The year after that, Ponce de Leon had visited Florida. In 1515 the Rio de la Plata was navigated; and in 1517 the Portuguese had begun to trade with China and Bengal. As early as 1520 Cortes had taken Mexico, and completed the conquest of that rich country the following year. In 1522 Cano circumnavigated the globe. In 1524 Pizarro discovered Peru, which in less than twelve years was completely subjugated,—the year when California was discovered by Cortes. In 1542 the Portuguese were admitted to trade with Japan. In 1576 Frobisher sought a North-western passage to India; and the following year Sir Francis

Drake commenced his more famous voyages under the auspices of Elizabeth. In 1578 Sir Humphrey Gilbert colonized Virginia, followed rapidly by other English settlements, until before the century closed the whole continent was colonized either by Spaniards, or Portuguese, or English, or French, or Dutch. All countries came in to share the prizes held out by the discovery of the New World.

Colonization followed the voyages of discovery. It was animated by the hope of finding gold and precious stones. It was carried on under great discouragements and hardships and unforeseen difficulties. As a general thing, the colonists were not accustomed to manual labor; they were adventurers and broken-down dependents on great families, who found restraint irksome and the drudgeries of their new life almost unendurable. Nor did they intend, at the outset, permanent settlements; they expected to accumulate gold and silver, and then return to their country. They had sought to improve their condition, and their condition became forlorn. They were exposed to sickness from malaria, poor food, and hardship; they were molested by the natives whom they constantly provoked; they were subject to cruel treatment on the part of royal governors. They melted away wherever they settled, by famine, disease, and war, whether in South or North America. They were discontented and disap-

to return. — doomed to remain where they die. Colonization had no dignity until in the New World for religious liberty, or to the soil. The conquest of Mexico and ever, opened up the mining of gold and s were finally found in great abundance. At richness of these countries in the precious finally established, then a regular stream c flocked to the American shores. Gold was a but not until thousands had miserably peri

The mines of Mexico and Peru undoubted Spain, and filled Europe with envy and em stream of gold flowed to the mother coun caravels which transported the treasures world became objects of plunder to all nat to Spain. The seas were full of pirates. Drake was an undoubted pirate, and return long voyage around the world, with immen which he had stolen. Then followed, wit search after gold and silver a rapid de

accumulation of wealth by Spain led to luxury, arrogance, and idleness, followed by degeneracy and decay, since those virtues on which the strength of man is based are weakened by sudden wealth. Industry declined in proportion as Spain became enriched by the precious metals. But this inquiry is foreign to my object.

A still more interesting inquiry arises, how far the nations of Europe were really enriched by the rapid accumulation of gold and silver. The search for the precious metals may have stimulated commercial enterprise, but it is not so clear that it added to the substantial wealth of Europe, except so far as it promoted industry. Gold is not wealth; it is simply the exponent of wealth. Real wealth is in farms and shops and ships,—in the various channels of industry, in the results of human labor. So far as the precious metals enter into useful manufactures, or into articles of beauty and taste, they are indeed inherently valuable. Mirrors, plate, jewelry, watches, gilded furniture, the adornments of the person, in an important sense, constitute wealth, since all nations value them, and will pay for them as they do for corn or oil. So far as they are connected with art, they are valuable in the same sense as statues and pictures, on which labor has been expended. There is something useful, and even necessary, besides food and raiment and houses. The

gold which ornamented Solomon's temple, or the Minerva of Phidias, or the garments of Leo X., had a value. The ring which is a present to brides is a part of a marriage ceremony. The golden watch, which never tarnishes, is more valuable inherently than a pewter one, because it remains beautiful. Thus when gold enters into ornaments deemed indispensable, or into manufactures which are needed, it has an inherent value,—it is wealth.

But when gold is a mere medium of exchange,—its chief use,—then it has only a conventional value; I mean, it does not make a nation rich or poor, since the rarer it is the more it will purchase of the necessities of life. A pound's weight of gold, in ancient Greece, or in Mediæval Europe, would purchase as much wheat as twenty pounds' weight will purchase to-day. If the mines of Mexico or Peru or California had never been worked, the gold in the civilized world three hundred years ago would have been as valuable for banking purposes, or as an exchange for agricultural products, as twenty times its present quantity, since it would have bought as much as twenty times the quantity will buy to-day. Make diamonds as plenty as crystals, they would be worth no more than crystals, if they were not harder and more beautiful. Make gold as plenty as silver, it would be worth no more than silver, except for manufacturing purposes; it would be worth no

more to bankers and merchants. The vast increase in the production of the precious metals simply increased the value of the commodities for which they were exchanged. A laborer can purchase no more bread with a dollar to-day than he could with five cents three hundred years ago. Five cents were really as much wealth three hundred years ago as a dollar is to-day. Wherein, then, has the increase in the precious metals added to the wealth of the world, if a twentieth part of the gold and silver now in circulation would buy as much land, or furniture, or wheat, or oil three hundred years ago as the whole amount now used as money will buy to-day? Had no gold or silver mines been discovered in America, the gold and silver would have appreciated in value in proportion to the wear of them. In other words, the scarcer the gold and silver the more the same will purchase of the fruits of human industry. So industry is the wealth, not the gold. It is the cultivated farms and the manufactures and the buildings and the internal improvements of a country which constitute its real wealth, since these represent its industry, — the labor of men. Mines, indeed, employ the labor of men, but they do not furnish food for the body, or raiment to wear, or houses to live in, or fuel for cooking, or any purpose whatever of human comfort or necessity, — only a material for ornament; which I grant is wealth, so far as ornament is for the

welfare of man. The marbles of ancient Greece were very valuable for the labor expended on them, either for architecture or for ornament.

Gold and silver were early selected as useful and convenient articles for exchange, like bank-notes, and so far have inherent value as they supply that necessity; but if a quarter part of the gold and silver in existence would supply that necessity, the remaining three-fourths are as inherently valueless as the paper on which bank-notes are printed. Their value consists in what they represent of the labors and industries of men.

Now Spain ultimately became poor, in spite of the influx of gold and silver from the American mines, because industries of all kinds declined. People were diverted from useful callings by the mighty delusion which gold discoveries created. These discoveries had the same effect on industry, which is the wealth of nations, as the support of standing armies has in our day. They diverted men from legitimate callings. The miners had to be supported like soldiers; and, worse, the sudden influx of gold and silver intoxicated men and stimulated speculation. An army of speculators do not enrich a nation, since they rob each other. They cause money to change hands; they do not stimulate industry. They do not create wealth; they simply make it flow from one person to another.

But speculations sometimes create activity in enterprise; they inflame desires for wealth, and cause people to make greater exertions. In that sense the discovery of American mines gave a stimulus to commerce and travel and energy. People rushed to America for gold: these people had to be fed and clothed. Then farmers and manufacturers followed the gold-hunters: they tilled the soil to feed the miners. The new farms which dotted the region of the gold-diggers added to the wealth of the country in which the mines were located. Colonization followed gold-digging. But it was America that became enriched, not the old countries from which the miners came, except so far as the old countries furnished tools and ships and fabrics, for doubtless commerce and manufacturing were stimulated. So far, the wealth of the world increased; but the men who returned to riot in luxury and idleness did not stimulate enterprise. They made others idle also. The necessity of labor was lost sight of.

And yet if one country became idle, another country may have become industrious. There can be but little question that the discovery of the American mines gave commerce and manufactures and agriculture, on the whole, a stimulus. This was particularly seen in England. England grew rich from industry and enterprise, as Spain became poor from idleness and luxury. The silver and gold, diffused throughout Europe, ulti-

mately found their way into the pockets of Englishmen, who made a market for their manufactures. It was not alone the precious metals which enriched England, but the will and power to produce those articles of industry for which the rest of the world parted with their gold and silver. What has made France rich since the Revolution? Those innumerable articles of taste and elegance—fabrics and wines—for which all Europe parted with their specie; not war, not conquest, not mines. Why till recently was Germany so poor? Because it had so little to sell to other nations; because industry was cramped by standing armies and despotic governments.

One thing is certain, that the discovery of America opened a new field for industry and enterprise to all the discontented and impoverished and oppressed Europeans who emigrated. At first they emigrated to dig silver and gold. The opening of mines required labor, and miners were obliged to part with their gold for the necessaries of life. Thus California in our day has become peopled with farmers and merchants and manufacturers, as well as miners. Many came to America expecting to find gold, and were disappointed, and were obliged to turn agriculturists, as in Virginia. Many came to New England from political and religious motives. But all came to better their fortunes. Gradually the United States and Canada became populated

from east to west and from north to south. The surplus population of Europe poured itself into the wilds of America. Generally the emigrants were farmers. With the growth of agricultural industry were developed commerce and manufactures. Thus, materially, the world was immensely benefited. A new continent was opened for industry. No matter what the form of government may be, — I might almost say no matter what the morals and religion of the people may be, — so long as there is land to occupy, and to be sold cheap, the continent will fill up, and will be as densely populated as Europe or Asia, because the natural advantages are good. The rivers and the lakes will be navigated; the products of the country will be exchanged for European and Asiatic products; wealth will certainly increase, and increase indefinitely. There is no calculating the future resources and wealth of the New World, especially in the United States. There are no conceivable bounds to their future commerce, manufactures, and agricultural products. We can predict with certainty the rise of new cities, villas, palaces, material splendor, limited only to the increasing resources and population of the country. Who can tell the number of miles of new railroads yet to be made; the new inventions to abridge human labor; what great empires are destined to rise; what unknown forms of luxury will be found out; what

—those great centres of wealth and power? What remains of Roman greatness even, except in laws and literature and renovated statues? Remember there is an undeviating uniformity in the past history of nations. What is the simple story of all the ages?—industry, wealth, corruption, decay, and ruin. What conservative power has been strong enough to arrest the ruin of the nations of antiquity? Have not material forces and glories been developed and exhibited, whatever the religion and morals of the fallen nations? Cannot a country grow materially to a certain point, under the most adverse influences, in a religious and moral point of view? Yet for lack of religion and morals the nations perished, and their Babel-towers were buried in the dust. They perished for lack of true conservative forces; at least that is the judgment of historians. Nobody doubts the splendor of the material glories of the ancient nations. The ruins of Baalbec, of Palmyra, of Athens, prove this, to say nothing of history. The material glories of the ancient nations may be surpassed by our modern wonders; but yet all the material glories of the ancient nations passed away.

Now if this is to be the destiny of America, — an unbounded material growth, followed by corruption and ruin, — then Columbus has simply extended the realm for men to try material experiments. Make New York

a second Carthage, and Boston a second Athens, and Philadelphia a second Antioch, and Washington a second Rome, and we simply repeat the old experiments. Did not the Romans have nearly all we have, materially, except our modern scientific inventions?

But has America no higher destiny than to repeat the old experiments, and improve upon them, and become rich and powerful? Has she no higher and nobler mission? Can she lay hold of forces that the Old World never had, such as will prevent the uniform doom of nations? I maintain that there is no reason that can be urged, based on history and experience, why she should escape the fate of the nations of antiquity, unless new forces arise on this continent different from what the world has known, and which have a conservative influence. If America has a great mission to declare and to fulfil, she must put forth altogether new forces, and these not material. And these alone will save her and save the world. It is mournful to contemplate even the future magnificent material glories of America if these are not to be preserved, if these are to share the fate of ancient wonders. It is obvious that the real glory of America is to be something entirely different from that of which the ancients boasted. And this is to be moral and spiritual, — that which the ancients lacked.

This leads me to speak of the moral consequences

of the discovery of America,—infinitely grander than any material wonders, of which the world has been full, of which every form of paganism has boasted, which nearly everywhere has perished, and which must necessarily perish everywhere, without new forces to preserve them.

In a moral point of view scarcely anything good immediately resulted, at least to Europe, by the discovery of America. It excited the wildest spirit of adventure, the most unscrupulous cupidity, the most demoralizing speculation. It created jealousies and wars. The cruelties and injustices inflicted on the Indians were revolting. Nothing in the annals of the world exceeds the wickedness of the Spaniards in the conquest of Peru and Mexico. That conquest is the most dismal and least glorious in human history. We see in it no poetry, or heroism, or necessity; we read of nothing but its crimes. The Jesuits, in their missionary zeal, partly redeemed the cruelties; but they soon imposed a despotic yoke, and made their religion pay. Monopolies scandalously increased, and the New World was regarded only as spoil. The tone of moral feeling was lowered everywhere, for the nations were crazed with the hope of sudden accumulations. Spain became enervated and demoralized.

On America itself the demoralization was even more marked. There never was such a state of moral degra-

melted away!

And then, to add to the moral evils
nization, was the introduction of Afri-
pecially in the West Indies and the
of North America. Christendom seen
the sense of morality. Slavery more t
ances all other advantages together. I
of the seventeenth and eighteenth
merely slaves, but the slave-trade, incre

.....

arose new forms of social and political life. Such men were those who colonized New England. And, say what you will, in spite of all the disagreeable sides of the Puritan character, it was the Puritans who gave a new impulse to civilization in its higher sense. They founded schools and colleges and churches. They introduced a new form of political life by their town-meetings, in which liberty was nurtured, and all local improvements were regulated. It was the autonomy of towns on which the political structure of New England rested. In them was born that true representative government which has gradually spread towards the West. The colonies were embryo States,—States afterwards to be bound together by a stronger tie than that of a league. The New England States, after the war of Independence, were the defenders and advocates of a federal and central power. An entirely new political organization was gradually formed, resting equally on such pillars as independent townships and independent States, and these represented by delegates in a national centre.

So we believe America was discovered, not so much to furnish a field for indefinite material expansion, with European arts and fashions,—which would simply assimilate America to the Old World, with all its dangers and vices and follies,—but to introduce new forms of government, new social institutions, new customs and manners, new experiments in liberty, new religious

imposed. America is a new field in which experiments in government and social life, tried in the older nations without successful revolutions; and new institutions have become our pride and boast, and which are the admiration of Europe. America is the only country under the sun in which there is self-government which purely represents the people, where universal suffrage is not a mere form, if America has a destiny to fulfil for other nations, it must give them something more valuable than mere machines, palaces, cars, and horse railways; it must give, not only machinery to abridge labour, but new notions and ideas to expand the mind and enlarge the heart—something by which the poor can enjoy their rights. Unless something is developed in America which cannot be developed in other countries, which will create new spiritual and intellectual forces, which will have a conservative influence, then I cannot see how long America can continue to be the centre of the world.

Unless something new is born here which has a peculiar power to save, wherein will America ultimately differ from other parts of Christendom? We must have schools in which the heart as well as the brain is educated, and newspapers which aspire to something higher than to fan prejudices and appeal to perverted tastes. Our hope is not in books which teach infidelity under the name of science, nor in pulpits which cannot be sustained without sensational oratory, nor in journals which trade on the religious sentiments of the people, nor in Sabbath-school books which are an insult to the human understanding, nor in colleges which fit youth merely for making money, nor in schools of technology to give an impulse to material interests, nor in legislatures controlled by monopolists, nor in judges elected by demagogues, nor in philanthropic societies to ventilate unpractical theories. These will neither renovate nor conserve what is most precious in life. Unless a nation grows morally as well as materially, there is something wrong at the core of society. As I have said, no material expansion will avail, if society becomes rotten at the core. America is a glorious boon to civilization, but only as she fulfils a new mission in history, — not to become more potent in material forces, but in those spiritual agencies which prevent corruption and decay. An infidel professor, calling himself a savant, may tell you that there is nothing certain or great but

which degrade society, here as everywhere
Bunker Hills and Plymouth Rocks, and
declamations of politicians and philanthropists
the advance in useful mechanisms, I
tempted to propound inquiries which
mournful story of the decline and ruin of
Empires. I ask myself, Why should there be
exception to the uniform fate of nations
demonstrated? Why should not good
be perverted here, as in all other countries
the world? Where has civilization shown
triumphs, except in inventions to abridge
mankind and make men comfortable
there nothing before us, then, but the
material life, to end as mournfully as that
of antiquity? If so, then Christianity is
a failure, is a defeated power, like all
religion which failed to save. But is it
we really swinging back to Paganism?
be hailed when all religions will be con-

tined to live like brutes or butterflies, and pass away into the infinity of time and space, like inert matter, decomposed, absorbed, and entering into new and everlasting combinations? Is America to become like Europe and Asia in all essential elements of life? Has she no other mission than to add to perishable glories? Is she to teach the world nothing new in education and philanthropy and government? Are all her struggles in behalf of liberty in vain?

We all know that Christianity is the only hope of the world. The question is, whether America is or is not more favorable for its healthy developments and applications than the other countries of Christendom are. We believe that it is. If it is not, then America is only a new field for the spread and triumph of material forces. If it is, we may look forward to such improvements in education, in political institutions, in social life, in religious organizations, in philanthropical enterprise, that the country will be sought by the poor and enslaved classes of Europe more for its moral and intellectual advantages than for its mines or farms; the objects of the Puritan settlers will be gained, and the grandeur of the discovery of a New World will be established.

“ What sought they thus afar?

Bright jewels of the mine?

The wealth of seas, — the spoils of war?

They sought for Faith's pure shrine.

SAVONAROLA.

UNSUCCESSFUL REFORMS.

A. D. 1452-1498.

XXVIII.

SAVONAROLA.

UNSUCCESSFUL REFORMS.

THIS Lecture is intended to set forth a memorable movement in the Roman Catholic Church,—a reformation of morals, preceding the greater movement of Luther to produce a reformation of both morals and doctrines. As the representative of this movement I take Savonarola, concerning whom much has of late been written; more, I think, because he was a Florentine in a remarkable age,—the age of artists and of reviving literature,—than because he was a martyr, battling with evils which no one man was capable of removing. His life was more a protest than a victory. He was an unsuccessful reformer, and yet he prepared the way for that religious revival which afterward took place in the Catholic Church itself. His spirit was not revolutionary, like that of the Saxon monk, and yet it was progressive. His soul was in active sympathy with every emancipating idea of his age. He was the incarnation of a fervid, living, active piety amid forms and formu-

tend not a spiritual but temporal dominion scandalized the highest position in the Church as attested by all reliable historians, whether Catholic or Protestant. However infallible the Catholic claims to be, it has never been denied that the highest dignitaries have been subject to reproaches, both in their character and their position. Such men were Sixtus IV., Julius II., and Leo X.,—able, probably, for it is very seldom that popes have not been distinguished for some qualities, nevertheless, who were a disgrace to the position they had succeeded in reaching.

The great feature of that age was the revival of classical learning and artistic triumphs in sculpture, painting, and architecture, blended with infidel religious opinions and social corruptions, so that it is both interesting and instructive. It is interesting for its triumphs of arms, for the dispersion of the shadows of the Middle Ages, for the commencement of great enterprises and of a re-

duty and self-restraint were alike ignored. Cruel tyrants reigned in cities, and rapacious priests fattened on the credulity of the people. Think of monks itinerating Europe to sell indulgences for sin ; of monasteries and convents filled, not with sublime enthusiasts as in earlier times, but with gluttons and sensualists, living in concubinage and greedy of the very things which primitive monasticism denounced and abhorred ! Think of boys elevated to episcopal thrones, and the sons of popes made cardinals and princes ! Think of churches desecrated by spectacles which were demoralizing, and a worship of saints and images which had become idolatrous, — a degrading superstition among the people, an infidel apathy among the higher classes : not infidel speculations, for these were reserved for more enlightened times, but an indifference to what is ennobling, to all vital religion, worthy of the Sophists in the time of Socrates !

It was in this age of religious apathy and scandalous vices, yet of awakening intelligence and artistic glories, when the greatest enthusiasm was manifested for the revived literature and sculptured marbles of classic Greece and Rome, that Savonarola appeared in Florence as a reformer and preacher and statesman, near the close of the fifteenth century, when Columbus was seeking a western passage to India ; when Michael Angelo was moulding the “ Battle of Hercules with the

was the flattered patron of both scholars and the city over which he ruled with so nificance was the most attractive place next to that other city on the banks of whose wonders and glories have never been and will probably survive the revolutions of empires.

But Savonarola was not a native of Florence. He was born in the year 1452 at Ferrara, in a good family, and received an expensive education, being destined to the profession of medicine. He was a sad, solitary, pensive, but precocious youth, whose youth was marked by an unfortunate love affair with a haughty Florentine girl. He dedicated his memory and labor to her a life-labor, but became very dejected and very pious. He assumed, of course, the ascetic type, for scarcely any other in that age, and he entered a Dominican convent, as Luther, a few years later

.

few men can go counter to prevailing ideas! It takes a prodigious genius, and a fearless, inquiring mind, to break away from their bondage. Abraham could renounce the idolatries which surrounded him, when called by a supernatural voice; Paul could give up the Phariseeism which reigned in the Jewish schools and synagogues, when stricken blind by the hand of God; Luther could break away from monastic rules and papal denunciation, when taught by the Bible the true ground of justification,—but Savonarola could not. He pursued the path to heaven in the beaten track, after the fashion of Jerome and Bernard and Thomas Aquinas, after the style of the Middle Ages, and was sincere, devout, and lofty, like the saints of the fifth century, and read his Bible as they did, and essayed a high religious life; but he was stern, gloomy, and austere, emaciated by fasts and self-denial. He had, however, those passive virtues which Mediæval piety ever enjoined,—yea, which Christ himself preached upon the Mount, and which Protestantism, in the arrogance of reason, is in danger of losing sight of,—humility, submission, and contempt of material gains. He won the admiration of his superiors for his attainments and his piety, being equally versed in Aristotle and the Holy Scriptures. He delighted most in the Old Testament heroes and prophets, and caught their sternness and invective.

ago he began to preach in Ferrara and Ferrara was not very successful. His sermons attracted but little interest, and he sometimes preached to as few as twenty-five people. Probably he was too vehement to suit the fastidious ears of the nobility in Italy. People will not ordinarily bestow honor on preachers, however gifted, until they have earned a reputation; they prefer pretty and easy things to the sayings of young men with nothing but platitudes and commonplaces to utter. Savonarola seems to have been discouraged and humiliated at his failure, and was obliged to go and preach to the rustic villagers, amid the mountains near Sienna. Among these people he probably felt at home; and he gave vent to the fire within him, and astonished and triumphed all who heard him, winning even the admiration of the celebrated Prince of Mirandola. From that time his fame spread rapidly, he was recalled to Florence, 1490, and his great career commenced. The following year such crowds pressed to hear him that he was obliged to preach in the church of St. Mark connected with the

ers, — more moved than delighted. So great was his popularity, that his influence correspondingly increased and he was chosen prior of his famous convent.

He now wielded power as well as influence, and became the most marked man of the city. He was not only the most eloquent preacher in Italy, probably in the world, but his eloquence was marked by boldness, earnestness, almost fierceness. Like an ancient prophet, he was terrible in his denunciation of vices. He spared no one, and he feared no one. He resembled Chrysostom at Constantinople, when he denounced the vanity of Eudoxia and the venality of Eutropius. Lorenzo de Medici, the absolute lord of Florence, sent for him, and expostulated and remonstrated with the unsparing preacher, — all to no effect. And when the usurper of his country's liberties was dying, the preacher was again sent for, this time to grant an absolution. But Savonarola would grant no absolution unless Lorenzo would restore the liberties which he and his family had taken away. The dying tyrant was not prepared to accede to so haughty a demand, and, collecting his strength, rolled over on his bed without saying a word, and the austere monk wended his way back to his convent, unmolested and determined.

The premature death of this magnificent prince made a great sensation throughout Italy, and produced a change in the politics of Florence, for the people

an overwhelming pride. Savonarola took to the people, and fanned the discontents. He became the recognized leader of opposition to the Medici, who virtually ruled the city.

The Prior of St. Mark now appeared in light, — as a political leader and as a popular reformer. Let us first consider him in his secular aspect as a revolutionist and statesman, — for the administration he had a principal hand in framing raised him to the dignity of statesman rather than politician. If his cause had not been good, and if he had not appealed to both enlightened and patriotic sentiments, he would have been a demagogue; for a demagogue and a mere politician are synonymous, and a clerical demagogue is hideous.

Savonarola began his political career with denunciations, from his cathedral pulpit, of the political evils of his day, not merely in Florence but throughout Italy. He detested tyrants and

testation of the tyranny of the Medici, and his zeal to recover for the Florentines their lost liberties, he even hailed the French armies of Charles VIII. as deliverers, although they had crossed the Alps to invade and conquer Italy. If the gates of Florence were open to them, they would expel the Medici. So he stimulated the people to league with foreign enemies in order to recover their liberties. This would have been high treason in Richelieu's time,—as when the Huguenots encouraged the invasion of the English on the soil of France. Savonarola was a zealot, and carried the same spirit into politics that he did into religion,—such as when he made a bonfire of what he called vanities. He had an end to carry: he would use any means. There is apt to be a spirit of Jesuitism in all men consumed with zeal, determined on success. To the eye of the Florentine reformer, the expulsion of the Medici seemed the supremest necessity; and if it could be done in no other way than by opening the gates of his city to the French invaders, he would open the gates. Whatever he commanded from the pulpit was done by the people, for he seemed to have supreme control over them, gained by his eloquence as a preacher. But he did not abuse his power. When the Medici were expelled, he prevented violence; blood did not flow in the streets; order and law were preserved. The people looked up to him as their leader, temporal as well as spiritual.

So he assembled them in the great hall of the city, where they formally held a *parlamento*, and reinstated the ancient magistrates. But these were men without experience. They had no capacity to govern, and they were selected without wisdom on the part of the people. The people, in fact, had not the ability to select their best and wisest men for rulers. That is an evil inherent in all popular governments. Does San Francisco or New York send its greatest men to Congress? Do not our cities elect such rulers as the demagogues point out? Do not the few rule, even in a Congregational church? If some commanding genius, unscrupulous or wise or eloquent or full of tricks, controls elections with us, much more easily could such a man as Savonarola rule in Florence, where there were no political organizations, no caucuses, no wire-pullers, no other man of commanding ability. The only opinion-maker was this preacher, who indicated the general policy to be pursued. He left elections to the people; and when these proved a failure, a new constitution became a necessity. But where were the men capable of framing a constitution for the republic? Two generations of political slavery had destroyed political experience. The citizens were as incapable of framing a new constitution as the legislators of France after they had decimated the nobility, confiscated the Church lands, and cut off the head of the king. The

lawyers disputed in the town hall, but accomplished nothing.

Their science amounted only to an analysis of human passion. All wanted a government entirely free from tyranny; all expected impossibilities. Some were in favor of a Venetian aristocracy, and others of a pure democracy; yet none would yield to compromise, without which no permanent political institution can ever be framed. How could the inexperienced citizens of Florence comprehend the complicated relations of governments? To make a constitution that the world respects requires the highest maturity of human wisdom. It is the supremest labor of great men. It took the ablest man ever born among the Jews to give to them a national polity. The Roman constitution was the fruit of five hundred years' experience. Our constitution was made by the wisest, most dignified, most enlightened body of statesmen that this country has yet seen, and even they could not have made it without great mutual concessions. No *one* man could have made a constitution, however great his talents and experience, — not even a Jefferson or a Hamilton, — which the nation would have accepted. It would have been as full of defects as the legislation of Solon or Lycurgus or the Abbé Sieyès. But one man gave a constitution to the Florentines, which they not only accepted, but which has been generally admired for its wisdom; and that

all citizens who had intelligence, experience, and position, — not all the people, but such as had been magistrates, or their fathers before them. Accordingly, a grand council was formed of three thousand citizens, out of a population of ninety thousand who had reached the age of twenty-nine. These three thousand citizens were divided into three equal bodies, each of which should constitute a council for six months and no meeting was legal unless two thirds of the members were present. This grand council appointed the magistrates. But another council was also recommended and adopted, of only eighty citizens not under forty years of age, — picked men, to be changed every six months, whom the magistrates were bound to consult weekly, and to whom was confided the appointment of some of the higher officers of the State, like ambassadors to neighboring States. All laws proposed by the magistrates, or seignior, had to be ratified by this higher and selector council. The higher council was a sort of Senate, the lower council were more like Representatives. But there was no universal suffrage. The clerical legislator knew well enough that only the better and more intelligent part of the people were fit to vote, even in the election of magistrates. He seems to have foreseen the fatal rock on which all popular institutions are in danger of being wrecked, — that no government is safe and respected when the people who make it are ignorant and

lawless. So the constitution which Savonarola gave was neither aristocratic nor democratic. It resembled that of Venice more than that of Athens, that of England more than that of the United States. Strictly universal suffrage is a Utopian dream wherever a majority of the people are wicked and degraded. Sooner or later it threatens to plunge any nation, as nations now are, into a whirlpool of dangers, even if Divine Providence may not permit a nation to be stranded and wrecked altogether. In the politics of Savonarola we see great wisdom, and yet great sympathy for freedom. He would give the people all that they were fit for. He would make all offices elective, but only by the suffrages of the better part of the people.

But the Prior of St. Mark did not confine himself to constitutional questions and issues alone. He would remove all political abuses; he would tax property, and put an end to forced loans and arbitrary imposts; he would bring about a general pacification, and grant a general amnesty for political offences; he would guard against the extortions of the rich, and the usury of the Jews, who lent money at thirty-three per cent, with compound interest; he secured the establishment of a bank for charitable loans; he sought to make the people good citizens, and to advance their temporal as well as spiritual interests. All his reforms, political or social, were advocated, however, from the pulpit; so

that he was doubtless a political priest. We, in this country and in these times, have no very great liking to this union of spiritual and temporal authority: we would separate and divide this authority. Protestants would make the functions of the ruler and the priest forever distinct. But at that time the popes themselves were secular rulers, as well as spiritual dignitaries. All bishops and abbots had the charge of political interests. Courts of law were presided over by priests. Priests were ambassadors to foreign powers; they were ministers of kings; they had the control of innumerable secular affairs, now intrusted to laymen. So their interference with politics did not shock the people of Florence, or the opinions of the age. It was indeed imperatively called for, since the clergy were the most learned and influential men of those times, even in affairs of state. I doubt if the Catholic Church has ever abrogated or ignored her old right to meddle in the politics of a state or nation. I do not know, but apprehend, that the Catholic clergy even in this country take it upon themselves to instruct the people in their political duties. No enlightened Protestant congregation would endure this interference. No Protestant minister dares ever to discuss direct political issues from the pulpit, except perhaps on Thanksgiving Day, or in some rare exigency in public affairs. Still less would he venture to tell his parishioners how they

should vote in town-meetings. In imitation of ancient saints and apostles, he is wisely constrained from interference in secular and political affairs. But in the Middle Ages, and the Catholic Church, the priest could be political in his preaching, since many of his duties were secular. Savonarola usurped no prerogatives. He refrained from meeting men in secular vocations. Even in his politics he confined himself to his sphere in the pulpit. He did not attend the public debates; he simply preached. He ruled by wisdom, eloquence, and sanctity; and as he was an oracle, his utterances became a law.

But while he instructed the people in political duties, he paid far more attention to public morals. He would break up luxury, extravagance, ostentatious living, unseemly dresses in the house of God. He was the foe of all levities, all frivolities, all insidious pleasures. Bad men found no favor in his eyes, and he exposed their hypocrisies and crimes. He denounced sin, in high places and low. He did not confine himself to the sins of his own people alone, but censured those of princes and of other cities. He embraced all Italy in his glance. He invoked the Lord to take the Church out of the hands of the Devil, to pour out his wrath on guilty cities. He throws down a gauntlet of defiance to all corrupt potentates; he predicts the near approach of calamities; he foretells the certainty of divine judg-

ment upon all sin; he clothes himself with the thunders of the Jewish prophets; he seems to invoke woe, desolation, and destruction. He ascribes the very invasion of the French to the justice of retribution. "Thy crimes, O Florence! thy crimes, O Rome! thy crimes, O Italy! are the causes of these chastisements." And so terrible are his denunciations that the whole city quakes with fear. Mirandola relates that as Savonarola's voice sounded like a clap of thunder in the cathedral, packed to its utmost capacity with the trembling people, a cold shiver ran through all his bones and the hairs of his head stood on end. "O Rome!" exclaimed the preacher, "thou shalt be put to the sword, since thou wilt not be converted. O Italy! confusion upon confusion shall overtake thee; the confusion of war shall follow thy sins, and famine and pestilence shall follow after war." Then he denounces Rome: "O harlot Church! thou hast made thy deformity apparent to all the world; thou hast multiplied thy fornications in Italy, in France, in Spain, in every country. Behold, saith the Lord, I will stretch forth my hand upon thee; I will deliver thee into the hands of those that hate thee." The burden of his soul is sin, — sin everywhere, even in the bosom of the Church, — and the necessity of repentance, of turning to the Lord. He is more than an Elijah, — he is a John the Baptist. His sermons are chiefly drawn from the Old Testament,

... the Pope is at the

susceptible of grand sentiments; and this man — venerated, austere, impassioned, like an ancient prophet, like one risen from the dead — denounces woes with such awful tones, such majestic fervor, such terrible emphasis, as to break through all apathy, all delusions, and fill the people with remorse, astonish them by his revelations, and make them really feel that the supernal powers, armed with the terrors of Omnipotence, would hurl them into hell unless they repented.

No man in Europe at the time had a more lively and impressive sense of the necessity of a general reformation than the monk of St. Mark; but it was a reform in morals, not of doctrine. He saw the evils of the day — yea, of the Church itself — with perfect clearness, and demanded redress. He is as sad in view of these acknowledged evils as Jeremiah was in view of the apostasy of the Jews; he is as austere in his own life as Elijah or John the Baptist was. He would not abolish monastic institutions, but he would reform the lives of the monks, — cure them of gluttony and sensuality, not shut up their monasteries. He would not rebel against the authority of the Pope, for even Savonarola supposed that prelate to be the successor of Saint Peter; but he would prevent the Pope's nepotism and luxury and worldly spirit, — make him once more a true "servant of the servants of God," even when clothed with the insignia of universal authority. He

would not give up auricular confession, or masses for the dead, or prayers to the Virgin Mary, for these were indorsed by venerated ages; but he would rebuke a priest if found in unseemly places. Whatever was a sin, when measured by the laws of immutable morality, he would denounce, whoever was guilty of it; whatever would elevate the public morals he would advocate, whoever opposed. His morality was measured by the declaration of Christ and the Apostles, not by the standard of a corrupt age. He revered the Scriptures, and incessantly pondered them, and exalted their authority, holding them to be the ultimate rule of holy living, the everlasting handbook of travellers to the heavenly Jerusalem. In all respects he was a good man,—a beautiful type of Christian piety, with fewer faults than Luther or Calvin had, and as great an enemy as they to corruptions in State and Church, which he denounced even more fiercely and passionately. Not even Erasmus pointed out the vices of the day with more freedom or earnestness. He covered up nothing; he shut his eyes to nothing.

The difference between Savonarola and Luther was that the Saxon reformer attacked the root of the corruption; not merely outward and tangible and patent sins which everybody knew, but also and more earnestly those false principles of theology and morals which sustained them, and which logically pushed out would

necessarily have produced them. For instance, he not merely attacked indulgences, then a crying evil, as peddled by Tetzel and others like him, and all to get money to support the temporal power of the popes or build St. Peter's church; but he would show that penance, on which indulgences are based, is antagonistic to the doctrine which Paul so forcibly expounded respecting the forgiveness of sins and the grounds of justification. And Luther saw that all the evils which good men lamented would continue so long as the false principles from which they logically sprung were the creed of the Church. So he directed his giant energies to reform doctrines rather than morals. His great idea of justification could be defended only by an appeal to the Scriptures, not to the authority of councils and learned men. So he made the Scriptures the sole source of theological doctrine. Savonarola also accepted the Scriptures, but Luther would put them in the hands of everybody, of peasants even,—and thus instituted private judgment, which is the basal pillar of Protestantism. The Catholic theologians never recognized this right in the sense that Luther understood it, and to which he was pushed by inexorable logic. The Church was to remain the interpreter of the doctrinal and disputed points of the Scriptures.

Savonarola was a churchman. He was not a fearless theological doctor, going wherever logic and the Bible

carried him. Hence, he did not stimulate thought and inquiry as Luther did, nor inaugurate a great revolutionary movement, which would gradually undermine papal authority and many institutions which the Catholic Church indorsed. Had he been a great genius, with his progressive proclivities, he might have headed a rebellion against papal authority, which upheld doctrines that logically supported the very evils he denounced. But he was contented to lop off branches; he did not dig up the roots. Luther went to the roots, as Calvin did; as Saint Augustine would have done had there been a necessity in his day, for the theology of Saint Augustine and Calvin is essentially the same. It was from Saint Augustine that Calvin drew his inspiration next after Saint Paul. But Savonarola cared very little for the discussion of doctrines; he probably hated all theological speculations, all metaphysical divinity. Yet there is a closer resemblance between doctrines and morals than most people are aware of. As a man thinketh, so is he. Hence, the reforms of Savonarola were temporary, and were not widely extended; for he did not kindle the intelligence of the age, as did Luther and those associated with him. There can be no great and lasting reform without an appeal to reason, without the assistance of logic, without conviction. The house that had been swept and garnished was re-entered by devils, and the last state

was worse than the first. To have effected a radical and lasting reform, Savonarola should have gone deeper. He should have exposed the foundations on which the superstructure of sin was built; he should have undermined them, and appealed to the reason of the world. He did no such thing. He simply rebuked the evils, which must needs be, so long as the root of them is left untouched. And so long as his influence remained, so long as his voice was listened to, he was mighty in the reforms at which he aimed,—a reformation of the morals of those to whom he preached. But when his voice was hushed, the evils he detested returned, since he had not created those convictions which bind men together in association; he had not fanned that spirit of inquiry which is hostile to ecclesiastical despotism, and which, logically projected, would subvert the papal throne. The reformation of Luther was a grand protest against spiritual tyranny. It not only aimed at a purer life, but it opposed the bondage of the Middle Ages, and all the superstitions and puerilities and fables which were born and nurtured in that dark and gloomy period and to which the clergy clung as a means of power or wealth. Luther called out the intellect of Germany, exalted liberty of conscience, and appealed to the dignity of reason. He showed the necessity of learning, in order to unravel and explain the truths of revelation. He made piety more

exalted by giving it an intelligent stimulus. He looked to the future rather than the past. He would make use, in his interpretation of the Bible, of all that literature, science, and art could contribute. Hence his writings had a wider influence than could be produced by the fascination of personal eloquence, on which Savonarola relied, but which Luther made only accessory.

Again, the sermons of the Florentine reformer do not impress us as they did those to whom they were addressed. They are not logical, nor doctrinal, nor learned,—not rich in thought, like the sermons of those divines whom the Reformation produced. They are vehement denunciations of sin; are eloquent appeals to the heart, to religious fears and hopes. He would indeed create faith in the world, not by the dissertations of Paul, but by the agonies of the dying Christ. He does not instruct; he does not reason. He is dogmatic and practical. He is too earnest to be metaphysical, or even theological. He takes it for granted that his hearers know all the truths necessary for salvation. He enforces the truths with which they are familiar, not those to be developed by reason and learning. He appeals, he urges, he threatens; he even prophesies; he dwells on divine wrath and judgment. He is an Isaiah foretelling what will happen, rather than a Peter at the Day of Pentecost.

Savonarola was transcendent in his oratorical gifts, the like of which has never before nor since been witnessed in Italy. He was a born orator; as vehement as Demosthenes, as passionate as Chrysostom, as electrical as Bernard. Nothing could withstand him; he was a torrent that bore everything before him. His voice was musical, his attitude commanding, his gestures superb. He was all alive with his subject. He was terribly in earnest, as if he believed everything he said, and that what he said were most momentous truths. He fastened his burning eyes upon his hearers, who listened with breathless attention, and inspired them with his sentiments; he made them feel that they were in the very jaws of destruction, and that there was no hope but in immediate repentance. His whole frame quivered with emotion, and he sat down utterly exhausted. His language was intense, not clothing new thoughts, but riveting old ideas,—the ideas of the Middle Ages; the fear of hell, the judgments of Almighty God. Who could resist such fiery earnestness, such a convulsed frame, such quivering tones, such burning eyes, such dreadful threatenings, such awful appeals? He was not artistic in the use of words and phrases like Bourdaloue, but he reached the conscience and the heart like Whitefield. He never sought to amuse; he would not stoop to any trifling. He told no stories; he made no witticisms; he used no tricks.

He fell back on truths, no matter whether his hearers relished them or not; no matter whether they were amused or not. He was the messenger of God urging men to flee as for their lives, like Lot when he escaped from Sodom.

Savonarola's manner was as effective as his matter. He was a kind of Peter the Hermit, preaching a crusade, arousing emotions and passions, and making everybody feel as he felt. It was life more than thought which marked his eloquence,—his voice as well as his ideas, his wonderful electricity, which every preacher must have, or he preaches to stones. It was himself, even more than his truths, which made people listen, admire, and quake. All real orators impress themselves—their own individuality—on their auditors. They are not actors, who represent other people, and whom we admire in proportion to their artistic skill in producing deception. These artists excite admiration, make us forget where we are and what we are, but kindle no permanent emotions, and teach no abiding lessons. The eloquent preacher of momentous truths and interests makes us realize them, in proportion as he feels them himself. They would fall dead upon us, if ever so grand, unless intensified by passion, fervor, sincerity, earnestness. Even a voice has power, when electrical, musical, impassioned, although it may utter platitudes. But when the impassioned voice rings with trumpet

notes through a vast audience, appealing to what is dearest to the human soul, lifting the mind to the contemplation of the sublimest truths and most momentous interests, then there is *real* eloquence, such as is never heard in the theatre, interested as spectators may be in the triumphs of dramatic art.

But I have dwelt too long on the characteristics of that eloquence which produced such a great effect on the people of Florence in the latter part of the fifteenth century. That ardent, intense, and lofty monk, world-deep like Dante, not world-wide like Shakspeare, who filled the cathedral church with eager listeners, was not destined to uninterrupted triumphs. His career was short; he could not even retain his influence. As the English people wearied of the yoke of a Puritan Protector, and hankered for their old pleasures, so the Florentines remembered the sports and spectacles and *fêtes* of the old Medicean rule. Savonarola had arrayed against himself the enemies of popular liberty, the patrons of demoralizing excitements, the partisans of the banished Medici, and even the friends and counsellors of the Pope. The dreadful denunciation of sin in high places was as offensive to the Pope as the exposure of a tyrannical usurpation was to the family of the old lords of Florence; and his enemies took counsel together, and schemed for his overthrow. If the irritating questions and mockeries of Socrates could not be endured at

the enthusiasm of Northern Germans. Yet the Florentine preacher boldly continued his attacks on all hypocritical religion, and on the vices of Rome, not as incidental to the system, but extraneous,—the faults of a man or age. The Pope became furious, to be thus balked by a Dominican monk, and in one of the cities of Italy,—a city that had not rebelled against his authority. He complained bitterly to the Florentine ambassador, of the haughty friar who rebuked and defied him. He summoned a consistory of fourteen eminent Dominican theologians, to inquire into his conduct and opinions, and issued a brief forbidding him to preach, under penalty of excommunication. Yet Savonarola continued to preach, and more violently than ever. He renewed his charges against Rome. He even called her a harlot Church, against whom heaven and earth, angels and devils, equally brought charges. The Pope then seized the old thunderbolts of the Gregories and the Clements, and excommunicated the daring monk and preacher, and threatened the like punishment on all who should befriend him. And yet Savonarola continued to preach. All Rome and Italy talked of the audacity of the man. And it was not until Florence itself was threatened with an interdict for shielding such a man, that the magistrates of the city were compelled to forbid his preaching.

The great orator mounted his pulpit March 18, 1498,

near four hundred years ago, and took an affectionate farewell of the people whom he had led, and appealed to Christ himself as the head of the Church. It was not till the preacher was silenced by the magistrates of his own city, that he seems to have rebelled against the papal authority; and then not so much against the authority of Rome as against the wicked shepherd himself, who had usurped the fold. He now writes letters to all the prominent kings and princes of Europe, to assemble a general council; for the general council of Constance had passed a resolution that the Pope must call a general council every ten years, and that, should he neglect to assemble it, the sovereign powers of the various states and empires were themselves empowered to collect the scattered members of the universal Church, to deliberate on its affairs. In his letters to the kings of France, England, Spain, and Hungary, and the Emperor of Germany, he denounced the Pope as simoniacal, as guilty of all the vices, as a disgrace to the station which he held. These letters seem to have been directed against the man, not against the system. He aimed at the Pope's ejection from office, rather than at the subversion of the office itself,—another mark of the difference between Savonarola and Luther, since the latter waged an uncompromising war against Rome herself, against the whole *régime* and government and institutions and dogmas of the Catholic Church; and that is the reason

why Catholics hate Luther so bitterly, and deny to him either virtues or graces, and represent even his death-bed as a scene of torment and despair, — an instance of that pursuing hatred which goes beyond the grave; like that of the zealots of the Revolution in France, who dug up the bones of the ancient kings from those vaults where they had reposed for centuries, and scattered their ashes to the winds.

Savonarola hoped the Christian world would come to his rescue; but his letters were intercepted, and reached the eye of Alexander VI., who now bent the whole force of the papal empire to destroy that bold reformer who had assailed his throne. And it seems that a change took place in Florence itself in popular sentiment. The Medicean party obtained the ascendancy in the government. The people — the fickle people — began to desert Savonarola; and especially when he refused to undergo the ordeal of fire, — one of the relics of Mediæval superstition, — the people felt that they had been cheated out of their amusement, for they had waited impatiently the whole day in the public square to see the spectacle. He finally consented to undergo the ordeal, provided he might carry the crucifix. To this his enemies would not consent. He then laid aside the crucifix, but insisted on entering the fire with the sacrament in his hand. His persecutors would not allow this either, and the ordeal did not take place.

At last his martyrdom approaches : he is led to prison. The magistrates of the city send to Rome for absolution for having allowed the Prior to preach. His enemies busy themselves in collecting evidence against him, — for what I know not, except that he had denounced corruption and sin, and had predicted woe. His two friends are imprisoned and interrogated with him, Fra Domenico da Pescia and Fra Silvestro Maruffi, who are willing to die for him. He and they are now subjected to most cruel tortures. As the result of bodily agony his mind begins to waver. His answers are incoherent ; he implores his tormentors to end his agonies ; he cries out, with a voice enough to melt a heart of stone, “Take, oh, take my life!” Yet he confessed nothing to criminate himself. What they wished him especially to confess was that he had pretended to be a prophet, since he had predicted calamities. But all men are prophets, in one sense, when they declare the certain penalties of sin, from which no one can escape, though he take the wings of the morning and fly to the uttermost parts of the sea.

Savonarola thus far had remained firm, but renewed examinations and fresh tortures took place. For a whole month his torments were continuous. In one day he was drawn up by a rope fourteen times, and then suddenly dropped, until all his muscles quivered with anguish. Had he been surrounded by loving

disciples, like Latimer at the burning pile, he might have summoned more strength; but alone, in a dark inquisitorial prison, subjected to increasing torture among bitter foes, he did not fully defend his visions and prophecies; and then his extorted confessions were diabolically altered. But that was all they could get out of him, — that he had prophesied. In all matters of faith he was sound. The inquisitors were obliged to bring their examination to an end. They could find no fault with him, and yet they were determined on his death. The Government of Florence consented to it and hastened it, for a Medici again held the highest office of the State.

Nothing remained to the imprisoned and tortured friar but to prepare for his execution. In his supreme trial he turned to the God in whom he believed. In the words of the dying Xavier, on the Island of San-cian, he exclaimed, “In te domine speravi, non confundar in eternum.” “O Lord,” he prays, “a thousand times hast thou wiped out my iniquity. I do not rely on my own justification, but on thy mercy.” His few remaining days in prison were passed in holy meditation.

At last the officers of the papal commission arrive. The tortures are renewed, and also the examinations, with the same result. No fault could be found with his doctrines. “But a dead enemy,” said they, “fights

no more." He is condemned to execution. The messengers of death arrive at his cell, and find him on his knees. He is overpowered by his sufferings and vigils, and can with difficulty be kept from sleep. But he arouses himself, and passes the night in prayer, and administers the elements of redemption to his doomed companions, and closes with this prayer: "Lord, I know thou art that perfect Trinity, — Father, Son, and Holy Ghost; I know that thou art the eternal Word; that thou didst descend from heaven into the bosom of Mary; that thou didst ascend upon the cross to shed thy blood for our sins. I pray thee that by that blood I may have remission for my sins." The simple faith of Paul, of Augustine, of Pascal! He then partook of the communion, and descended to the public square, while the crowd gazed silently and with trepidation, and was led with his companions to the first tribunal, where he was disrobed of his ecclesiastical dress. Then they were led to another tribunal, and delivered to the secular arm; then to another, where sentence of death was read; and then to the place of execution, — not a burning funeral pyre, but a scaffold, which mounting, composed, calm, absorbed, Savonarola submitted his neck to the hangman, in the forty-fifth year of his life: a martyr to the cause of Christ, not for an attack on the Church, or its doctrines, or its institutions, but for having denounced the corruption

and vices of those who ruled it, — for having preached against sin.

Thus died one of the greatest and best men of his age, one of the truest and purest whom the Catholic Church has produced in any age. He was stern, uncompromising, austere, but a reformer and a saint; a man who was merciful and generous in the possession of power; an enlightened statesman, a sound theologian, and a fearless preacher of that righteousness which exalteth a nation. He had no vices, no striking defects. He lived according to the rules of the convent he governed with the same wisdom that he governed a city, and he died in the faith of the primitive apostles. His piety was monastic, but his spirit was progressive, sympathizing with liberty, advocating public morality. He was unselfish, disinterested, and true to his Church, his conscience, and his cause, — a noble specimen both of a man and Christian, whose deeds and example form part of the inheritance of an admiring posterity. We pity his closing days, after such a career of power and influence; but we may as well compassionate Socrates or Paul. The greatest lights of the world have gone out in martyrdom, to be extinguished, however, only for a time, and then to loom up again in another age, and burn with inextinguishable brightness to remotest generations, as examples of the power of faith

and truth in this wicked and rebellious world,—a world to be finally redeemed by the labors and religion of just such men, whose days are days of sadness, protest, and suffering, and whose hours of triumph and exaltation are not like those of conquerors, nor like those whose eyes stand out with fatness, but few and far between. “I have loved righteousness, I have hated iniquity,” said the great champion of the Mediæval Church, “and therefore I die in exile.”

In ten years after this ignominious execution, Raphael painted the martyr among the sainted doctors of the Church in the halls of the Vatican, and future popes did justice to his memory, for he inaugurated that reform movement in the Catholic Church itself which took place within fifty years after his death. In one sense he was the precursor of Loyola, of Xavier, and of Aquaviva,—those illustrious men who headed the counter reformation; Jesuits, indeed, but ardent in piety, and enlightened by the spirit of a progressive age. “He was the first,” says Villari, “in the fifteenth century, to make men feel that a new light had awakened the human race; and thus he was a prophet of a new civilization,—the forerunner of Luther, of Bacon, of Descartes. Hence the drama of his life became, after his death, the drama of Europe. In the course of a single generation after Luther had declared his mission, the spirit of the Church of Rome underwent a change.

From the halls of the Vatican to the secluded hermitages of the Apennines this revival was felt. Instead of a Borgia there reigned a Caraffa." And it is remarkable that from the day that the counter reformation in the Catholic Church was headed by the early Jesuits, Protestantism gained no new victories, and in two centuries so far declined in piety and zeal that the cities which witnessed the noblest triumphs of Luther and Calvin were disgraced by a boasting rationalism, to be succeeded again in our times by an arrogance of scepticism which has had no parallel since the days of Democritus and Lucretius. "It was the desire of Savonarola that reason, religion, and liberty might meet in harmonious union, but he did not think a new system of religious doctrines was necessary."

The influence of such a man cannot pass away, and has not passed away, for it cannot be doubted that his views have been embraced by enlightened Catholics from his day to ours,—by such men as Pascal, Fénelon, and Lacordaire, and thousands like them, who prefer ritualism and auricular confession, and penance, monasticism, and an ecclesiastical monarch, and all the machinery of a complicated hierarchy, with all the evils growing out of papal domination, to rationalism, sectarian dissensions, irreverence, license, want of unity, want of government, and even dispensation from the marriage vow. Which is worse, the phys-

ical arm of the beast, or the maniac soul of a lying prophet? Which is worse, the superstition and narrowness which excludes the Bible from schools, or that unbounded toleration which smiles on those audacious infidels who cloak their cruel attacks on the faith of Christians with the name of a progressive civilization? —and so far advanced that one of these new lights, ignorant, perhaps, of everything except of the fossils and shells and bugs and gases of the hole he has bored in, assumes to know more of the mysteries of creation and the laws of the universe than Moses and David and Paul, and all the Bacons and Newtons that ever lived? Names are nothing; it is the spirit, the *animus*, which is everything. It is the soul which permeates a system, that I look at. It is the Devil from which I would flee, whatever be his name, and though he assume the form of an angel of light, or cunningly try to persuade me, and ingeniously argue, that there is no God. True and good Catholics and true and good Protestants have ever been united in one thing, — *in this belief*, that there is a God who made the heaven and the earth, and that there is a Christ who made atonement for the sins of the world. It is good morals, faith, and love to which both Catholics and Protestants are exhorted by the Apostles. When either Catholics or Protestants accept the one faith and the one Lord which Christianity alone reveals, then they equally belong to the grand army of

spiritual warriors under the banner of the Cross, though they may march under different generals and in different divisions; and they will receive the same consolations in this world, and the same rewards in the world to come.

MICHAEL ANGELO.

THE REVIVAL OF ART.

A. D. 1474-1563.

XXIX.

MICHAEL ANGELO.

THE REVIVAL OF ART.

MICHAEL ANGELO BUONAROTTI — one of the Great Lights of the new civilization — may stand as the most fitting representative of reviving art in Europe; also as an illustrious example of those virtues which dignify intellectual pre-eminence. He was superior, in all that is sterling and grand in character, to any man of his age, — certainly in Italy; exhibiting a rugged, stern greatness which reminds us of Dante, and of other great benefactors; nurtured in the school of sorrow and disappointment, leading a checkered life, doomed to envy, ingratitude, and neglect; rarely understood, and never fully appreciated even by those who employed and honored him. He was an isolated man; grave, abstracted, lonely, yet not unhappy, since his world was that of glorious and exalting ideas, even those of grace, beauty, majesty, and harmony, — the world which Plato lived in, and in which all great men live who seek to rise above the transient, the

false, and puerile in common life. He was also an original genius, remarkable in everything he attempted, whether as sculptor, painter, or architect, and even as poet. He saw the archetypes of everything beautiful and grand, which are invisible except to those who are almost divinely gifted; and he had the practical skill to embody them in permanent forms, so that all ages may study those forms, and rise through them to the realms in which his soul lived.

Michael Angelo not only created, but he reproduced. He reproduced the glories of Grecian and Roman art. He restored the old civilization in his pictures, his statues, and his grand edifices. He revived a taste for what is imperishable in antiquity. As such he is justly regarded as an immortal benefactor; for it is art which gives to nations culture, refinement, and the enjoyment of the beautiful. Art diverts the mind from low and commonplace pursuits, exalts the imagination, and makes its votary indifferent to the evils of life. It raises the soul into regions of peace and bliss.

But art is most ennobling when it is inspired by lofty and consecrated sentiments,—like those of religion, patriotism, and love. Now ancient art was consecrated to Paganism. Of course there were noble exceptions; but as a general rule temples were erected in honor of heathen deities. Statues represented mere physical

strength and beauty and grace. Pictures portrayed the charms of an unsanctified humanity. Hence ancient art did very little to arrest human degeneracy; facilitated rather than retarded the ruin of states and empires, since it did not stimulate the virtues on which the strength of man is based: it did not check those depraved tastes and habits which are based on egotism.

Now the restorers of ancient art cannot be said to have contributed to the moral elevation of the new races, unless they avoided the sensualism of Greece and Rome, and appealed purely to those eternal ideas which the human mind, even under Pagan influences, sometimes conceived, and which do not conflict with Christianity itself.

In considering the life and labors of Michael Angelo, then, we are to examine whether, in the classical glories of antiquity which he substituted for the Gothic and Mediæval, he advanced civilization in the noblest sense; and moreover, whether he carried art to a higher degree than was ever attained by the Greeks and Romans, and hence became a benefactor of the world.

In considering these points I shall not attempt a minute criticism of his works. I can only seize on the great outlines, the salient points of those productions which have given him immortality. No lecture can be exhaustive. If it only prove suggestive, it has reached its end.

those works will probably never be sur-
all the energies of a great nation were
upon their production, even as our own
itself chiefly to mechanical inventions a
research and speculation. What railroad
graphs and spindles and chemical test
pounds are to us; what philosophy of
Greeks; what government and jurisprudence
the Romans; what cathedrals and metaphysics
ties were to the Middle Ages; what the
quiries were to the divines of the seventeenth
what social urbanities and refinements of
French in the eighteenth century,—the first
to the Italians in the sixteenth century:
commonplace to dwell upon, and which we
ceded when we bear in mind that no age
distinguished for everything, and that nations
satisfactorily but one experiment at a time
not likely to repeat it with the same enthusiasm
the mind is unbounded in its capacities and

which successively appear, but in which only a certain limit has thus far been reached. Not in absolute perfection in any particular sphere is this progress seen, but rather in the variety of the experiments. It may be doubted whether any Grecian edifice will ever surpass the Parthenon in beauty of proportion or fitness of ornament; or any nude statue show grace of form more impressive than the Venus de Milo or the Apollo Belvidere; or any system of jurisprudence be more completely codified than that systematized by Justinian; or any Gothic church rival the lofty expression of Cologne cathedral; or any painting surpass the holy serenity and ethereal love depicted in Raphael's madonnas; or any court witness such a brilliant assemblage of wits and beauties as met at Versailles to render homage to Louis XIV.; or any theological discussion excite such a national interest as when Luther confronted Doctor Eck in the great hall of the Electoral Palace at Leipsic; or any theatrical excitement such as was produced on cultivated intellects when Garrick and Siddons represented the sublime conceptions of the myriad-minded Shakspeare. These glories may reappear, but never will they shine as they did before. No more Olympian games, no more Roman triumphs, no more Dodona oracles, no more Flavian amphitheatres, no more Mediæval cathedrals, no more councils of Nice or Trent, no more spectacles of kings holding the

stirrups of popes, no more Fields of the Cloth of Gold, no more reigns of court mistresses in such palaces as Versailles and Fontainebleau, — ah! I wish I could add, no more such battle-fields as Marengo and Waterloo, — only copies and imitations of these, and without the older charm. The world is moving on and perpetually changing, nor can we tell what new vanity will next arise, — vanity or glory, according to our varying notions of the dignity and destiny of man. We may predict that it will not be any mechanical improvement, for ere long the limit will be reached, — and it will be reached when the great mass cannot find work to do, for the everlasting destiny of man is toil and labor. But it will be some sublime wonders of which we cannot now conceive, and which in time will pass away for other wonders and novelties, until the great circle is completed; and all human experiments shall verify the moral wisdom of the eternal revelation. Then all that man has done, all that man can do, in his own boastful thought, will be seen, in the light of the celestial verities, to be indeed a vanity and a failure, not of human ingenuity and power, but to realize the happiness which is only promised as the result of supernatural, not mortal, strength, yet which the soul in its restless aspirations never ceases its efforts to secure, — everlasting Babel-building to reach the unattainable on earth.

Now the revival of art in Italy was one of the great movements in the series of human development. It peculiarly characterized the fifteenth and sixteenth centuries. It was an age of artistic wonders, of great creations.

Italy, especially, was glorious when Michael Angelo was born, 1474; when the rest of Europe was comparatively rude, and when no great works in art, in poetry, in history, or philosophy had yet appeared. He was descended from an illustrious family, and was destined to one of the learned professions; but he could not give up his mind to anything but drawing,—as annoying to his father as Galileo's experiments were to his parent; as unmeaning to him as Gibbon's History was to George III.,—"Scribble, scribble, scribble; Mr. Gibbon, I perceive, sir, you are always a-scribbling." No perception of a new power, no sympathy with the abandonment to a specialty not indorsed by fashions and traditions, but without which abandonment genius cannot easily be developed. At last the father yielded, and the son was apprenticed to a painter.—a degradation in the eyes of Mediæval aristocracy.

The celebrated Lorenzo de' Medici was then in the height of power and fame in Florence, adored by Roscoe as the patron of artists and poets, although he subverted the liberties of his country. This overlauded prince, heir of the fortunes of a great family of

merchants, wishing to establish a school for sculpture, filled a garden with statues, and freely admitted to it young scholars in art. Michael Angelo was one of the most frequent and enthusiastic visitors to this garden, where in due time he attracted the attention of the magnificent Lord of Florence by a head chiselled so remarkably that he became an inmate of the palace, sat at the table of Lorenzo, and at last was regularly adopted as one of the Prince's family, with every facility for prosecuting his studies. Before he was eighteen the youth had sculptured the battle of Hercules with the Centaurs, which he would never part with, and which still remains in his family; so well done that he himself, at the age of eighty, regretted that he had not given up his whole life to sculpture.

It was then as a sculptor that Michael Angelo first appears to the historical student, — about the year 1492, when Columbus was crossing the great unknown ocean to realize his belief in a western passage to India. Thus commercial enterprise began with the revival of art, and was destined never to be separated in its alliance with it, since commerce brings wealth, and wealth seeks to ornament the palaces and gardens which it has created or purchased. The sculptor's art was not born until piety had already edifices in which to worship God, or pride the monuments in which it sought the glories of a name; but it made rapid progress as wealth increased

and taste became refined ; as the need was felt for ornaments and symbols to adorn naked walls and empty spaces, especially statuary, grouped or single, of men or animals, — a marble history to interpret or reproduce consecrated associations. Churches might do without them ; the glass stained in every color of the rainbow, the altar shining with gold and silver and precious stones, the pillars multiplied and diversified, and rich in foliated circles, mullions, mouldings, groins, and bosses, and bearing aloft the arched and ponderous roof, — one scene of dazzling magnificence, — these could do without them ; but the palaces and halls and houses of the rich required the image of man, — and of man not emaciated and worn and monstrous, but of man as he appeared to the classical Greeks, in the perfection of form and physical beauty. So the artists who arose with the revival of commerce, with the multiplication of human wants and the study of antiquity, sought to restore the buried statues with the long-neglected literature and laws. It was in sculptured marbles that enthusiasm was most marked. These were found in abundance in various parts of Italy whenever the vast débris of the ancient magnificence was removed, and were universally admired and prized by popes, cardinals, and princes, and formed the nucleus of great museums.

The works of Michael Angelo as a sculptor were not

admired for three hundred years. In the other masterpieces, grandeur and majesty are characteristics. It may have been a reproach yet it is not a copy. He made character force the first consideration, and form subservient to expression. And here he differed, it is said by critics, from the ancients, who thought more of moral expression, — as may be seen in the faces of the Venus de Medici and the Apollo Belvedere, matchless and inimitable as these statues for grace and beauty. The Laocoön and the Dying Gaul are indeed exceptions, for it is character which constitutes their chief merit, — the expression of pain and agony. But there is almost no intellectual expression in the faces of other famous and antique statues, only beauty and variety of form, as Powers exhibited in his Greek Slave, — an excellence, since it is much easier to copy than in the nude statues which people Italy, than such intellectual expression.

artist retained the antique, he superadded a loftiness such as the ancients rarely produced; and sculpture became in his hands, not demoralizing and Pagan, resplendent in sensual charms, but instructive and exalting, — instructive for the marvellous display of anatomical knowledge, and exalting from grand conceptions of dignity and power. His knowledge of anatomy was so remarkable that he could work without models. Our artists, in these days, must always have before their eyes some nude figure to copy.

The same peculiarities which have given him fame as a sculptor he carried out into painting, in which he is even more remarkable; for the artists of Italy at this period often combined a skill for all the fine arts. In sculpture they were much indebted to the ancients, but painting seems to have been purely a development. In the Middle Ages it was comparatively rude. No noted painter arose until Cimabue, in the middle of the thirteenth century. Before him, painting was a lifeless imitation of models afforded by Greek workers in mosaics; but Cimabue abandoned this servile copying, and gave a new expression to heads, and grouped his figures. Under Giotto, who was contemporary with Dante, drawing became still more correct, and coloring softer. After him, painting was rapidly advanced. Pietro della Francesca was the father of perspective; Domenico painted in oil, discov-

peace was deemed incomplete without perfect ideal beauty and harmony in coloring wereing, as well as freedom of the pencil.

Da Vinci and Michael Angelo, who practised immutable principles by which art could be and rapidly following in their steps, Fra Bartolommeo, Fra Angelico, Rosso, and Andrea del Sarto began an era in painting, until the art culminated in Raphael and Corregio and Titian. And divided Italy — Bologna, Milan, Parma, and Venice with Rome and Florence for the empire of art, did many other cities which might be mentioned of which has a history, each of which is full of poetic associations ; so that all men who have visited Italy, or even visited it, feel a peculiar interest in its cities, — an interest which they can feel in even if they be such capitals as London. I excuse this extravagant admiration for the beautiful masterpieces produced in that age, making the parchment and canvas eloquent with the most in-

rejoices that he can forget—the priests and beggars, the dirty hotels, filthy friars, superstition, unthrift, Jesuitism, which stare ordinary tourists in the face, and all the other disgusting realities which philanthropists deplore so loudly in that degenerate but classical and ever-to-be-hallowed land. For, come what will, in spite of popes and despots it has been the scene of the highest glories of antiquity, calling to our minds saints and martyrs, as well as conquerors and emperors, and revealing at every turn their tombs and broken monuments, and all the hoary remnants of unsurpassed magnificence, as well as preserving in churches and palaces those wonders which were created when Italy once again lived in the noble aspiration of making herself the centre and the pride of the new civilization.

Da Vinci, the oldest of the great masters who immortalized that era, died in 1519, in the arms of Francis I. of France, and Michael Angelo received his mantle. The young sculptor was taken away from his chisel to paint, for Pope Julius II., the ceiling of the Sistine Chapel. After the death of his patron Lorenzo, he had studied and done famous work in marble at Bologna, at Rome, and again at Florence. He had also painted some, and with such immediate success that he had been invited to assist Da Vinci in decorating a hall in the ducal palace at Florence. But

... by his unprecedented talents substituted for him in that great work. He was inflexible; and the great artist began assisted by other painters; however, he so disgusted with them and sent them away, all alone. For twenty months he toiled, rarely eating abstemiously, absorbed utterly in his work; and the greater portion of the composition the vast ceiling was finished before any other work of his, except the admiring voice of the Pope, praised it good.

It would be useless to attempt to describe the celebrated frescos. Their subjects were taken from the Book of Genesis, with great figures of sibyls and prophets. They are now half concealed by the accumulated dust and smoke of three hundred years, and surveyed only by reclining at full length on the floor. We see enough, however, to be impressed with the boldness, the majesty, and the originality of the work — their fidelity to nature the less to be wondered at.

own mind, which ideal is ever associated with creative power.

It is this creative power which places Michael Angelo at the head of the artists of his great age; and not merely the power to create but the power of realizing the most exalted conceptions. Raphael was doubtless superior to him in grace and beauty, even as Titian afterwards surpassed him in coloring. He delighted, like Dante, in the awful and the terrible. This grandeur of conception was especially seen in his Last Judgment, executed thirty years afterwards, in completion of the Sistine Chapel, the work on which had been suspended at the death of Julius. This vast fresco is nearly seventy feet in height, painted upon the wall at the end of the chapel, as an altar-piece. No subject could have been better adapted to his genius than this — the day of supernal terrors (*dies ira, dies illa*), when, according to the sentiments of the Middle Ages, the doomed were subjected to every variety of physical suffering, and when this agony of pain, rather than agony of remorse, was expressed in tortured limbs and in faces writhing with demoniacal despair. Such was the variety of tortures which he expressed, showing an unexampled richness in imaginative powers, that people came to see it from the remotest parts of Italy. It made a great sensation, like the appearance of an immortal poem, and was

ing, and could not paint man, confined himself chiefly to cartoons and designs scattered far and wide, were reproduced by artists. His most famous cartoon was the Fall of Man, the one executed for the ducal palace at Pisa, the one executed for the ducal palace, as pendant to one by Leonardo da Vinci in the height of his fame. This picture is remarkable for the accuracy of drawing, and the boldness and form of expression, that Raphael came to Florence on purpose to study it; and it was this study giving boldness and dignity and variety to the human figure, as shown in this painting, which is his great originality and transcendent excellence. The great creations of the painters, in modern times as in the ancient, are those which represent the human figure in its ideal excellence, — which of course is what is most perfect, not in any one man or woman, but in men and women collectively. Hence the best of painters rarely have stooped to landscape painting, since no imaginary landscape can sur-

but you can represent the figure of a man or woman more beautiful than any one man or woman that has ever appeared. What mortal woman ever expressed the ethereal beauty depicted in a Madonna of Raphael or Murillo? And what man ever had such a sublimity of aspect and figure as the creations of Michael Angelo? Why, "a beggar," says one of his greatest critics, "arose from his hand the patriarch of poverty; the hump of his dwarf is impressed with dignity; his infants are men, and his men are giants." And, says another critic, "he is the inventor of epic painting, in that sublime circle of the Sistine Chapel which exhibits the origin, progress, and final dispensation of the theocracy. He has personified motion in the cartoon of Pisa, portrayed meditation in the prophets and sibyls of the Sistine Chapel and in the Last Judgment, traced every attitude which varies the human body, with every passion which sways the human soul." His supremacy is in the mighty soaring of his intellectual conceptions. Marvellous as a creator, like Shakspeare; profound and solemn, like Dante; representing power even in repose, and giving to the Cyclopean forms which he has called into being a charm of moral excellence which secures our sympathy; a firm believer in a supreme and personal God; disciplined in worldly trials, and glowing in lofty conceptions of justice, — he delights in portraying the stern prophets of Israel, surrounded with an

tles, and other great benefactors of the world, attached more value to the truths which elevate than to the arts which soften. It was the noble direction which Michael Angelo gave to art which made him a great benefactor not only of civilization, but also of art, by linking with it the eternal ideas of majesty and dignity, as well as the truths which are taught by divine inspiration,—another illustration of the profound reverence which the great master minds of the world, like Augustine, Pascal, and Bacon, have ever expressed for the ideas which were revealed by Christianity and the old prophets of Jehovah; ideas which many bright but inferior intellects, in their egotistical arrogance, have sought to subvert.

Yet it was neither as sculptor nor painter that Michael Angelo left the most enduring influence, but as architect. Painting and sculpture are the exclusive ornaments and possession of the rich and favored. But architecture concerns all men, and most men have something to do with it in the course of their lives. What boots it that a man pays two thousand pounds for a picture to be shut up in his library, and probably more valued for its rarity, or from the caprices of fashion, than for its real merits? But it is something when a nation pays a million for a ridiculous building, without regard to the object for which it is intended,—to be observed and criticised by everybody and for

nummons. Even the Moses of Michael Angel
object of interest to those who visit the church
Pietro in Vincoli; but St. Peter's is a monument
seen by large populations from generation to generation.
All London contemplates St. Paul's Church or
of Westminster, but the National Gallery may be
by a small fraction of the people only once a year,
the thousands who stand before the Tuileries
Madeleine not one in a hundred has visited the
of the Louvre. What material works of man
as those hoary monuments of piety or pride
three thousand years ago, and still magnificent
very ruins! How imposing are the pyramids, the
seum, and the Gothic cathedrals of the Middle Ages.
And even when architecture does not rear
roofs and arches and pinnacles, or tower to
heights, or inspire reverential awe from the associations
which cluster around it, how interesting are
minor triumphs! Who does not stop to admire
tiful window or porch.

appeal to the common eye, and have reference to the necessities of man, and sometimes express the consecrated sentiments of an age or a nation. Nor can it be prostituted, like painting and sculpture; it never corrupts the mind, and sometimes inspires it; and if it makes an appeal to the senses or the imagination, it is to kindle perceptions of the severe beauty of geometrical forms.

Whoever, then, has done anything in architecture has contributed to the necessities of man, and stimulated an admiration for what is venerable and magnificent. Now Michael Angelo was not only the architect of numerous palaces and churches, but also one of the principal architects of that great edifice which is, on the whole, the noblest church in Christendom, — a perpetual marvel and study; not faultless, but so imposing that it will long remain, like the old temple of Ephesus, one of the wonders of the world. He completed the church without great deviation from the plan of the first architect, Bramante, whom he regarded as the greatest architect that had lived, — altering Bramante's plans from a Latin to a Greek cross, the former of which was retained after Michael Angelo's death. But it is the interior, rather than the exterior of St. Peter's, which shows its vast superiority over all other churches for splendor and effect, and surprises all who are even fresh from Cologne and Milan and Westminster. It impresses us like

finished, nothing neglected; the lofty walls
with precious marbles, the side chapels
statues and monuments, the altars ornamented
with pictures,—and those pictures not painted
but copied in mosaic, so that they will neither
fade, but last till destroyed by violence. What
does it overpower the poetic mind when the glorious
interior first blaze upon the brain; what a
brightness, softness, and richness; what grandeur
and solidity, and strength; what unnumbered
columns around the altars; what grand mosaics on
the height of the wondrous dome,—larger than
the interior, rising two hundred feet from the
base of those lofty and massive piers which divide
the church into choir and nave; what effect of
awe after the eye gets accustomed to the vast proportions.
Oh, what silence reigns around! How difficult
for the sonorous chants of choristers and
organ to disturb that silence,—to be more than echoes
to the silent music which

heat or cold; and where the ever-burning lamps and clouds of incense diffusing the fragrance of the East, and the rich dresses of the mitred priests, and the unnumbered symbols, suggest the ritualism of that imposing worship when Solomon dedicated to Jehovah the grandest temple of antiquity!

Truly was St. Peter's Church the last great achievement of the popes, the crowning demonstration of their temporal dominion; suggestive of their wealth and power, a marble history of pride and pomp, a fitting emblem of that worship which appeals to sense rather than to God. And singular it was, when the great artist reared that gigantic pile, even though it symbolized the cross, he really gave a vital wound to that cause to which he consecrated his noblest energies; for its lofty dome could not be completed without the contributions of Christendom, and those contributions could not be made without an appeal to false principles which entered into Mediæval Catholicism,—even penance and self-expiation, which stirred the holy indignation of a man who knew and declared on what different ground justification should be based. Thus was Luther, in one sense, called into action by the labors of Michael Angelo; thus was the erection of St. Peter's Church overruled in the preaching of reformers, who would show that the money obtained by the sale of indulgences for sin could never

than a thousand years.

St. Peter's is not Gothic, it is a restoration of Greek; it belongs to what artists call the —a style of architecture marked by a return to classical models of antiquity. Michael Angelo brought back to civilization the old ideas of Grecian and Roman majesty,—typical of the original in the men who lived in the quiet admiration of beauty and grace; the men who built the temples and who shaped pillars and capitals and entablatures in the severest proportions, and fitted them with ornaments drawn from the living world,—plants and animals, especially images of God's highest workman; and of man not worn and macerated and monstrous, but of man when most resplendent in the perfections of the primeval strength and beauty. He returned to a style which classical antiquity had brought to great perfection, but which had been neglected by the new Teutonic nations.

Nor is there evidence of any

Middle Ages? Of its kind it has never been surpassed. Geometry and art — the true and the beautiful — meet. Nothing ever erected by the hand of man surpasses the more famous cathedrals of the twelfth and thirteenth centuries, in the richness and variety of their symbolic decorations. They typify the great ideas of Christianity; they inspire feelings of awe and reverence; they are astonishing structures, in their magnitude and in their effect. Monuments are they of religious zeal and poetical inspiration, — the creations of great artists, although we scarcely know their names; adapted to the uses designed; the expression of consecrated sentiments; the marble history of the ages in which they were erected, — now heavy and sombre when society was enslaved and mournful; and then cheerful and lofty when Christianity was joyful and triumphant. Who ever was satisfied in contemplating the diversified wonders of those venerable structures? Who would lose the impression which almost overwhelmed the mind when York minster, or Cologne, or Milan, or Amiens was first beheld, with their lofty spires and towers, their sculptured pinnacles, their flying buttresses, their vaulted roofs, their long arcades, their purple windows, their holy altars, their symbolic carvings, their majestic outlines, their grand proportions!

But beautiful, imposing, poetical, and venerable as are these hoary piles, they are not the all in all of art.

notels! A new style was needed, at least a new element of the old,—as lances and shield place to fire-arms, and the line and the the mariner's compass; as a new civilization creating new wants and developing the material of man.

So Michael Angelo arose, and revived the noble models of the classical ages,—to be no longer merely to churches but to palaces, civic centres, libraries, museums, banks,—all of the same mundane purposes. The material world had to be made more convenient, as much as the Mediæval age had made shrines. Humanity was to be developed as Deity to be worshipped. The artist took the same views, looking upon Gothic architecture as a new division of art,—even as truth is greater than the system, and Christianity wider than any sect. This Shakspeare of art would have smiled on the material and transcendental panegyrics of Michelet and other sentimentalists.

inspiration which comes from God, and never from the work of man's hands, which can be only a form of idolatry.

Michael Angelo found that the ornamentations of the ancient temples were as rich and varied as those of Mediæval churches. Mouldings were discovered of incomparable elegance; the figures on entablatures were found to be chiselled accurately from nature; the pillars were of matchless proportions, the capitals of graceful curvatures. He saw beauty in the horizontal lines of the Parthenon, as much as in the vertical lines of Cologne. He would not pull down the venerable monuments of religious zeal, but he would add to them. "Because the pointed arch was sacred, he would not despise the humble office of the lintel." And in southern climates especially there was no need of those steep Gothic roofs which were intended to prevent a great weight of rain and snow, and where the graceful portico of the Greeks was more appropriate than the heavy tower of the Lombards. He would seize on everything that the genius of past ages had indorsed, even as Christianity itself appropriates everything human, — science, art, music, poetry, eloquence, literature, — sanctifies it, and dedicates it to the Lord; not for the pride of priests, but for the improvement of humanity. Civilization may exist with Paganism, but only performs its highest uses when

heaven.

Nor was Michael Angelo responsible for the mongrel architecture which followed the Renaissance and which disfigures the modern capitals any more than for the perversion of pair of hands of Titian. But the indiscriminate use of pillars for humble houses, shops with Renaissance spires and towers erected on Grecian pediments no worse than schoolhouses built like cathedrals, chapels designed for preaching as much as for chants made dark and gloomy, where the preacher is lost and wasted amid vaulted arches and useless pillars. Michael Angelo encouraged the use of ruins; he himself conceived the beautiful Villa Maletta, true, and admired it wherever found, even in the excavations of ruined cities. He may have overlooked buried monuments of ancient art, but how could he escape the universal enthusiasm of his age for the remains of a glorious and forgotten civilization?

expanding forces of a new and grander era than was ever seen by Pagan heroes or by Gothic saints.

But I need not expatiate on the new ideas which Michael Angelo accepted, or the impulse he gave to art in all its forms, and to the revival of which civilization is so much indebted. Let us turn and give a parting look at the man,—that great creative genius who had no superior in his day and generation. Like the greatest of all Italians, he is interesting for his grave experiences, his dreary isolations, his vast attainments, his creative imagination, and his lofty moral sentiments. Like Dante, he stands apart from, and superior to, all other men of his age. •He never could sport with jesters, or laugh with buffoons, or chat with fools; and because of this he seemed to be haughty and disdainful. Like Luther, he had no time for frivolities, and looked upon himself as commissioned to do important work. He rejoiced in labor, and knew no rest until he was eighty-nine. He ate that he might live, not lived that he might eat. For seventeen years after he was seventy-two he worked on St. Peter's church; worked without pay, that he might render to God his last earthly tribute without alloy,—as religious as those unknown artists who erected Rheims and Westminster. He was modest and patient, yet could not submit to the insolence of little men in power. He even left the papal palace in disdain when

he found his labors unappreciated. Julius II. was forced to bend to the stern artist, not the artist to the Pope. Yet when Leo X. sent him to quarry marbles for nine years, he submitted without complaint. He had no craving for riches like Rubens, no love of luxury like Raphael, no envy like Da Vinci. He never over-tasked his brain, or suffered himself, like Raphael, — who died exhausted at thirty-seven, — to crowd three days into one, knowing that over-work exhausts the nervous energies and shortens life. He never attempted to open the doors which Providence had plainly shut against him, but waited patiently for his day, knowing it would come; yet whether it came or not, it was all the same to him, — a man with all the holy rapture of a Kepler, and all the glorious self-reliance of a Newton. He was indeed jealous of his fame, but he was not greedy of admiration. He worked without the stimulus of praise, — one of the rarest things, — urged on purely by love of art. He loved art for its own sake, as good men love virtue, as Palestrina loved music, as Bacon loved truth, as Kant loved philosophy, — satisfied with itself as its own reward. He disliked to be patronized, but always remembered benefits, and loved the tribute of respect and admiration, even as he scorned the empty flatterer of fashion. He was the soul of sincerity as well as of magnanimity; and hence had great capacity for friendship, as well as great power of self-sacrifice.

His friendship with Vittoria Colonna is as memorable as that of Jerome and Paula, or that of Hildebrand and the Countess Matilda. He was a great patriot, and clung to his native Florence with peculiar affection. Living in habits of intimacy with princes and cardinals, he never addressed them in adulatory language, but talked and acted like a nobleman of nature, whose inborn and superior greatness could be tested only by the ages. He placed art on the highest pinnacle of the temple of humanity, but dedicated that temple to the God of heaven in whom he believed. His person was not commanding, but intelligence radiated from his features, and his earnest nature commanded respect. In childhood he was feeble, but temperance made him strong. He believed that no bodily decay was incompatible with intellectual improvement. He continued his studies until he died, and felt that he had mastered nothing. He was always dissatisfied with his own productions. *Excelsior* was his motto, as Alp on Alp arose upon his view. His studies were diversified and vast. He wrote poetry as well as carved stone, his sonnets especially holding a high rank. He was engineer as well as architect, and fortified Florence against her enemies. When old he showed all the fire of youth, and his eye, like that of Moses, never became dim, since his strength and his beauty were of the soul,—ever expanding, ever adoring. His temper was stern, but

XXX.

MARTIN LUTHER.

THE PROTESTANT REFORMATION.

AMONG great benefactors, Martin Luther is one of the most illustrious. He headed the Protestant Reformation. This movement is so completely inter-linked with the literature, the religion, the education, the prosperity — yea, even the political history — of Europe, that it is the most important and interesting of all modern historical changes. It is a subject of such amazing magnitude that no one can claim to be well informed who does not know its leading issues and developments, as it spread from Germany to Switzerland, France, Holland, Sweden, England, and Scotland.

The central and prominent figure in the movement is Luther; but the way was prepared for him by a host of illustrious men, in different countries, — by Savonarola in Italy, by Huss and Jerome in Bohemia, by Erasmus in Holland, by Wyclif in England, and by sundry others, who detested the corruptions they ridiculed and lamented, but could not remove.

How flagrant those evils! Who can deny them? The papal despotism, and the frauds on which it was based; monastic corruptions; penance, and indulgences for sin, and the sale of them, more shameful still; the secular character of the clergy; the pomp, wealth, and arrogance of bishops; auricular confession; celibacy of the clergy, their idle and dissolute lives, their ignorance and superstition; the worship of the images of saints, and masses for the dead; the gorgeous ritualism of the mass; the substitution of legends for the Scriptures, which were not translated, or read by the people; pilgrimages, processions, idle pomps, and the multiplication of holy days; above all, the grinding spiritual despotism exercised by priests, with their inquisitions and excommunications, all centring in the terrible usurpation of the popes, keeping the human mind in bondage, and suppressing all intellectual independence, — these evils prevailed everywhere. I say nothing here of the massacres, the poisonings, the assassinations, the fornications, the abominations of which history accuses many of the pontiffs who sat on papal thrones. Such evils did not stare the German and English in the face, as they did the Italians in the fifteenth century. In Germany the vices were mediæval and monkish, not the unblushing infidelity and levities of the Renaissance, which made a radical reformation in Italy impossible. In Germany and England there was left among the

people the power of conscience, a rough earnestness of character, the sense of moral accountability, and a fear of divine judgment.

Luther was just the man for his work. Sprung from the people, poor, popular, fervent; educated amid privations, religious by nature, yet with exuberant animal spirits; dogmatic, boisterous, intrepid, with a great insight into realities; practical, untiring, learned, generally cheerful and hopeful; emancipated from the terrors of the Middle Ages, scorning the Middle Ages; progressive in his spirit, lofty in his character, earnest in his piety, believing in the future and in God,—such was the great leader of this emancipating movement. He was not so learned as Erasmus, nor so logical as Calvin, nor so scholarly as Melancthon, nor so broad as Cranmer. He was not a polished man; he was often offensively rude and brusque, and lavish of epithets. Nor was he what we call a modest and humble man; he was intellectually proud, disdainful, and sometimes, when irritated, abusive. None of his pictures represent him as a refined-looking man, scarcely intellectual, but coarse and sensual rather, as Socrates seemed to the Athenians. But with these defects and drawbacks he had just such traits and gifts as fitted him to lead a great popular movement,—bold, audacious, with deep convictions and rapid intellectual processes; prompt, decided, kind-hearted, generous, brave; in sympathy with

the people, eloquent, Herculean in energies, with an amazing power of work; electrical in his smile and in his words, and always ready for contingencies. Had he been more polished, more of a gentleman, more fastidious, more scrupulous, more ascetic, more modest, he would have shrunk from his tasks; he would have lost the elasticity of his mind,—he would have been discouraged. Even Saint Augustine, a broader and more catholic man than Luther, could not have done his work. He was a sort of converted Mirabeau. He loved the storms of battle; he impersonated revolutionary ideas. But he was a man of thought, as well as of action.

Luther's origin was of the humblest. Born in Eisleben, Nov. 10, 1483, the son of a poor peasant, his childhood was spent in penury. He was religious from a boy. He was religious when he sang hymns for a living, from house to house, before the people of Mansfeld while at school there, and also at the schools of Magdeburg and Eisenach, where he still earned his bread by his voice. His devotional character and his music gained for him a friend who helped him through his studies, till at the age of eighteen he entered the University at Erfurt, where he distinguished himself in the classics and the Mediæval philosophy. And here his religious meditations led him to enter the Augustinian monastery: he entered that strict retreat, as others

did, to lead a religious life. The great question of all time pressed upon his mind with peculiar force, "What shall a man give in exchange for his soul?" And it shows that religious life in Germany still burned in many a heart, in spite of the corruptions of the Church, that a young man like Luther should seek the shades of monastic seclusion, for meditation and study. He was a monk, like other monks; but it seems he had religious doubts and fears more than ordinary monks. At first he conformed to the customary ways of men seeking salvation. He walked in the beaten road, like Saint Dominic and Saint Francis; he accepted the great ideas of the Middle Ages, which he was afterwards to repudiate,—he was not beyond them, or greater than they were, at first; he fasted like monks, and tormented his body with austerities, as they did from the time of Benedict; he sang in the choir from early morn, and practised the usual severities. But his doubts and fears remained. He did not, like other monks, find peace and consolation; he did not become seraphic, like Saint Francis, or Bonaventura, or Loyola. Perhaps his nature repelled asceticism; perhaps his inquiring and original mind wanted something better and surer to rest upon than the dreams and visions of a traditionary piety. Had he been satisfied with the ordinary mode of propitiating the Deity, he would never have emerged from his retreat.

To a scholar the monastery had great attractions, even in that age. It was still invested with poetic associations and consecrated usages; it was indorsed by the venerable Fathers of the Church; it was favorable to study, and free from the noisy turmoil of the world. But with all these advantages Luther was miserable. He felt the agonies of an unforgiven soul in quest of peace with God; he could not get rid of them, they pursued him into the immensity of an intolerable night. He was in despair. What could austerities do for *him*? He hungered and thirsted after the truth, like Saint Augustine in Milan. He had no taste for philosophy, but he wanted the repose that philosophers pretended to teach. He was then too narrow to read Plato or Boethius. He was a self-tormented monk without relief; he suffered all that Saint Paul suffered at Tarsus. In some respects this monastic pietism resembled the pharisaism of Saul, in the schools of Tarsus,—a technical, rigid, and painful adherence to rules, fastings, obtrusive prayers, and petty ritualisms, which form the essence and substance of all pharisaism and all monastic life; based on the enormous error that man deserves heaven by external practices, in which, however, he can never perfect himself, though he were to live, like Simeon Stylites, on the top of a pillar for twenty years without once descending; an eternal unrest, because perfection cannot be attained; the most terrible slavery

to which a man can be conscientiously doomed, verging into hypocrisy and fanaticism.

It was then that a kind and enlightened friend visited him, and recommended him to read the Bible. The Bible never has been a sealed book to monks; it was ever highly prized; no convent was without it: but it was read with the spectacles of the Middle Ages. Repentance meant penance. In Saint Paul's Epistles Luther discovers the true ground of justification, — not works, but faith; for Paul had passed through similar experiences. Works are good, but faith is the gift of God. Works are imperfect with the best of men, even the highest form of works, to a Mediaeval eye, — self-expiation and penance; but faith is infinite, radiating from divine love; faith is a boundless joy, — salvation by the grace of God, his everlasting and precious boon to people who cannot climb to heaven on their hands and knees, the highest gift which God ever bestowed on men, — eternal life.

Luther is thus emancipated from the ideas of the Middle Ages and of the old Syriac monks and of the Jewish Pharisees. In his deliverance he has new hopes and aspirations; he becomes cheerful, and devotes himself to his studies. Nothing can make a man more cheerful and joyful than the cordial reception of a gift which is infinite, a blessing which is too priceless to be bought. The pharisee, the monk, the ritualist, is

gloomy, ascetic, severe, intolerant; for he is not quite sure of his salvation. A man who accepts heaven as a gift is full of divine enthusiasm, like Saint Augustine. Luther now comprehends Augustine, the great doctor of the Church, embraces his philosophy and sees how much it has been misunderstood. The rare attainments and interesting character of Luther are at last recognized; he is made a professor of divinity in the new university, which the Elector of Saxony has endowed, at Wittenberg. He becomes a favorite with the students; he enters into the life of the people. He preaches with wonderful power, for he is popular, earnest, original, fresh, electrical. He is a monk still, but the monk is merged in the learned doctor and eloquent preacher. He does not yet even dream of attacking monastic institutions, or the Pope; he is a good Catholic in his obedience to authorities; but he hates the Middle Ages, and all their ghostly, funereal, burdensome, and technical religious customs. He is human, almost convivial, — fond of music, of poetry, of society, of friends, and of the good cheer of the social circle. The people love Luther, for he has a broad humanity. They never did love monks, only feared their maledictions.

About this time the Pope was in great need of money: this was Leo X. He not only squandered his vast revenues in pleasures and pomps, like any secular monarch; he not only collected pictures and stat-

ues,—but he wanted to complete St. Peter's Church. It was the crowning glory of papal magnificence. Where was he to get money except from the contributions of Christendom? But kings and princes and bishops and abbots were getting tired of this everlasting drain of money to Rome, in the shape of annats and taxes; so Leo revived an old custom of the Dark Ages,—he would sell indulgences for sin; and he sent his agents to peddle them in every country.

The agent in Saxony was a very vulgar, boisterous, noisy, bullying Dominican, by the name of Tetzel. Luther abhorred him, not so much because he was vulgar and noisy, but because his infamous business derogated from the majesty of God and religion. In wrathful indignation he preached against Tetzel and his practices,—the abominable traffic of indulgences. Only God can forgive sins. It seemed to him to be an insult to the human understanding that any man, even a pope, should grant an absolution for crime. These indulgences were the very worst form of penance, since they made a mockery of virtue. And it was useless to preach against them so long as the principles on which they were based were not assailed. Everybody believed in penance; everybody believed that this, in some form, would insure salvation. It consisted in a temporal penalty or punishment inflicted on the sinner after confession to the priest, as a condition of his re-

ceiving absolution or an authoritative pardon of his sin by the Church as God's representative. And the indulgence was originally an official remission of this penalty, to be gained by offerings of money to the Church for its sacred uses. However ingenious this theory, the practice inevitably ran into corruption. The people who bought, the agents who sold, the popes who dispensed, these indulgences used them for the vilest purposes.

Fortunately, in those times in Germany everybody felt he had a soul to save. Neither the popes nor the Church ever lost that idea. The clergy ruled by its force, — by stimulating fears of divine wrath, whereby the wretched sinner would be physically tormented forever, unless he escaped by a propitiation of the Deity, — the common form of which was penance, deeds of supererogation, donations to the Church, self-expiation, works of fear and penitence, which commended themselves to the piety of the age; and this piety Luther now believed to be unenlightened, not the kind enjoined by Christ or Paul.

So, to instruct his students and the people as to the true ground of justification, which he had worked out from the study of the Bible and Saint Augustine amid the agonies of a tormented conscience, Luther prepared his theses, — those celebrated ninety-five propositions, which he affixed to the gates of the

church of Wittenberg, and which excited a great sensation throughout Northern Germany, reaching even the eyes of the Pope himself, who did not comprehend their tendency, but was struck with their power. "This Doctor Luther," said he, "is a man of fine genius." The students of the university, and the people generally, were kindled as if by Pentecostal fires. The new invention of printing scattered those theses everywhere, far and near; they reached the humble hamlet as well as the palaces of bishops and princes. They excited immediate and immense enthusiasm: there was freshness in them, originality, and great ideas. We cannot wonder at the enthusiasm which those religious ideas excited nearly four hundred years ago when we reflect that they were not cant words then, not worn-out platitudes, not dead dogmas, but full of life and exciting interest,—even as were the watchwords of Rousseau—"Liberty, Fraternity, Equality"—to Frenchmen, on the outbreak of their political revolution. And as those watchwords—abstractly true—roused the dormant energies of the French to a terrible conflict against feudalism and royalty, so those theses of Luther kindled Germany into a living flame. And why? Because they presented more cheerful and comforting grounds of justification than had been preached for one thousand years,—faith rather than penance; for works hinged on penance. The underly-

ing principle of those propositions was *grace*,—divine grace to save the world,—the principle of Paul and Saint Augustine; therefore not new, but forgotten; a mighty comfort to miserable people, mocked and cheated and robbed by a venal and a gluttonous clergy. Even Taine admits that this doctrine of grace is the foundation stone of Protestantism as it spread over Europe in the sixteenth century. In those places where Protestantism is dead,—where rationalism or Pelagian speculations have taken its place,—this fact may be denied; but the history of Northern Europe blazes with it,—a fact which no historian of any honesty can deny.

Very likely those who are not in sympathy with this great idea of Luther, Augustine, and Paul may ignore the fact,—even as Caleb Cushing once declared to me, that the Reformation sprang from the desire of Luther to marry Catherine Bora; and that learned and ingenious sophist overwhelmed me with his citations from infidel and ribald Catholic writers like Audin. Greater men than he deny that grace underlies the whole original movement of the reformers, and they talk of the Reformation as a mere revolt from Rome, as a war against papal corruption, as a protest against monkery and the dark ages, brought about by the spirit of a new age, the onward march of humanity, the necessary progress of society. I admit the secondary causes of the Reformation, which are very

important,—the awakened spirit of inquiry in the sixteenth century, the revival of poetry and literature and art, the breaking up of feudalism, fortunate discoveries, the introduction of Greek literature, the Renaissance, the disgusts of Christendom, the voice of martyrs calling aloud from their funeral pyres; yea, the friendly hand of princes and scholars deploring the evils of a corrupted Church. But how much had Savonarola, or Erasmus, or John Huss, or the Lollards aroused the enthusiasm of Europe, great and noble as were their angry and indignant protests? The genius of the Reformation in its early stages was a *religious* movement, not a political or a moral one, although it became both political and moral. Its strength and fervor were in the new ideas of salvation,—the same that gave power to the early preachers of Christianity,—not denunciations of imperialism and slavery, and ten thousand evils which disgraced the empire, but the proclamation of the ideas of Paul as to the grounds of hope when the soul should leave the body; the salvation of the Lord, declared to a world in bondage. Luther kindled the same religious life among the masses that the apostles did; the same that Wyclif did, and by the same means,—the declaration of salvation by belief in the incarnate Son of God, shedding his blood in infinite love. Why, see how this idea spread through Germany, Switzerland, and France, and took possession

of the minds of the English and Scotch yeomanry, with all their stern and earnest ruggedness. See how it was elaborately expanded by Calvin, how it gave birth to a new and strong theology, how it entered into the very life of the people, especially among the Puritans, — into the souls of even Cromwell's soldiers. What made "Pilgrim's Progress" the most popular book ever published in England? Because it reflected the theology of the age, the religion of the people, all based on Luther's theses, — the revival of those old doctrines which converted the Roman provinces from Paganism. I do not care if these statements are denied by Catholics, or rationalists, or progressive savants. What is it to me that the old views have become unfashionable, or are derided, or are dead, in the absorbing materialism of this Epicurean yet brilliant age? I know this, that I am true to history when I declare that the glorious Reformation in which we all profess to rejoice, and which is the greatest movement, and the best, of our modern time, — susceptible of indefinite application, interlinked with the literature and the progress of England and America, — took its first great spiritual start from the ideas of Luther as to justification. This was the voice of heaven's messenger proclaiming aloud, so that the heavens re-echoed to the glorious and triumphant annunciation, and the earth heard and rejoiced with exceeding joy, "Behold, I send tidings of

salvation : it is grace, divine grace, which shall undermine the throne of popes and pagans, and reconcile a fallen world to God !”

Yes, it was a Christian philosopher, a theologian,— a doctor of divinity, working out in his cell and study, through terrible internal storm and anguish, and against the whole teaching of monks and bishops and popes and universities, from the time of Charlemagne, the same truth which Augustine learned in his wonderful experiences, — who started the Reformation in the right direction ; who became the greatest benefactor of these modern times, because he based his work on everlasting and positive ideas, which had life in them, and hope, and the sanction of divine authority ; thus virtually invoking the aid of God Almighty to bring about and restore the true glory of his Church on earth, — a glory forever to be identified with the death of his Son. I see no law of progress here, no natural and necessary development of nations ; I see only the light and power of individual genius, brushing away the cobwebs and sophistries and frauds of the Middle Ages, and bringing out to the gaze of Europe the vital truth which, with supernatural aid, made in old times the day of Pentecost. And I think I hear the emancipated people of Saxony exclaim, from the Elector downwards, “ If these ideas of Doctor Luther are true, and we feel them to be, then all our penances

...accept as our Deliverer,
and our Eternal Lord."

Thus was born the first great idea of the
Reformation, out of Luther's brain, out of his agonies,
and sent forth to conquer, and produce changes
marvellous to behold.

It is not my object to discuss the truth or
falsity of this fundamental doctrine. There are many who
deny it, even among Protestants. I am not a contro-
versialist, or a theologian: I am simply an historian.
I wish to show what is historically true and clear; and
to show all the scholars and critics of the world to prove
that this doctrine is not the basal pillar of the Reformation
of Luther. I wish to make emphatic the
statement that *justification by faith* was, as an historical
fact, the great primal idea of Luther; not new
to him and to his age.

I have now to show how this idea led to others,
how they became connected together; how they produced
not only a spiritual movement, but political, moral,
and intellectual.

institutions, it was not even the vehement denunciation against sin in high places, which inflamed the anger of the Pope against Savonarola. To some it doubtless seemed like the old controversy between Augustine and Pelagius, like the contentions between Dominican and Franciscan monks. But it was too important to escape the attention of even Leo X., although at first he gave it no thought. It was a dangerous agitation; it had become popular; there was no telling where it would end, or what it might not assail. It was deemed necessary to stop the mouth of this bold and intellectual Saxon theologian.

So the voluptuous, infidel, elegant Pope — accomplished in manners and pagan arts and literature — sent one of the most learned men of the Church which called him Father, to argue with Doctor Luther, confute him, conquer him, — deeming this an easy task. But the doctor could not be silenced. His convictions were grounded on the rock; not on Peter, but on the rock from which Peter derived his name. All the papal legates and cardinals in the world could neither convince nor frighten him. He courted argument; he challenged the whole Church to refute him.

Then the schools took up the controversy. All that was imposing in names, in authority, in traditions, in associations, was arrayed against him. They came down upon him with the whole array of scholastic

The disputants met in the great hall of the Elector. Never before was seen in Germany an array of doctors and theologians and It rivalled in importance and dignity the Council of Nice, when the great Constantine presided over the Trinitarian controversy. The combat was as great as Athanasius and Arius,—as vehement, though not so fierce. Doctor Eck was second only to Luther in reputation, in dialectical skill, and in scholastic learning. He was the pride of the German Church. Luther, however, had deeper convictions, more powerful greater eloquence, and at that time he was

The champion of the schools, of sophistical subtleties, of dead-letter literature, of quibbles, and words, soon overwhelmed the Silesian with his citations, decrees of councils, opinions of eminent ecclesiastics, the literature of the Church, and the mighty authority. He was on the eve of settling the question by authorities, as lawyers and pedants were wont to do.

He swept away the premises of the argument. He denied the supreme authority of popes and councils and universities. He appealed to the Scriptures, as the only ultimate ground of authority. He did not deny authority, but appealed to it in its highest form. This was unexpected ground. The Church was not prepared openly to deny the authority of Saint Paul or Saint Peter; and Luther, if he did not gain his case, was far from being beaten, and — what was of vital importance to his success — he had the Elector and the people with him.

Thus was born the second great idea of the Reformation, — the *supreme authority of the Scriptures*, to which Protestants of every denomination have since professed to cling. They may differ in the interpretation of texts, — and thus sects and parties gradually arose, who quarrelled about their meaning, — but none of them deny their supreme authority. All the issues of Protestants have been on the meaning of texts, on the interpretation of the Scriptures, — to be settled by learning and reason. It was not until rationalism arose, and rejected plain and obvious declarations of Scripture, as inconsistent with reason, as interpolations, as uninspired, that the authority of the Scriptures was weakened; and these rationalists — and the land of Luther became full of them — have gone infinitely beyond the Catholics in undermining the Bible.

... away its divine authority,

T. .

clergy, acknowledging allegiance to their spiritual head, who in matters of faith is also infallible. We can accept nothing which is not indorsed by popes and councils. No matter how plain the Scriptures seem to be, on certain disputed points only the authority of the Church can enlighten and instruct us. We distrust reason,—that is, what you call reason,—for reason can twist anything, and pervert it; but what the Church says, is true,—its collective intelligence is our supreme law [thus putting papal dogmas above reason, above the literal and plain declarations of Scripture]. Moreover, since the Scriptures are to be interpreted only by priests, it is not a safe book for the people. We, the priests, will keep it out of their hands. They will get notions from it fatal to our authority; they will become fanatics; they will, in their conceit, defy us.”

Then Luther rose, more powerful, more eloquent, more majestic than before; he rose superior to himself. “What,” said he, “keep the light of life from the people; take away their guide to heaven; keep them in ignorance of what is most precious and most exalting; deprive them of the blessed consolations which sustain the soul in trial and in death; deny the most palpable truths, because your dignitaries put on them a construction to bolster up their power! What an abomination! what treachery to heaven! what peril

to the souls of men! Besides, your authorities differ: Augustine takes different ground from Pelagius; Bernard from Abélard; Thomas Aquinas from Dun Scotus. Have not your grand councils given contradictory decisions? Whom shall we believe? Yea, the popes themselves, your infallible guides,—have they not at different times rendered different decisions? What would Gregory I. say to the verdicts of Gregory VII.?

“No, the Scriptures are the legacy of the early Church to universal humanity; they are the equal and treasured inheritance of all nations and tribes and kindreds upon the face of the earth, and will be till the day of judgment. It was intended that they should be diffused, and that every one should read them, and interpret them each for himself; for he has a soul to save, and he dare not intrust such a precious thing as his soul into the keeping of selfish and ambitious priests. Take away the Bible from a peasant, or a woman, or any layman, and cannot the priest, armed with the terrors and the frauds of the Middle Ages, shut up his soul in a gloomy dungeon, as noisome and funereal as your Mediæval crypts? And will you, ye boasted intellectual guides of the people, extinguish reason in this world in reference to the most momentous interests? What other guide has a man but his reason? And you would prevent this very reason from being enlightened by the Gospel! You would obscure reason itself by

your traditions, O ye blind leaders of the blind! O ye legal and technical men, obscuring the light of truth! O ye miserable Pharisees, ye bigots, ye selfish priests, tenacious of your power, your inventions, your traditions, — will ye withhold the free redemption, God's greatest boon, salvation by the blood of Christ, offered to all the world? Yea, will you suffer the people to perish, soul and body, because you fear that, instructed by God himself, they will rebel against your accursed despotism? Have you considered what a mighty crime you thus commit against God, against man? Ye rule by an infernal appeal to the superstitious fears of men; but how shall ye yourselves, for such crimes, escape the damnation of that hell into which you would push your victims unless they obey *you*?

“No, I say, let the Scriptures be put into the hands of everybody; let every one interpret them for himself, according to the light he has; let there be private judgment; let spiritual liberty be revived, as in Apostolic days. Then only will the people be emancipated from the Middle Ages, and arise in their power and majesty, and obey the voice of enlightened conscience, and be true to their convictions, and practise the virtues which Christianity commands, and obey God rather than man, and defy all sorts of persecution and martyrdom, having a serene faith in those blessed promises

Pagan Italy, when she dug up the buried statues of Greece and Rome, and revived the literature and arts which soften, but do not save! — for private judgment and religious liberty mean nothing more and nothing less than the unrestricted perusal of the Scriptures as the guide of life.

This right of private judgment, on which Luther was among the first to insist, and of which certainly he was the first great champion in Europe, was in that age a very bold idea, as well as original. It flattered as well as stimulated the intellect of the people, and gave them dignity; it gave to the Reformation its popular character; it appealed to the mind and heart of Christendom. It gave consolation to the peasantry of Europe; for no family was too poor to possess a Bible, the greatest possible boon and treasure, — read and pondered in the evening, after hard labors and bitter insults; read aloud to the family circle, with its inexhaustible store of moral wealth, its beautiful and touching narratives, its glorious poetry, its awful prophecies, its supernal counsels, its consoling and emancipating truths, — so tender and yet so exalting, raising the soul above the grim trials of toil and poverty into the realms of seraphic peace and boundless joy. The Bible even gave hope to heretics. All sects and parties could take shelter under it; all could stand on the broad platform of religion, and survey from it the

On this broad basis John Milton could
with John Knox, and John Locke with Rich-
ard and Oliver Cromwell with Queen Elizabeth
Bacon with William Penn, and Bishop
John Wesley, and Jonathan Edwards &
Channing.

This idea of private judgment is what se-
parates Catholics from the Protestants; not most
but most vitally. Many are the Catholics
who accept Luther's idea of grace, since it is
Saint Augustine; and of the supreme authority
of the Scriptures, since they were so highly valued
by the Fathers: but few of the Catholic clergy have
created religious liberty, — that is, the inter-
pretation of the Scriptures by the people, — for it
is a blow to their supremacy, their hierarchy,
and their institutions. They will no more readily
than William the Conqueror would have

Adolphus, at Ivry by Henry IV. This right of worshipping God according to the dictates of conscience, enlightened by the free reading of the Scriptures, is just what the "invincible armada" was sent by Philip II. to crush; just what Alva, dictated by Rome, sought to crush in Holland; just what Louis XIV., instructed by the Jesuits, did crush out in France, by the revocation of the Edict of Nantes. The Satanic hatred of this right was the cause of most of the martyrdoms and persecutions of the sixteenth and seventeenth centuries. It was the declaration of this right which emancipated Europe from the dogmas of the Middle Ages, the thralldom of Rome, and the reign of priests. Why should not Protestants of every shade cherish and defend this sacred right? This is what made Luther the idol and oracle of Germany, the admiration of half Europe, the pride and boast of succeeding ages, the eternal hatred of Rome; not his religious experiences, not his doctrine of justification by faith, but the emancipation he gave to the mind of the world. This is what peculiarly stamps Luther as a man of genius, and of that surprising audacity and boldness which only great geniuses evince when they follow out the logical sequence of their ideas, and penetrate at a blow the hardened steel of volcanic armor beneath which the adversary boasts.

Great was the first Leo, when from his rifled palace

justice, murders and assassinations unavailing; power destroyed; vice, in all its enormities and obscenities, rampant and multiplying; opinions gaining ground; soldiers turned into slaves; women shrieking; bishops praying in despair; barbarism even paganism in danger of being revived; a world forlorn, and dismal; Pandemonium let loose; wailing and shouting and screaming, in view of the catastrophe predicted alike by Jeremy the prophet and the ænean sybil;— great was that Leo, when in this he said, with old patrician heroism, ‘I will revive government once more upon this earth, not by bringing back the Cæsars, but by declaring a theocracy, by making myself the vicegerent of God, by virtue of the promise made to Peter, whose successor I am, in order to restore law, punish crime, suppress heresy, encourage genius, conserve peace, hear the petitions, protect learning; appealing to love, but to love and fear. Who but the Church can do this?’

be restored once more." As he sent out his legates, he fulminated his bulls and established tribunals of appeal; he made a net-work of ecclesiastical machinery, and proclaimed the dangers of eternal fire, and brought kings and princes before him on their knees. The barbaric world was saved.

But greater than Leo was Luther, when — outraged by the corruptions of this spiritual despotism, and all the false and Pagan notions which had crept into theology, obscuring the light of faith and creating an intolerable bondage, and opposing the new spirit of progress which science and art and industry and wealth had invoked — he courageously yet modestly comes forward as the champion of a new civilization, and declares, with trumpet tones, "Let there be private judgment; liberty of conscience; the right to read and interpret Scripture, in spite of priests! so that men may think for themselves, not only on the doctrines of eternal salvation but on all the questions to be deduced from them, or interlinked with the past or present or future institutions of the world. Then shall arise a new creation from dreaded destruction, and emancipated millions shall be filled with an unknown enthusiasm, and advance with the new weapons of reason and truth from conquering to conquer, until all the strongholds of sin and Satan shall be subdued, and laid triumphantly at the foot of His throne whose right it is to reign."

a warrior, to carry out his ideas, and also himself against the wrath he has provoked step by step to still bolder aggressions, unto those venerable institutions which he once — all the frauds and inventions of Mediaevalism, all the machinery by which Europe was governed for one thousand years; yea, the person of the Pope himself, whom he defies, whom he attacks, and against whom he urges Christendom to take up arms, a combatant, a warrior, a reformer, his person and character somewhat change. He is coarser, more sensual-looking, he drinks more beer, he tells more lies, he uses harder names; he becomes more arbitrary; he dictates and commands; he quarrels with his friends; he is imperious; he fears nobody, and he is full of old usages; he marries a nun; he fights; he is a great leader and general, and wields no less power; he is an executive and administrative man; he has his courage and insight and will and Herculean strength.

How can I compress into a few sentences the demolitions and destructions which this indignant and irritated reformer now makes in Germany, where he is protected by the Elector from Papal vengeance? Before the reconstruction, the old rubbish must be cleared away, and Augean stables must be cleansed. He is now at issue with the whole Catholic régime, and the whole Catholic world abuse him. They call him a glutton, a wine-bibber, an adulterer, a scoffer, an atheist, an imp of Satan; and he calls the Pope the scarlet mother of abominations, Antichrist, Babylon. That age is prodigal in offensive epithets; kings and prelates and doctors alike use hard words. They are like angry children and women and pugilists; their vocabulary of abuse is amusing and inexhaustible. See how prodigal Shakespeare and Ben Jonson are in the language of vituperation. But they were all defiant and fierce, for the age was rough and earnest. The Pope, in wrath, hurls the old weapons of the Gregorys and the Clements. But they are impotent as the darts of Priam; Luther laughs at them, and burns the Papal bull before a huge concourse of excited students and shopkeepers and enthusiastic women. He severs himself completely from Rome, and declares an unextinguishable warfare. He destroys and breaks up the ceremonies of the Mass; he pulls down the consecrated altars, with their candles and smoking incense and vessels of silver and gold, since

A bulwark never failing.”**

rather than sense ; denounces superstitions, while he rebukes sins ; and kindles a profound fervor, based on the recognition of new truths. He is not fully emancipated from the traditions of the past ; for he retains the doctrine of transubstantiation, and keeps up the holidays of the Church, and allows recreation on the Sabbath. But what he thinks the most of is the circulation of the Scriptures among plain people. So he translates them into German, — a gigantic task ; and this work, almost single-handed, is done so well that it becomes the standard of the German language, as the Bible of Tindale helped to form the English tongue ; and not only so, but it has remained the common version in use throughout Germany, even as the authorized King James version, made nearly a century later by the labor of many scholars and divines, has remained the standard English Bible. Moreover, he finds time to make liturgies and creeds and hymns, and to write letters to all parts of Christendom, — a Jerome, a Chrysostom, and an Augustine united ; a kind of Protestant pope, to whom everybody looks for advice and consolation. What a wonderful man ! No wonder the Germans are so fond of him and so proud of him, — a Briareus with a hundred arms ; a marvel, a wonder, a prodigy of nature ; the most gifted, versatile, hard-working man of his century or nation !

At last, this great theologian, this daring innovator, is

summoned by imperial, not papal, authority before the Diet of the empire at Worms, where the Emperor, the great Charles V., presides, amid bishops, princes, cardinals, legates, generals, and dignitaries. Thither Luther must go,—yet under imperial safe conduct,—and consummate his protests, and perhaps offer up his life. Painters, poets, historians, have made that scene familiar,—the most memorable in the life of Luther, as well as one of the grandest spectacles of the age. I need not dwell on that exciting scene, where, in the presence of all that was illustrious and powerful in Germany, this defenceless doctor dares to say to supremest temporal and spiritual authority, “Unless you confute me by arguments drawn from Scripture, I cannot and will not recant anything . . . Here I stand; I cannot otherwise: God help me! Amen.” How superior to Galileo and other scientific martyrs! He is not afraid of those who can kill only the body; he is afraid only of Him who hath power to cast both soul and body into hell. So he stands as firm as the eternal pillars of justice, and his cause is gained. What if he did not live long enough to accomplish all he designed! What if he made mistakes, and showed in his career many of the infirmities of human nature! What if he cared very little for pictures and statues,—the revived arts of Greece and Rome, the Pagan Renaissance in which he only sees infidelity, levities, and luxuries, and other abominations

which excited his disgust and abhorrence when he visited Italy! *He* seeks, not to amuse and adorn the Papal empire, but to reform it; as Paul before him sought to plant new sentiments and ideas in the Roman world, indifferent to the arts of Greece, and even the beauties of nature, in his absorbing desire to convert men to Christ. And who, since Paul, has rendered greater service to humanity than Luther? The whole race should be proud that such a man has lived.

We will not follow the great reformer to the decline of his years; we will not dwell on his subsequent struggles and dangers, his marvellous preservation, his personal habits, his friendships and his hatreds, his joys and sorrows, his bitter alienations, his vexations, his disappointments, his gloomy anticipations of approaching strife, his sickened yet exultant soul, his last days of honor and of victory, his final illness, and his triumphant death in the town where he was born. It is his legacy that we are concerned in, the inheritance he left to succeeding generations, — the perpetuated ideas of the Reformation, which he worked out in anguish and in study, and which we will not let die, but will cherish in our memories and our hearts, as among the most precious of the heirlooms of genius, susceptible of boundless application. And it is destined to grow brighter and richer, in spite of counter-reformation and

crates institutions and nations, and
sovereignty of intelligence, the glory of
of God.

THOMAS CRANMER.

THE ENGLISH REFORMATION.

A. D. 1480-1556.

XXXI.

THOMAS CRANMER.

THE ENGLISH REFORMATION.

AS the great interest of the Middle Ages, in an historical point of view, centres around the throne of the popes, so the most prominent subject of historical interest in our modern times is the revolt from their almost unlimited domination. The Protestant Reformation, in its various relations, was a movement of transcendent importance. The history of Christendom, in a moral, a political, a religious, a literary, and a social point of view, for the last three hundred years, cannot be studied or comprehended without primary reference to that memorable revolution.

We have seen how that great insurrection of human intelligence was headed in Germany by Luther, and we shall shortly consider it in Switzerland and France under Calvin. We have now to contemplate the movement in England.

The most striking figure in it was doubtless Thomas Cranmer, Archbishop of Canterbury, although he does

channel, so far as the religious welfare of the nation is considered, although in his principles of government he was as absolute as Richelieu. Like the great French statesman, he exalted the throne; but, unlike him, he promoted the personal reign of the sovereign he served with remarkable ability and devotion.

Thomas Cromwell, the prime minister of Henry VIII., after the fall of Wolsey, was born in humble ranks, and was in early life a common soldier in the wars of Italy, then a clerk in a mercantile house in Antwerp, then a wool merchant in Middleborough, then a member of Parliament, and was employed by Wolsey in suppressing some of the smaller monasteries. His fidelity to his patron Wolsey, at the time of that great cardinal's fall, attracted the special notice of the King, who made him royal secretary in the House of Commons. He made his fortune by advising Henry to declare himself Head of the English Church, when he was entangled in the difficulties growing out of the divorce of Catharine. This advice was given with the patriotic view of making the royal authority superior to that of the Pope in Church patronage, and of making England independent of Rome.

The great scandal of the times was the immoral lives of the clergy, especially of the monks, and the immunities they enjoyed. They were a hindrance to the royal authority, and weakened the resources of the country

they were no longer needed; that they had become corrupt, and too corrupt to be reformed; that they were no longer abodes of piety, or beehives of industry, or nurseries of art, or retreats of learning; that their wealth was squandered; that they upheld the arm of a foreign power; that they shielded offenders against the laws; that they encouraged vagrancy and extortion; that, in short, they were nests of unclean birds.

The monks and friars opposed the new learning now extending from Italy to France, to Germany, and to England. Colet came back from Italy, not to teach Platonic mysticism, but to unlock the Scriptures in the original,—the centre of a group of scholars at Oxford, of whom Erasmus and Thomas More stood in the foremost rank. Before the close of the fifteenth century, it is said that ten thousand editions of various books had been printed in different parts of Europe. All the Latin authors, and some of the Greek, were accessible to students. Tunstall and Latimer were sent to Padua to complete their studies. Fox, bishop of Winchester, established a Greek professorship at Oxford. It was an age of enthusiasm for reviving literature,—which, however, received in Germany, through the influence chiefly of Luther, a different direction from what it received in Italy, and which extended from Germany to England. But to this awakened spirit the monks presented obstacles and discouragements. They had no

Some of the most important results of repeated attempts had been made to reform without success. As early as 1489, Innocent VIII issued a commission for a general investigation. Monks were accused of dilapidating public buildings, frequenting infamous places, of stealing, of consecrating shrines. In 1511, Archbishop of Canterbury instituted another visitation. In 1523 Cardinal Wolsey himself undertook the task of reform. The Parliament, in 1535, appointed Cromwell visitor-general, issued a commission, and introduced lay lawyers, not priests, who found that the worst had been told. It was found that two thirds of the monasteries of England were living in concubinage; lands were wasted and mortgaged, and the buildings falling into ruins. They found the Abbot of Westminster surrounded with more women than he was allowed his followers, and the nuns of Litchfield notoriously immoral.

hundred pounds a year, and the sequestration of their lands to the King. About two hundred of the lesser convents were thus suppressed, and the monks turned adrift, yet not entirely without support. This spoliation may have been a violation of the rights of property, but the monks had betrayed their trusts. The next Parliament completed the work. In 1539 all the religious houses were suppressed, both great and small. Such venerable and princely retreats as St. Albans, Glastonbury, Reading, Bury St. Edmonds, and Westminster, which had flourished one thousand years,—founded long before the Conquest,—shared the common ruin. These probably would have been spared, had not the first suppression filled the country with traitors. The great insurrection in Lincolnshire which shook the foundation of the throne, the intrigues of Cardinal Pole, the Cornish conspiracy in which the great house of Neville was implicated, and various other agitations, were all fomented by the angry monks.

Rapacity was not the leading motive of Henry or his minister, but the public welfare. The measure of suppression and sequestration was violent, but called for. Cromwell put forth no such sophistical pleas as those revolutionists who robbed the French clergy,—that their property belonged to the nation. In France the clergy were despoiled, not because they were infamous, but because they were rich. In England the

monks may have suffered injustice from the severity of their punishment, but no one now doubts that punishment was deserved. Nor did Henry retain all the spoils himself: he gave away the abbey lands with a prodigality equal to his rapacity. He gave them to those who upheld his throne, as a reward for service or loyalty. They were given to a new class of statesmen, who led the popular party,—like the Fitzwilliams, the Russells, the Dudleys, and the Seymours,—and thus became the foundation of their great estates. They were also distributed to many merchants and manufacturers who had been loyal to the government. From one third to two thirds of the landed property of the kingdom,—as variously estimated,—thus changed hands. It was an enormous confiscation,—nearly as great as that made by William the Conqueror in favor of his army of invaders. It must have produced an immense impression on the mind of Europe. It was almost as great a calamity to the Catholic Church of England as the emancipation of slaves was to their Southern masters in our late war. Such a spoliation of the Church had not before taken place in any country of Europe. How great an evil the monastic system must have been regarded by Parliament to warrant such an act! Had it not been popular, there would have been discontents amounting to a general hostility to the throne.

It must also be borne in mind that this dissolution of the monasteries, this attack on the monastic system, was not a religious movement fanned by reformers, but an act of Parliament, at the instance of a royal minister. It was not done under the direction of a Protestant king,—for Henry was never a Protestant,—but as a public measure in behalf of morality and for reasons of State. It is true that Henry had, by his marriage with Anne Boleyn and the divorce of his virtuous queen, defied the Pope and separated England from Rome, so far as appointments to ecclesiastical benefices are concerned. But in offending the Pope he also equally offended Charles V. The results of his separation from Rome, during his life, were purely political. The King did not give up the Mass or the Roman communion or Roman dogmas of faith; he only prepared the way for reform in the next reign. He only intensified the hatred between the old conservative party and the party of reform and progress.

How far Cromwell himself was a Protestant it is difficult to tell. Doubtless he sympathized with the new religious spirit of the age, but he did not openly avow the faith of Luther. He was the able and unscrupulous minister of an absolute monarch, bent on sweeping away abuses of all kinds, but with the idea of enlarging the royal authority as much, perhaps, as promoting the prosperity of the realm.

fall of Wolsey, and had resulted in the probate duties, legacies, and mortuaries, clergy had been enriched. A limitation and enforcement of residence had also. But a still greater blow to the privileges was struck by the Parliament under Cromwell, who had elevated it in order to the despotic measures of the Crown; and a law was passed that no one under the rank of a deacon, if convicted of felony, should be able to plead his "benefit of clergy," but should be treated like ordinary criminals, — thus re-establishing the provisions of Clarendon in the time of Becket. An act also was passed, by which no one could be removed, as aforetime, to the archbishop's court in his own diocese, — a very beneficent act, since the clergy had been needlessly subject to great expence in being obliged to travel considerable distances. It was moreover enacted that men could no longer be removed from their estates by the king.

sent to the Pope on any new preferment; a great burden to the clergy; a sort of tribute to a foreign power. Within fifty years, one hundred and sixty thousand pounds had thus been sent from England to Rome, from this one source of papal revenue alone,—equal to three million pounds at the present time, or fifteen millions of dollars, from a country of only three millions of people. It was the passage of that act which induced Sir Thomas More (a devoted Catholic, but a just and able and incorruptible judge) to resign the seals which he had so long and so honorably held,—the most prominent man in England after Cromwell and Cranmer; and it was the execution of this lofty character, because he held out against the imperious demands of Henry, which is the greatest stain upon this monarch's reign. Parliament also called the clergy to account for excessive acts of despotism, and subjected them to the penalty of a *premunire* (the offence of bringing a foreign authority into England), from which they were freed only by enormous fines.

Thus it would seem that many abuses were removed by Cromwell and the Parliament during the reign of Henry VIII. which may almost be considered as reforms of the Church itself. The authority of the Church was not attacked, still less its doctrines, but only abuses and privileges the restraint of which was of public benefit, and which tended to reduce the power

the clergy had enjoyed from the days of Ina, — a reform which Henry II. and Edward other sovereigns, had failed to effect. The great work of Cromwell, and in it he had the sanction of his royal master, since it was a transition from the clergy to the throne; and Henry was hated and anathematized by Rome as the Pope of Germany was, without ceasing to be a King. He even retained the title of Defender of the Faith, which had been conferred upon him by the Pope, in opposition to the theological doctrines of Luther, which he never accepted, and which he always de-

Cromwell did not long survive the great work he had rendered to his king and the nation. In the exercise of his power he made a fatal mistake. He refused the King in regard to Anne of Cleves, whose marriage was favored from motives of expediency and a desire to promote the Protestant cause. He presented upon the King a woman who could not speak English, — a woman without graces or

of this mistake. The great Duke of Norfolk, head of the Catholic party, accused him at the council-board of high treason. Two years before, such a charge would have received no attention; but Henry now hated him, and was resolved to punish him for the wreck of his domestic happiness.

Cromwell was hurried to that gloomy fortress whose outlet was generally the scaffold. He was denied even the form of trial. A bill of attainder was hastily passed by the Parliament he had ruled. Only one person in the realm had the courage to intercede for him, and this was Cranmer, Archbishop of Canterbury; but his entreaties were futile. The fallen minister had no chance of life, and no one knew it so well as himself. Even a trial would have availed nothing; nothing could have availed him,—he was a doomed man. So he bade his foes make quick work of it; and quick work was made. In eighteen days from his arrest, Thomas Cromwell, Earl of Essex, Knight of the Garter, Grand Chamberlain, Lord Privy Seal, Vicar-General, and Master of the Wards, ascended the scaffold on which had been shed the blood of a queen,—making no protestation of innocence, but simply committing his soul to Jesus Christ, in whom he believed. Like Wolsey, he arose from an humble station to the most exalted position the King could give; and, like Wolsey, he saw the vanity of dele-

gated power as soon as he offended the source of power.

“ He who ascends the mountain-tops shall find
The loftiest peak most wrapped in clouds and storms.
Though high above the sun of glory shines,
And far beneath the earth and ocean spread,
Round *him* are icy rocks, and loudly blow
Contending tempests on his naked head.”

On the disappearance of Cromwell from the stage, Cranmer came forward more prominently. He was a learned doctor in that university which has ever sent forth the apostles of great emancipating movements. He was born in 1489, and was therefore twenty years of age on the accession of Henry VIII. in 1509, and was twenty-eight when Luther published his theses. He early sympathized with the reform doctrines, but was too politic to take an active part in their discussion. He was a moderate, calm, scholarly man, not a great genius or great preacher. He had none of those bold and dazzling qualities which attract the gaze of the world. We behold in him no fearless and impetuous Luther,—attacking with passionate earnestness the corruptions of Rome; bracing himself up to revolutionary assaults, undaunted before kings and councils, and giving no rest to his hands or slumber to his eyes until he had consummated his protests,—a man of the people, yet a dictator to princes. We see no severely logical Calvin,

—pushing out his metaphysical deductions until he had chained the intellect of his party to a system of incomparable grandeur and yet of repulsive austerity, exacting all the while the same allegiance to doctrines which he deduced from the writings of Paul as he did to the direct declarations of Christ; next to Thomas Aquinas, the acutest logician the Church has known; a system-maker, like the great Dominican schoolmen, and their common master and oracle, Saint Augustine of Hippo. We see in Cranmer no uncompromising and aggressive reformer like Knox,—controlling by a stern dogmatism both a turbulent nobility and an uneducated people, and filling all classes alike with inextinguishable hatred of everything that even reminded them of Rome. Nor do we find in Cranmer the outspoken and hearty eloquence of Latimer,—appealing to the people at St. Paul's Cross to shake off all the trappings of the "Scarlet Mother," who had so long bewitched the world with her sorceries.

Cranmer, if less eloquent, less fearless, less logical, less able than these, was probably broader, more comprehensive in his views,—adapting his reforms to the circumstances of the age and country, and to the genius of the English mind. Hence his reforms, if less brilliant, were more permanent. He framed the creed that finally was known as the Thirty-nine Articles, and was the true founder of the English Church, as that

— the vicar, and endeared to the people. — Northern Germany — the glorious triumphs of Luther — is and time of Frederick the Great, the heroic inquiries ; and the Genevan as well as the Swiss churches which Calvin controlled, with a dreary and formal Protestant poetry or life. But the Church survived two revolutions and all the thought, and is still a mighty powerful, conservative, yet open to the influences of an age of science and commerce, though a scholastic, seems to me nothing is more misleading and unconvincing than any truth pushed out to conclusions without reference to conditions. They have for their support the same divine authority which is not logic which has built up the institutions, but common-sense and plain sense, — the *coquit*

human life and the history of different ages and nations, and applies to all the mixed sciences, like government and political economy, as well as to church institutions.

As Cromwell made his fortune by advising the King to assume the headship of the Church in England, so Cranmer's rise is to be traced to his advice to Henry to appeal to the decision of universities whether or not he could be legally divorced from Catharine, since the Pope — true to the traditions of the Catholic Church, or from fear of Charles V. — would not grant a dispensation. All this business was a miserable quibble, a tissue of scholastic technicalities. But it answered the ends of Cranmer. The schools decided for the King, and a great injustice and heartless cruelty was done to a worthy and loyal woman, and a great insult offered to the Church and to the Emperor Charles of Germany, who was a nephew of the Spanish Princess and English Queen. This scandal resulted in a separation from Rome, as was foreseen both by Cromwell and Cranmer; and the latter became Archbishop of Canterbury, a prelate whose power and dignity were greater then than at the present day, exalted as the post is even now, — the highest in dignity and rank to which a subject can aspire, — higher even than the Lord High Chancellorship; both of which, however, pale before the position of a Prime Minister so far as power is concerned.

the reign of Henry VIII., unless translation of the Bible, authorization, and the teaching of the Ten Commandments, and the Lord's prayer in English, died in 1546. Cranmer was now left to prosecute reforms in his own name. He was one of the council of regency, Edward was only nine years old, — "a learned boy," as they called him, but still a boy in the hands of those who composed the regency, and a progressive school.

I do not think the career of Cranmer of Henry is sufficiently appreciated. He showed at least extraordinary tact and moderation in his reforming tendencies and endeavored to come in conflict with his sovereign. He had to deal with a cruel and jealous of tyrants; cruel when crossed; a man who rarely repented or remembered a service.

edge. This hard and exacting master Cranmer had to serve, without exciting his suspicions or coming in conflict with him; so that he seemed politic and vacillating, for which he would not be excused were it not for his subsequent services, and his undoubted sincerity and devotion to the Protestant cause. During the life of Henry we can scarcely call Cranmer a reformer. The most noted reformer of the day was old Hugh Latimer, the King's chaplain, who declaimed against sin with the zeal and fire of Savonarola, and aimed to create a religious life among the people, from whom he sprung and whom he loved, — a rough, hearty, honest, conscientious man, with deep convictions and lofty soul.

In the reforms thus far carried on we perceive that, though popular, they emanated from princes and not from the people. The people had no hand in the changes made, as at Geneva, only the ministers of kings and great public functionaries. And in the reforms subsequently effected, which really constitute the English Reformation, they were made by the council of regency, under the leadership of Cranmer and the protectorship of Somerset.

The first thing which the Government did after the accession of Edward VI. was to remove images from the churches, as a form of idolatry, — much to the wrath of Gardiner, Bishop of Winchester, the ablest man

to devotion."

Cranmer, now unchecked, turned other reforms, but proceeded slowly, not wishing to hazard much at the union of both kinds, heretofore the clergy, was appointed; and, closely the Masses were put down. Then a Parliament that the appointment of the Crown alone, and not, as formerly, by the Pope. The next great thing they directed their attention was a new liturgy in the public worship, which gave rise to considerable discussion. They swept away the old form, for it was the work of the sainted doctors of the Church of Rome, and would purge it of all superstitions, and make it as most beautiful and expressive in the Ten Commandments, the Lord's Prayer, the creeds of course were retained, as we are in harmony with primitive usages.

reformation, and complained of the coldness of the clergy, as well as of the general vices of the times. Martin Bucer of Strasburg, at this time professor at Cambridge, also wrote letters to the same effect; but the time had not come for more radical reforms. Then Parliament, controlled by the Government, passed an act allowing the clergy to marry,—opposed, of course, by many bishops in allegiance to Rome. This was a great step in reform, and removed many popular scandals; it struck a heavy blow at the superstitions of the Middle Ages, and showed that celibacy sprung from no law of God, but was Oriental in its origin, encouraged by the popes to cement their throne. And this act concerning the marriage of the clergy was soon followed by the celebrated Forty-two Articles, framed by Cranmer and Ridley, which are the bases of the English Church,—a theological creed, slightly amended afterwards in the reign of Elizabeth; evangelical but not Calvinistic, affirming the great ideas of Augustine and Luther as to grace, justification by faith, and original sin, and repudiating purgatory, pardons, the worship and invocation of saints and images; a larger creed than the Nicene or Athanasian, and comprehensive,—such as most Protestants might accept. Both this and the book of Common Prayer were written with consummate taste, were the work of great scholars,—moderate, broad, enlightened, conciliatory.

which they could understand, and a few preachers arose who appealed to conscience and reason,—like Latimer and Ridley, and Hooper and Taylor; but most of them were formal and cold. There must have been great religious apathy, or else these reforms would have excited more opposition on the part of the clergy, who generally acquiesced in the changes. But the Reformation thus far was official; it was not popular. It repressed vice and superstition, but kindled no great enthusiasm. It was necessary for the English reformers and sincere Protestants to go through a great trial; to be persecuted, to submit to martyrdom for the sake of their opinions. The school of heroes and saints has ever been among blazing fires and scaffolds. It was martyrdom which first gave form and power to early Christianity. The first chapter in the history of the early Church is the torments of the martyrs. The English Reformation had no great dignity or life until the funeral pyres were lighted. Men had placidly accepted new opinions, and had Bibles to instruct them; but it was to be seen how far they would make sacrifices to maintain them.

This test was afforded by the accession of Mary, daughter of Catharine the Spaniard,—an affectionate and kind-hearted woman enough in ordinary times, but a fiend of bigotry, like Catherine de Medicis, when called upon to suppress the Reformation, although on her ac-

rians; and the next thing she does

compared with those who were executed and assassinated in France, about this time, by Catherine de Medicis, the Guises, and Charles IX.

In those dreadful persecutions which began with the accession of Mary, it was impossible that Cranmer should escape. In spite of his dignity, rank, age, and services, he could hope for no favor or indulgence from that morose woman in whose sapless bosom no compassion for the Protestants ever found admission, and still less from those cruel, mercenary, bigoted prelates whom she selected for her ministers. It was not customary in that age for the Roman Church to spare heretics, whether high or low. Would it forgive him who had overturned the consecrated altars, displaced the ritual of a thousand years, and revolted from the authority of the supreme head of the Christian world? Would Mary suffer him to pass unpunished who had displaced her mother from the nuptial bed, and pronounced her own birth to be stained with an ignominious blot, and who had exalted a rival to the throne? And Gardiner and Bonner, too, those bigoted prelates and ministers who would have sent to the flames an unoffending woman if she denied the authority of the Pope, were not the men to suffer him to escape who had not only overturned the papal power in England, but had deprived them of their sees and sent them to the Tower. ting forth of writings contrary to the truth, which I now renounce and refuse, — those things written with my own hand contrary to the truth I thought in my heart, and writ for fear of death and to save my life. And forasmuch as my hand offended in writing contrary to my heart, therefore my hand shall first be punished; for if I come to the fire, it shall first be burned. As for the Pope, I denounce him as Christ's enemy and Antichrist, with all his false doctrines." Then he was carried away, and a great multitude ran after him, exhorting him, while time was, to remember himself. "Coming to the stake," says the Catholic eye-witness, "with a cheerful countenance and willing mind, he took off his garments in haste and stood upright in his shirt. Fire being applied, he stretched forth his right hand and thrust it into the flame, before the fire came to any other part of his body, when his hand was to be seen sensibly burning, he crying with a loud voice, 'This hand hath offended.'"

Thus died Cranmer, in the sixty-seventh year of his age, after presiding over the Church of England above twenty years, and having bequeathed a legacy to his countrymen of which they continue to be proud. He had not the intrepidity of Latimer; he was supple to Henry VIII.; he was weak in his recantation; he was not an original genius, — but he was a man of great breadth of views, conciliating, wise, temperate in re-

and persecutions she encouraged
the seed of a higher morality and

Shall never quench the brand

The triumphs of Gardiner and Bonner
Mary died with a bruised heart and
tion. On her death, and the accession
Elizabeth, exiles returned from Germany
to advocate more radical changes

The Renaissance had begun, and the two movements were incorporated, — the religious one of Germany and the Pagan one of Italy, both favoring liberality of mind, a freer style of literature, restless inquiries, enterprise, the revival of learning and art, an intense spirit of progress, and disgust for the Dark Ages and all the dogmas of scholasticism. With this spirit of progress and moderate Protestantism Elizabeth herself, the best educated woman in England, warmly sympathized, as did also the illustrious men she drew to her court, to whom she gave the great offices of state. I cannot call her age a religious one: it was a merry one, cheerful, inquiring, untrammelled in thought, bold in speculation, eloquent, honest, fervid, courageous, hostile to the Papacy and all the bigots of Europe. It was still rough, coarse, sensual; when money was scarce and industries in their infancy, and material civilization not very attractive. But it was a great age, glorious, intellectual, brilliant; with such statesmen as Burleigh and Walsingham to head off treason and conspiracy; when great poets arose, like Jonson and Spenser and Shakspeare; and philosophers, like Bacon and Sir Thomas Browne; and lawyers, like Nicholas Bacon and Coke; and elegant courtiers, like Sidney and Raleigh and Essex; men of wit, men of enterprise, who would explore distant seas and colonize new countries; yea, great preachers, like Jeremy Taylor and Hall; and

great theologians, like Hooker and Chillingworth, — giving polish and dignity to an uncouth language, and planting religious truth in the minds of men.

Elizabeth, with such a constellation around her, had no great difficulty in re-establishing Protestantism and giving it a new impetus, although she adhered to liturgies and pomps, and loved processions and fêtes and banquets and balls and expensive dresses, — a worldly woman, but progressive and enlightened.

In the religious reforms of that age you see the work of princes and statesmen still, rather than any great insurrection of human intelligence or any great religious revival, although the germs of it were springing up through the popular preachers and the influence of Genevan reformers. Calvin's writings were potent, and John Knox was on his way to Scotland.

I pass by rapidly the reforms of Elizabeth's reign, effected by the Queen and her ministers and the convocation of Protestant bishops and clergy and learned men in the universities. Oxford and Cambridge were then in their glory, — crowded with poor students from all parts of England, who came to study Greek and Latin and read theology, not to ride horses and row boats, to put on dandified airs and sneer at lectures, running away to London to attend theatres and flirt with girls and drink champagne, beggaring their fathers and ruining their own expectations and their

health. In a very short time after the accession of Elizabeth, which was hailed generally as a very auspicious event, things were restored to nearly the state in which they were left by Cranmer in the preceding reign. This was not done by direct authority of the Queen, but by acts of Parliament. Even Henry VIII. ruled through the Parliament, only it was his tool and instrument. Elizabeth consulted its wishes as the representation of the nation, for she aimed to rule by the affections of her people. But she recommended the Parliament to conciliatory measures; to avoid extremes; to drop offensive epithets, like "papist" and "heretic;" to go as far as the wants of the nation required, and no farther. Though a zealous Protestant, she seemed to have no great animosities. Her particular aversion was Bonner, — the violent, blood-thirsty, narrow-minded Bishop of London, who was deprived of his see and shut up in the Tower, put out of harm's way, not cruelly treated, — he was not even deprived of his good dinners. She appointed, as her prerogative allowed, a very gentle, moderate, broad, kind-hearted man to be Archbishop of Canterbury, — Parker, who had been chaplain to her mother, and who was highly esteemed by Burleigh and Nicholas Bacon, her most influential ministers. Parliament confirmed the old act, passed during the reign of Henry VIII., making the sovereign the head of the English Church, although

the title of "supreme head" was left out in the oath of allegiance, to conciliate the Catholic party. To execute this supremacy, the Court of High Commission was established, — afterwards so abused by Charles I. The Church Service was modified, and the Act of Uniformity was passed by Parliament, after considerable debate. The changes were all made in the spirit of moderation, and few suffered beyond a deprivation of their sees or livings for refusing to take the oath of supremacy.

Then followed the Thirty-nine Articles, setting forth the creed of the Established Church, — substantially the creed which Cranmer had made, — and a new translation of the Bible, and the regulation of ecclesiastical courts.

But whatever was done was in good taste, — marked by good sense and moderation, — to preserve decency and decorum, and repress all extremes of superstition and license. The clergy preached in a black gown and Genevan bands, using the surplice only in the liturgy; we see no lace or millinery. The churches were stripped of images, the pulpits became high and prominent, the altars were changed to communion-tables without candles and symbols. There was not much account made of singing, for the lyric version of the Psalms was execrable. For the first time since Chrysostom and Gregory Nazianzen, preaching became the chief duty of

the clergyman; and his sermons were long, for the people were greedy of instruction, and were not critical of artistic merits. Among other things of note, the exiles were recalled, who brought back with them the learning of the Continent and the theology of Geneva, and an intense hatred for all the old forms of superstition, — images, crucifixes, lighted candles, Catholic vestments, — and a supreme regard for the authority of the Scriptures, rather than the authority of the Church.

These men, mostly learned and pious, were not contented with the restoration as effected by Elizabeth's reformers, — they wanted greater simplicity of worship and a more definite and logical creed; and they made a good deal of trouble, being very conscientious and somewhat narrow and intolerant. So that, after the re-establishment of Protestantism, the religious history of the reign is chiefly concerned with the quarrels and animosities within the Church, particularly about vestments and modes of worship, — things unessential, minute, technical, — which led to great acerbity on both sides, and to some persecution; for these quarrels provoked the Queen and her ministers, who wanted peace and uniformity. To the Government it seemed strange and absurd for these returned exiles to make such a fuss about a few externals; to these intensified Protestants it seemed harsh and cruel that Government should insist on such a rigid uniformity, and

punish them for not doing as they were bidden by the bishops.

So they separated from the Established Church, and became what were called Non-conformists, — having not only disgust of the decent ritualism of the Church, but great wrath for the bishops and hierarchy and spiritual courts. They also disapproved of the holy days which the Church retained, and the prayers and the cathedral style of worship, the use of the cross in baptism, god-fathers and god-mothers, the confirmation of children, kneeling at the sacrament, bowing at the name of Jesus, the ring in marriage, the surplice, the divine right of bishops, and some other things which reminded them of Rome, for which they had absolute detestation, seeing in the old Catholic Church nothing but abominations and usurpations, no religion at all, only superstition and anti-Christian government and doctrine, — the reign of the beast, the mystic Babylon, the scarlet mother revelling in the sorceries of ancient Paganism. These terrible animosities against even the shadows and resemblances of what was called Popery were increased and intensified by the persecution and massacres which the Catholics about this time were committing on the Protestants in France and Germany and the Low Countries, and which filled the people of England, — especially the middle and lower classes, — with fear, alarm, anger, and detestation.

I will not enter upon the dissensions which so early crept into the English Church, and led to a separation or a schism, whatever name it goes by,—to most people in these times not very interesting or edifying, because they were not based on any great ideas of universal application, and seeming to such minds as Bacon and Parker and Jewell rather narrow and frivolous.

The great Puritan controversy would have no dignity if it were confined to vestments and robes and forms of worship, and hatred of ceremonies and holy days, and other matters which seemed to lean to Romanism. But the grandeur and the permanence of the movement were in a return to the faith of the primitive Church and a purer national morality, and to the unrestricted study of the Bible, and the exaltation of preaching and Christian instruction over forms and liturgies and antiphonal chants; above all, the exaltation of reason and learning in the interpretation of revealed truth, and the education of the people in all matters which concern their temporal or religious interests, so that a true and rapid progress was inaugurated in civilization itself, which has peculiarly marked all Protestant countries having religious liberty. Underneath all these apparently insignificant squabbles and dissensions there were two things of immense historical importance: first, a spirit of intolerance on the part of government and of church dignitaries,—the State allied with the

Church forcing uniformity with their decrees, and severely punishing those who did not accept them, — in matters beyond all worldly authority; and, secondly, a rising spirit of religious liberty, determined to assert its glorious rights at any cost or hazard, and especially defended by the most religious and earnest part of the clergy, who were becoming Calvinistic in their creed, and were pushing the ideas of the Reformation to their utmost logical sequence. This spirit was suppressed during the reign of Elizabeth, out of general respect and love for her as a Queen, and the external dangers to which the realm was exposed from Spain and France, which diverted the national mind. But it burst out fiercely in the next reigns, under James and Charles, about the beginning of the seventeenth century. And this is the last development of the Reformation in England to which I can allude, — the great Puritan contest for liberty of worship, running, when opposed unjustly and cruelly, into a contest for civil liberty; that is, the right to change forms and institutions of civil government, even to the dethronement of kings, when it was the expressed and declared will of the people, in whom was vested the ultimate source of sovereignty.

But here I must be brief. I tread on familiar ground, made familiar by all our literature, especially by the most brilliant writer of modern times, though not the greatest philosopher: I mean that great artist and

word-painter Macaulay, whose chief excellence is in making clear and interesting and vivid, by a world of illustration and practical good sense and marvellous erudition, what was obvious to his own objective mind, and obvious also to most other enlightened people not much interested in metaphysical disquisitions. No man more than he does justice to the love of liberty which absolutely burned in the souls of the Puritans, — that glorious party which produced Milton and Cromwell, and Hampden and Bunyan, and Owen and Calamy, and Baxter and Howe.

The chief peculiarity of those Puritans — once called Non-conformists, afterwards Presbyterians and Independents — was their reception of the creed of John Calvin, the clearest and most logical intellect that the Reformation produced, though not the broadest; who reigned as a religious dictator at Geneva and in the Reformed churches of France, and who gave to John Knox the positivism and sternness and rigidity which he succeeded in impressing upon the churches of Scotland. And the peculiar doctrines which marked Calvin and his disciples were those deduced from the majesty of God and the comparative littleness of man, leading to and bound up with the impotence of the will, human dependence, the necessity of Divine grace, — Augustinian in spirit, but going beyond Augustine in the subtlety of metaphysical distinctions and dissertations on free-will,

election, and predestination, — unfathomable, but exceedingly attractive subjects to the divines of the seventeenth century, creating a metaphysical divinity, a theology of the brain rather than of the heart, a brilliant series of logical and metaphysical deductions from established truths, demanding to be received with the same unhesitating obedience as the truths, or Bible declarations, from which they are deduced. The greatness of human reason was never more forcibly shown than in these deductions; but they were carried so far as to insult reason itself and mock the consciousness of mankind; so that mankind rebelled against the very force of the highest reasonings of the human intellect, because they pushed logical sequence into absurdity, or to dreadful conclusions: "*Decretum quidem horribile fateor*," said the great master himself.

The Puritans were trained in this theology, which developed the loftiest virtues and the severest self-constraints; making them both heroes and visionaries, always conscientious and sometimes repulsive; fitting them for gigantic tasks and unworthy squabbles; driving them to the Bible, and then to acrimonious discussions; creating fears almost mediæval; leading them to technical observation of religious duties, and transforming the most genial and affectionate people under the sun into austere saints, with whom the most ascetic of monks would have had but little sympathy.

I will not dwell on those peculiarities which Macaulay ridicules and Taine repeats, — the hatred of theatres and assemblies and symbolic festivals and bell-rings, the rejection of the beautiful, the elongated features, the cropped hair, the unadorned garments, the proscription of innocent pleasures, the nasal voice, the cant phrases, the rigid decorums, the strict discipline, — these, doubtless exaggerated, were more than balanced by the observance of the Sabbath, family prayers, temperate habits, fervor of religious zeal, strict morality, allegiance to duty, and the perpetual recognition of God Almighty as the sovereign of this world, to whom we are responsible for all our acts and even our thoughts. They formed a noble material on which every emancipating idea could work; men trained by persecutions to self-sacrifice and humble duties, — making good soldiers, good farmers, good workmen in every department, honest and sturdy, patient and self-reliant, devoted to their families though not demonstrative of affection; keeping the Sunday as a day of worship rather than rest or recreation, cherishing as the dearest and most sacred of all privileges the right to worship God according to the dictates of conscience enlightened by the Bible, and willing to fight, even amid the greatest privations and sacrifices, to maintain this sacred right and transmit it to their children. Such were the men who fought the battles of civil liberty under Cromwell,

and colonized the most sterile of all American lands, making the dreary wilderness to blossom with roses, and sending out the shoots of their civilization to conserve more fruitful and favored sections of the great continent which God gave them, to try new experiments in liberty and education.

I need not enumerate the different sects into which these Puritans were divided, so soon as they felt they had the right to interpret Scripture for themselves. Nor would I detail the various and cruel persecutions to which these sects were subjected by the government and the ecclesiastical tribunals, until they rose in indignation and despair, and rebelled against the throne, and made war on the King, and cut off his head; all of which they did from fear and for self-defence, as well as from vengeance and wrath.

Nor can I describe the counter reformation, the great reaction which succeeded to the violence of the revolution. The English reformation was not consummated until constitutional liberty was heralded by the reign of William and Mary, when the nation became almost unanimously Protestant, with perfect toleration of religious opinions, although the fervor of the Puritans had passed away forever, leaving a residuum of deep-seated popular antipathy to all the institutions of Romanism and all the ideas of the Middle Ages. The English reformation began with princes, and ended

with the agitations of the people. The German reformation began with the people, and ended in the wars of princes. But both movements were sublime, since they showed the force of religious ideas. Civil liberty is only one of the sequences which exalt the character and dignity of man amid the seductions and impediments of a gilded material life.

IGNATIUS LOYOLA.

RISE AND INFLUENCE OF THE JESUITS.

A. D. 1491-1556.

13*

XXXII.

IGNATIUS LOYOLA.

RISE AND INFLUENCE OF THE JESUITS.

NEXT to the Protestant Reformation itself, the most memorable moral movement in the history of modern times was the counter reformation in the Roman Catholic Church, finally effected, in no slight degree, by the Jesuits. But it has not the grandeur or historical significance of the great insurrection of human intelligence which was headed by Luther. It was a revival of the pietism of the Middle Ages, with an external reform of manners. It was not revolutionary; it did not cast off the authority of the popes, nor disband the monasteries, nor reform religious worship: it rather tended to strengthen the power of the popes, to revive monastic life, and to perpetuate the forms of worship which the Middle Ages had established. No doubt a new religious life was kindled, and many of the flagrant abuses of the papal empire were redressed, and the lives of the clergy made more decent, in accordance with the revival of intelligence. Nor did it

disdain literature or art, or any form of modern civilization, but sought to combine progress with old ideas; it was an effort to adapt the Roman theocracy to changing circumstances, and was marked by expediency rather than right, by zeal rather than a profound philosophy.

This movement took place among the Latin races, — the Italians, French, and Spaniards, — having no hold on the Teutonic races except in Austria, as much Slavonic as German. It worked on a poor material, morally considered; among peoples who have not been distinguished for stamina of character, earnestness, contemplative habits, and moral elevation, — peoples long enslaved, frivolous in their pleasures, superstitious, indolent, fond of fêtes, spectacles, pictures, and Pagan reminiscences.

The doctrine of justification by faith was not unknown, even in Italy. It was embraced by many distinguished men. Contarini, an illustrious Venetian, wrote a treatise on it, which Cardinal Pole admired. Folengo ascribed justification to grace alone; and Vittoria Colonna, the friend of Michael Angelo, took a deep interest in these theological inquiries. But the doctrine did not spread; it was not understood by the people, — it was a speculation among scholars and doctors, which gave no alarm to the Pope. There was even an attempt at internal reform under Paul III. of

the illustrious family of the Farnese, successor of Leo X. and Clement VII., the two renowned Medicean popes. He made cardinals of Contarini, Caraffa, Sadoleto, Pole, Giberto, — all men imbued with Protestant doctrines, and very religious; and these good men prepared a plan of reform and submitted it to the Pope, which ended, however, only in new monastic orders.

It was then that Ignatius Loyola appeared upon the stage, when Luther was in the midst of his victories, and when new ideas were shaking the pontifical throne. The desponding successor of the Gregories and the Clements knew not where to look for aid in that crisis of peril and revolution. The monastic orders composed his regular army, but they had become so corrupted that they had lost the reverence of the people. The venerable Benedictines had ceased to be men of prayer and contemplation as in the times of Bernard and Anselm, and were revelling in their enormous wealth. The cloisters of Cluniacs and Cistercians — branches of the Benedictines — were filled with idle and dissolute monks. The famous Dominicans and Franciscans, who had rallied to the defence of the Papacy three centuries before, — those missionary orders that had filled the best pulpits and the highest chairs of philosophy in the scholastic age, — had become inexhaustible subjects of sarcasm and mockery, for they were peddling relics and indulgences, and quarrelling among themselves. They

were hated as inquisitors, despised as scholastics, and deserted as preachers; the roads and taverns were filled with them. Erasmus laughed at them, Luther abused them, and the Pope reproached them. No hope from such men as these, although they had once been renowned for their missions, their zeal, their learning, and their preaching.

At this crisis Loyola and his companions volunteered their services, and offered to go wherever the Pope should send them, as preachers, or missionaries, or teachers, instantly, without discussion, conditions, or rewards. So the Pope accepted them, made them a new order of monks; and they did what the Mendicant Friars had done three hundred years before,—they fanned a new spirit, and rapidly spread over Europe, over all the countries to which Catholic adventurers had penetrated, and became the most efficient allies that the popes ever had.

This was in 1540, six years after the foundation of the Society of Jesus had been laid on the Mount of Martyrs, in the vicinity of Paris, during the pontificate of Paul III. Don Iñigo Lopez de Recalde Loyola, a Spaniard of noble blood and breeding, at first a page at the court of King Ferdinand, then a brave and chivalrous soldier, was wounded at the siege of Pampeluna. During a slow convalescence, having read all the romances he could find, he took up the “Lives of the

Saints," and became fired with religious zeal. He immediately forsook the pursuit of arms, and betook himself barefooted to a pilgrimage. He served the sick in hospitals; he dwelt alone in a cavern, practising austerities; he went as a beggar on foot to Rome and to the Holy Land, and returned at the age of thirty-three to begin a course of study. It was while completing his studies at Paris that he conceived and formed the "Society of Jesus."

From that time we date the counter reformation. In fifty years more a wonderful change took place in the Catholic Church, wrought chiefly by the Jesuits. Yea, in sixteen years from that eventful night — when far above the star-lit city the enthusiastic Loyola had bound his six companions with irrevocable vows — he had established his Society in the confidence and affection of Catholic Europe, against the voice of universities, the fears of monarchs, and the jealousy of the other monastic orders. In sixteen years, this ridiculed and wandering Spanish fanatic had risen to a condition of great influence and dignity, second only in power to the Pope himself; animating the councils of the Vatican, moving the minds of kings, controlling the souls of a numerous fraternity, and making his influence felt in every corner of the world. Before the remembrance of his passionate eloquence, his eyes of fire, and his countenance of seraphic piety had passed away

beautifully likened by Doctor Williams to the chariot in the Prophet's vision: "The spirit of the living creatures was in the wheels; wherever the living creatures went, the wheels went with them; wherever those stood, these stood: when the living creatures were lifted up, the wheels were lifted up over against them; and their wings were full of eyes round about, and they were so high that they were dreadful. So of the institution of Ignatius,—one soul swayed the vast mass; and every pin and every cog in the machinery consented with its whole power to every movement of the one central conscience."

Luther moved Europe by ideas which emancipated the millions, and set in motion a progress which is the glory of our age; Loyola invented a machine which arrested this progress, and drove the Catholic world back again into the superstitions and despotisms of the Middle Ages, retaining however the fear of God and of Hell, which some among the Protestants care very little about.

What is the secret of such a wonderful success? Two things: first, the extraordinary virtues, abilities, and zeal of the early Jesuits; and, secondly, their wonderful machinery in adapting means to an end.

The history of society shows that no body of men ever obtained a wide-spread ascendancy, never secured general respect, unless they deserved it. Industry produces its fruits; learning and piety have their natural

So of the Jesuits, — there is no mystery in their success; the same causes would produce the same results again. When Catholic Europe saw men born to wealth and rank voluntarily parting with their goods and honors; devoting themselves to religious duties, often in a humble sphere; spending their days in schools and hospitals; wandering as preachers and missionaries amid privations and in fatigue; encountering perils and dangers and hardships with fresh and ever-sustained enthusiasm; and finally yielding up their lives as martyrs, to proclaim salvation to idolatrous savages, — it knew them to be heroic, and believed them to be sincere, and honored them in consequence. When parents saw that the Jesuits entered heart and soul into the work of education, winning their pupils' hearts by kindness, watching their moods, directing their minds into congenial studies, and inspiring them with generous sentiments, they did not stop to pry into their motives; and universities, when they discovered the superior culture of educated Jesuits, outstripping all their associates in learning, and shedding a light by their genius and erudition, very naturally appointed them to the highest chairs; and even the people, when they saw that the Jesuits were not stained by vulgar vices, but were hard-working, devoted to their labors, earnest, and eloquent, put themselves under their teachings; and especially when they added gentlemanly manners,

die," said Xavier, when about to visit the cannibal Island of Del Moro, "who knows but what all may receive the Gospel, since it is most certain it has ever fructified more abundantly in the field of Paganism by the blood of martyrs than by the labors of missionaries," — a sublime truth, revealed to him in his whole course of protracted martyrdom and active philanthropy, especially in those last hours when, on the Island of Sanshan, he expired, exclaiming, as his fading eyes rested on the crucifix, *In te Domine speravi, non confundar in eternum*. In perils, in fastings, in fatigues, was the life of this remarkable man passed, in order to convert the heathen world; and in ten years he had traversed a tract of more than twice the circumference of the earth, preaching, disputing, and baptizing, until seventy thousand converts, it is said, were the fruits of his mission."¹ "My companion," said the fearless Marquette, when exploring the prairies of the Western wilderness, "is an envoy of France to discover new countries, and I am an ambassador of God to enlighten them with the Gospel." L'Allemand, when pierced with the arrows of the Iroquois, rejoiced that his martyrdom would induce others to follow his example. The missions of the early Jesuits extorted praises from Baxter and panegyric from Leibnitz.

ment never surpassed in the power of its mechanism to bind the minds and wills of men. Loyola was a most extraordinary man in the practical turn he gave to religious rhapsodies; creating a legislation for his Society which made it the most potent religious organization in the world. All his companions were remarkable likewise for different traits and excellences, which yet were made to combine in sustaining the unity of this moral mechanism. Lainez had even a more comprehensive mind than Loyola. It was he who matured the Jesuit Constitution, and afterwards controlled the Council of Trent, — a convocation which settled the creed of the Catholic Church, especially in regard to justification, and which admitted the merits of Christ, but attributed justification to good works in a different sense from that understood and taught by Luther.

Aside from the personal gifts and qualities of the early Jesuits, they would not have so marvellously succeeded had it not been for their remarkable constitution, — that which bound the members of the Society together, and gave to it a peculiar unity and force. The most marked thing about it was the unbounded and unhesitating obedience required of every member to superiors, and of these superiors to the General of the Order, — so that there was but one will. This law of obedience is, as every one knows, one of the fundamental principles of all the monastic orders from the

by his Superior; he was less than a private soldier in an army; he was a piece of wax to be moulded as the Superior directed,—and the Superior, in his turn, was a piece of wax in the hands of the Provincial, and he again in the hands of the General. “There were many gradations in rank, but every rank was a gradation in slavery.” The Jesuit is accused of having no individual conscience. He was bound to do what he was told, right or wrong; nothing was right and nothing was wrong except as the Society pronounced. The General stood in the place of God. That man was the happiest who was most mechanical. Every novice had a monitor, and every monitor was a spy.¹ So strict was the rule of Loyola, that he kept Francis Borgia, Duke of Candia, three years out of the Society, because he refused to renounce all intercourse with his family.²

The Jesuit was obliged to make all natural ties subordinate to the will of the General. And this General was a king more absolute than any worldly monarch, because he reigned over the minds of his subjects. His kingdom was an *imperium in imperio*; he was chosen for life and was responsible to no one, although he ruled for the benefit of the Catholic Church. In one sense a General of the Jesuits resembled the prime minister of an absolute monarch,—say such a man as Richelieu, with unfettered power in the cause of abso-

chinery, the *régime*, of the Jesuits, not of their character, not of their virtues or vices. This organization is to be spoken of as we speak of the discipline of an army, — wise or unwise, as it reached its end. The original aim of the Jesuits was the restoration of the Papal Church to its ancient power; and for one hundred years, as I think, the restoration of morals, higher education, greater zeal in preaching: in short, a reformation within the Church. Jesuitism was, of course, opposed to Protestantism; it hated the Protestants; it hated their religious creed and their emancipating and progressive spirit; it hated religious liberty.

I need not dwell on other things which made this order of monks so successful, — not merely their virtues and their mechanism, but their adaptation to the changing spirit of the times. They threw away the old dresses of monastic life; they quitted the cloister and places of meditation; they were preachers as well as scholars; they accommodated themselves to the circumstances of the times; they wore the ordinary dress of gentlemen; they remained men of the world, of fine manners and cultivated speech; there was nothing ascetic or repulsive about them, like other monks; they were all things to all men, like politicians, in order to accomplish their ends; they never were lazy, or profligate or luxurious. If their Order became enriched, they as individuals remained poor. The inferior members were

discipline. John Wesley learned something; the Independents learned very little.

But there is another side to the Jesuits. We have seen why they succeeded; we have to inquire how they failed. If history speaks of the virtues of the early members, and the wonderful mechanism of their Order, and their great success in consequence, it also speaks of the errors they committed, by which they lost the confidence they had gained. From being the most popular of all the adherents of the papal power, and of the ideas of the Dark Ages, they became the most unpopular; they became so odious that the Pope was obliged, by the pressure of public opinion and of the Bourbon courts of Europe, to suppress their Order. The fall of the Jesuits was as significant as their rise. I need not dwell on that fall, which is one of the best known facts of history.

Why did the Jesuits become unpopular and lose their influence?

They gained the confidence of Catholic countries because they deserved it, and they lost that confidence because they deserved to lose it,—in other words, because they became corrupt; and this seems to be the history of all institutions. It is strange, it is passing strange, that human societies and governments and institutions should degenerate as soon as they become

a simple life and lofty religious enthusiasm for materialistic enjoyments and epicurean display? Is there a true advance in a university, when it exchanges its theological teachings and its preparation of poor students for the Gospel Ministry, for Schools of Technology and boat-clubs and accommodations for the sons of the rich and worldly?

Now the Society of Jesus went through just such a transformation as has taken place, almost within the memory of living men, in the life and habits and ideas of the people of Boston and Philadelphia and in the teachings of their universities. Some may boldly say, "Why not? This change indicates progress." But this progress is exactly similar to that progress which the Jesuits made in the magnificence of their churches, in the wealth they had hoarded in their colleges, in the fashionable character of their professors and confessors and preachers, in the adaptation of their doctrines to the taste of the rich and powerful, in the elegance and arrogance and worldliness of their dignitaries. Father La Chaise was an elegant and most polished man of the world, and travelled in a coach with six horses. If he had not been such a man, he would not have been selected by Louis XIV. for his confidential and influential confessor. The change which took place among the Jesuits arose from the same causes as the change which has taken place among Methodists and Quakers and

But the prosperity which the Jesuits had earned during their first century of existence excited only envy, and destroyed the reverence of the people; it had not made them odious, detestable. It was the means they adopted to perpetuate their influence, after early virtues had passed away, which caused enlightened Catholic Europe to mistrust them, and the Protestants absolutely to hate and vilify them.

From the very first, the Society was distinguished for the *esprit de corps* of its members. Of all things which they loved best it was the power and glory of the Society,—just as Oxford Fellows love the *prestige* of their university. And this power and influence the Jesuits determined to preserve at all hazards and by any means; when virtues fled, they must find something else with which to bolster themselves up: they must not part with their power; the question was, how should they keep it?

First, they adopted the doctrine of expediency,—that the end justifies the means. They did not invent this sophistry,—it is as old as our humanity. Abraham used it when he told lies to the King of Egypt, to save the honor of his wife; Cæsar accepted it, when he vindicated imperialism as the only way to save the Roman Empire from anarchy; most politicians resort to it when they wish to gain their ends. Politicians have ever been as unscrupulous as the Jesuits, in adopting

ard. They did not openly justify

accepted, because these swelled their numbers. They gave the crucifix, which covered up all sins; they permitted their converts to retain their ancient habits and customs. In order to be popular, Robert de Nobili, it is said, traced his lineage to Brahma; and one of their missionaries among the Indians told the savages that Christ was a warrior who scalped women and children. Anything for an outward success. Under their teachings it was seen what a light affair it was to bear the yoke of Christ. So monarchs retained in their service confessors who imposed such easy obligations. So ordinary people resorted to the guidance of such leaders, who made themselves agreeable. The Jesuit colleges were filled with casuists. Their whole moral philosophy, if we may believe Arnauld and Pascal, was a tissue of casuistry; truth was obscured in order to secure popularity; even the most diabolical persecution was justified if heretics stood in the way. Father Le Tellier rejoiced in the slaughter of Saint Bartholomew, and *Te Deums* were offered in the churches for the extinction of Protestantism by any means. If it could be shown to be expedient, the Jesuits excused the most outrageous crimes ever perpetrated on this earth.

Again, the Jesuits are accused of riveting fetters on the human mind in order to uphold their power, and to sustain the absolutism of the popes and the absolutism of kings, to which they were equally devoted. They taught

Bacon; they detested the philosophy of the way for the French Revolution; they detested the Protestant idea of private judgment; they opposed the progress of human thought, and the Jansenist movement in the Netherlands, and of the French Revolution in France; they upheld the absolutism of Louis XIV and the English Revolution; they sent missionaries to England to undermine the throne of James II and build up the throne of Charles I. The Jesuit idea, in politics and in religion, though it was not, were many things in their system that were commended; they were good classical teachers; they taught Greek and Latin admirably; they trained the memory; they made study pleasant; they did not develop genius. The order never was a philosopher; the energies of its members were concentrated in imposing a despotic yoke.

The Jesuits are accused further of this is a common charge.

archs. Mary of Scotland was a tool in their hands, and so was Madame de Maintenon in France. La Chaise and Le Tellier were mere politicians. The Jesuits were ever political priests; the history of Europe the last three hundred years is full of their cabals. Their political influence was directed to the persecution of Protestants as well as infidels. They are accused of securing the revocation of the Edict of Nantes,—one of the greatest crimes in the history of modern times, which led to the expulsion of four hundred thousand Protestants from France, and the execution of four hundred thousand more. They incited the dragonnades of Louis XIV., who was under their influence. They are accused of the assassination of kings, of the fires of Smithfield, of the Gunpowder Plot, of the cruelties inflicted by Alva, of the Thirty Years' War, of the ferocities of the Guises, of inquisitions and massacres, of sundry other political crimes, with what justice I do not know; but certain it is they became objects of fear, and incurred the hostilities of Catholic Europe, especially of all liberal thinkers, and their downfall was demanded by the very courts of Europe. Why did they lose their popularity? Why were they so distrusted and hated? The fact that they *were* hated is most undoubted, and there must have been cause for it. It is a fact that at one time they were respected and honored, and deserved to be so: must there not

the Jesuits. Their most powerful and bitter foe was a woman,—the mistress of Louis XV., the infamous Madame de Pompadour. She hated the Jesuits as Catharine de Medici hated the Calvinists in the time of Charles IX.,—not because they were friends of absolutism, not because they wrote casuistic books, not because they opposed liberal principles, not because they were spies and agents of Rome, not because they perverted education, not because they were boastful and mercenary missionaries or cunning intriguers in the courts of princes, not because they had marked their course through Europe in a trail of blood, but because they were hostile to her ascendancy, — a woman who exercised about the same influence in France as Jezebel did at the court of Ahab. I respect the Jesuits for the stand they took against this woman: it is the best thing in their history. But here they did not show their usual worldly wisdom, and they failed. They were judicially blinded. The instrument of their humiliation was a wicked woman. So strange are the ways of Providence! He chose Esther to save the Jewish nation, and a harlot to punish the Jesuits. She availed herself of their mistakes.

It seems that the Superior of the Jesuits at Martinique failed; for the Jesuits embarked in commercial speculations while officiating as missionaries. The angry creditors of La Valette, the Jesuit banker, demanded

ganelli. So that in 1773, by a papal decree, the Order was suppressed ; 669 colleges were closed ; 223 missions were abandoned, and more than 22,000 members were dispersed. I do not know what became of their property, which amounted to about two hundred millions of dollars, in the various countries of Europe.

This seems to me to have been a clear case of religious persecution, incited by jealous governments and the infidel or the progressive spirit of the age, on the eve of the French Revolution. It simply marks the hostilities which, for various reasons, they had called out. I am inclined to think that their faults were greatly exaggerated ; but it is certain that so severe and high-handed a measure would not have been taken by the Pope had it not seemed to him necessary to preserve the peace of the Church. Had they been innocent, the Pope would have lost his throne sooner than commit so great a wrong on his most zealous servants. It is impossible for a Protestant to tell how far they were guilty of the charges preferred against them. I do not believe that their lives, as a general thing, were a scandal sufficient to justify so sweeping a measure ; but their institution, their régime, their organization, their constitution, were deemed hostile to liberty and the progress of society. And if zealous governments — Catholic princes themselves — should feel that the Jesuits were opposed to the true progress

Catholics for their virtues and intelligence, whatever may be the machinery of their organization, they will retain their power; and not until they interfere with elections and Protestant schools, or teach dangerous doctrines of public morality, has our Government any right to interfere with them. They will stand or fall as they win the respect or excite the wrath of enlightened nations. But the principles they are supposed to defend, — expediency, casuistry, and hostility to free inquiry and the circulation of the Scriptures in vernacular languages, — these are just causes of complaint and of unrelenting opposition among all those who accept the great ideas of the Protestant Reformation, since they are antagonistic to what we deem most precious in our institutions. So long as the contest shall last between good and evil in this world, we have a right to declaim against all encroachments on liberty and sound morality and an evangelical piety from any quarter whatever, and we are recreant to our duties unless we speak our minds. Hence, from the light I have, I pronounce judgment against the Society of Jesus as a dangerous institution, unfortunately planted among us, but which we cannot help, and can attack only with the weapons of reason and truth.

And yet I am free to say that for my part I prefer even the Jesuit discipline and doctrines, much as I dislike them, to the unblushing infidelity which has

JOHN CALVIN.

PROTESTANT THEOLOGY.

A. D. 1509-1564.

XXXIII.

JOHN CALVIN.

PROTESTANT THEOLOGY.

JOHN CALVIN was pre-eminently the theologian of the Reformation, and stamped his genius on the thinking of his age, — equally an authority with the Swiss, the Dutch, the Huguenots, and the Puritans. His vast influence extends to our own times. His fame as a benefactor of mind is immortal, although it cannot be said that he is as much admired and extolled now as he was fifty years ago. Nor was he ever a favorite with the English Church. He has been even grossly misrepresented by theological opponents; but no critic or historian has ever questioned his genius, his learning, or his piety. No one denies that he has exerted a great influence on Protestant countries. As a theologian he ranks with Saint Augustine and Thomas Aquinas, — maintaining essentially the same views as those held by these great lights, and being distinguished for the same logical power; reigning like them as an intellectual dictator in the schools, but not so interesting as they were

party in France. In 1533 he went to Paris, then as always the centre of the national life, where the new ideas were creating great commotion in scholarly and ecclesiastical circles, and even in the court itself. Giving offence to the doctors of the Sorbonne for his evangelical views as to Justification, he was obliged to seek refuge with the Queen of Navarre, whose castle at Pau was the resort of persecuted reformers. After leading rather a fugitive life in different parts of France, he retreated to Switzerland, and at twenty-six published his celebrated "Institutes," which he dedicated to Francis I., hoping to convert him to the Protestant faith. After a short residence in Italy, at the court of the Duchess of Ferrara, he took up his abode at Geneva, and his great career began.

Geneva, a city of the Allobroges in the time of Cæsar, possessed at this time about twenty thousand inhabitants, and was a free state, having a constitution somewhat like that of Florence when it was under the control of Savonarola. It had rebelled against the Duke of Savoy, who seems to have been in the fifteenth century its patron ruler. The government of this little Savoyard state became substantially like that which existed among the Swiss cantons. The supreme power resided in the council of Two Hundred, which alone had the power to make or abolish laws. There was a lesser council of Sixty, for diplomatic objects only.

But the reformed doctrine
 Zurich, Berne, and Basle

of the ministers that they refused to administer the sacraments. This created such a ferment that the syndics expelled Calvin and Farel from the city. They went at first to Berne, but the Bernese would not receive them. They then retired to Basle, wearied, wet, and hungry, and from Basle they went to Strasburg. It was in this city that Calvin dwelt three years, spending his time in lecturing on divinity, in making contributions to exegetical theology, in perfecting his "Institutes," forming a close alliance with Melancthon and other leading reformers. So pre-occupied was he with his labors as a commentator of the Scriptures, that he even contemplated withdrawing from the public service of religion.

Calvin was a scholar as well as theologian, and quiet labors in his library were probably more congenial to his tastes than active parochial duties. His highest life was amid his books, in serene repose and lofty contemplation. At this time he had an extensive correspondence, his advice being much sought for its wisdom and moderation. His judgment was almost unerring, since he was never led away by extravagances or enthusiasm: a cold, calm man even among his friends and admirers. He had no passions; he was all intellect. It would seem that in his exile he gave lectures on divinity, being invited by the Council of Strasburg; and also interested himself in reference to the Sacra-

where he dwelt.

Berengar. Nor was Luther fully emancipated from the Catholic doctrine, modifying without essentially changing it. Calvin maintained that "This is my body" meant that it signified "my body." In regard to original sin and free-will, as represented by Augustine, there was no dispute; but much difficulty attended the interpretation of the doctrine of Justification. The greatest difficulty was in reference to the doctrine of Transubstantiation, which was rejected by the reformers because it had not the sanction of the Scriptures; and when it was found that this caused insuperable difficulties about the Lord's Supper, it was thought useless to proceed to other matters, like confession, masses for the dead, and the withholding the cup from the laity. There was not so great a difference between the Catholic and Protestant theologians concerning the main body of dogmatic divinity as is generally supposed. The fundamental questions pertaining to God, the Trinity, the mission and divinity of Christ, original sin, free-will, grace, predestination, had been formulated by Thomas Aquinas with as much severity as by Calvin. The great subjects at issue, in a strictly theological view, were Justification and the Eucharist. Respecting free-will and predestination, the Catholic theologians have never been agreed among themselves,—some siding with Augustine, like Aquinas, Bernard, and Anselm; and some with Pelagius, like Abélard and Lainez the Jesuit at the

now the established faith of
Church.

After the Diet of Ratisbon, Geneva, at the eager desire of the Council summoned him to return raised for him. "Calvin, that is the man," they said, "it is he whom the minister of the Lord." Yet return; he preferred his quiet life obeyed the voice of conscience. In September, 1541, he returned to his place and was received by the whole city with a demonstration of respect; and a cloth of gold as a present, which he seemed to

The same year he was married to Ide Burie, who was a worthy, well-read man, with whom he lived happily till her death. She was superior to Lorraine Bora, in culture and dignity, a woman of

much of. When his wife died it seems he mourned for her with decent grief, but did not seek a second marriage, perhaps because he was unable to support a wife on his small stipend as she would wish and expect. He rather courted poverty, and refused reasonable gratuities. His body was attenuated by fasting and study, like that of Saint Bernard. When he was completing his "Institutes," he passed days without eating and nights without sleeping. And as he practised poverty he had a right to inculcate it. He kept no servant, lived in a small tenement, and was always poorly clad. He derived no profit from any of his books, and the only present he ever consented to receive was a silver goblet from the Lord of Varennes. Luther's stipend was four hundred and fifty florins; and he too refused a yearly gift from the booksellers of four hundred dollars, not wishing to receive a gratuity for his writings. Calvin's salary was only fifty dollars a year, with a house, twelve measures of corn, and two pipes of wine; for tea and coffee were then unknown in Europe, and wine seems to have been the usual beverage, after water. He was pre-eminently a conscientious man, not allowing his feelings to sway his judgment. He was sedate and dignified and cheerful; though Bossuet accuses him of a surly disposition,—*un genre triste, un esprit chagrin*. Though formal and stern, women never shrank from familiar conversation

with him on the subject of religion. Though intolerant of error, he cherished no personal animosities. Calvin was more refined than Luther, and never like him gave vent to coarse expressions. He had not Luther's physical strength, nor his versatility of genius; nor as a reformer was he so violent. "Luther aroused; Calvin tranquillized." The one stormed the great citadel of error, the other furnished the weapons for holding it after it was taken. The former was more popular; the latter appealed to a higher intelligence. The Saxon reformer was more eloquent; the Swiss reformer was more dialectical. The one advocated unity; the other theocracy. Luther was broader; Calvin engrafted on his reforms the Old Testament observances. The watchword of the one was Grace; that of the other was Predestination. Luther cut knots; Calvin made systems. Luther destroyed; Calvin legislated. His great principle of government was aristocratic. He wished to see both Church and State governed by a select few of able men. In all his writings we see no trace of popular sovereignty. He interested himself, like Savonarola, in political institutions, but would separate the functions of the magistracy from those of the clergy; and he clung to the notion of a theocratic government, like Jewish legislators and the popes themselves. The idea of a theocracy was the basis of Calvin's system of legislation, as it was that of Leo I. He desired that the tem-

poral power should rule in the name of God,—should be the arm by which spiritual principles should be enforced. He did not object to the spiritual domination of the popes, so far as it was in accordance with the word of God. He wished to realize the grand idea which the Middle Ages sought for, but sought for in vain,—that the Church must always remain the mother of spiritual principles; but he objected to the exercise of temporal power by churchmen, as well as to the interference of the temporal power in matters purely spiritual,—virtually the doctrine of Anselm and Becket. But, unlike Becket, Calvin would not screen clergymen accused of crime from temporal tribunals; he rather sought the humiliation of the clergy in temporal matters. He also would destroy inequalities of rank, and do away with church dignitaries, like bishops and deans and archdeacons; and he instituted twice as many laymen as clergymen in ecclesiastical assemblies. But he gave to the clergy the exclusive right to excommunicate, and to regulate the administration of the sacraments. He was himself a high-churchman in his spirit, both in reference to the divine institution of the presbyterian form of government and the ascendancy of the Church as a great power in the world.

Calvin exercised a great influence on the civil polity of Geneva, although it was established before he came to the city. He undertook to frame for the State a code

of morals. He limited the freedom of the citizens, and turned the old democratic constitution into an oligarchy. The general assembly, which met twice a year, nominated syndics, or judges; but nothing was proposed in the general assembly which had not previously been considered in the council of the Two Hundred; and nothing in the latter which had not been brought before the council of Sixty; nor even in this, which had not been approved by the lesser council. The four syndics, with their council of sixteen, had power of life and death, and the whole public business of the state was in their hands. The supreme legislation was in the council of Two Hundred; which was much influenced by ecclesiastics, or the consistory. If a man not forbidden to take the Sacrament neglected to receive it, he was condemned to banishment for a year. One was condemned to do public penance if he omitted a Sunday service. The military garrison was summoned to prayers twice a day. The judges punished severely all profanity, as blasphemy. A mason was put in prison three days for simply saying, when falling from a building, that it must be the work of the Devil. A young girl who insulted her mother was publicly punished and kept on bread-and-water; and a peasant-boy who called his mother a devil was publicly whipped. A child who struck his mother was beheaded; adultery was punished with death; a woman was publicly scourged

because she sang common songs to a psalm-tune; and another because she dressed herself, in a frolic, in man's attire. Brides were not allowed to wear wreaths in their bonnets; gamblers were set in the pillory, and card-playing and nine-pins were denounced as gambling. Heresy was punished with death; and in sixty years one hundred and fifty people were burned to death, in Geneva, for witchcraft. Legislation extended to dress and private habits; many innocent amusements were altogether suppressed; also holidays and theatrical exhibitions. Excommunication was as much dreaded as in the Mediæval church.

In regard to the worship of God, Calvin was opposed to splendid churches, and to all ritualism. He retained psalm-singing, but abolished the organ; he removed the altar, the crucifix, and muniments from the churches, and closed them during the week-days, unless the minister was present. He despised what we call art, especially artistic music; nor did he have much respect for artificial sermons, or the art of speaking. He himself preached *ex tempore*, nor is there evidence that he ever wrote a sermon.

Respecting the Eucharist, Calvin took a middle course between Luther and Zwingli, — believing neither in the actual presence of Christ in the consecrated bread, nor regarding it as a mere symbol, but a means by which divine grace is imparted; a mirror in which

the excommunication as fearful
in the Middle Ages. For admission
per, and thus to the membership
it would seem that his requirements
rather very simple, like those of
Christians, — namely, faith in God and
out any subtle and metaphysical
might expect from his inexorable
threats. But he would resort to excom-
munication, as the only weapon which
he used to bind its members together,
and which had been used from the beginning ; yet he used it
with mildness and charity, since he
could not judge the heart. And herein he
differed from the customs of the Middle Ages, and
from the Church of Rome, which excommunicated as lost, but to be
regained by penance. No one, he maintained,
deserving eternal death who was
repentant.

to the wrath of God and the power of Satan. He regarded the Sacrament of the Lord's Supper as a means to help manifold infirmities,—as a time of meditation for beholding Christ the crucified; as confirming reconciliation with God; as a visible sign of the body of Christ, recognizing his actual but spiritual presence. Luther recognized the bodily presence of Christ in the Eucharist, while he rejected transubstantiation and the idea of worshipping the consecrated wafer as the real God. This difference in the opinion of the reformers as to the Eucharist led to bitter quarrels and controversies, and divided the Protestants. Calvin pursued a middle and moderate course, and did much to harmonize the Protestant churches. He always sought peace and moderation; and his tranquillizing measures were not pleasant to the Catholics, who wished to see divisions among their enemies.

Calvin had a great dislike of ceremonies, festivals, holidays, and the like. For images he had an aversion amounting to horror. Christmas was the only festival he retained. He was even slanderously accused of wishing to abolish the Sabbath, the observance of which he inculcated with the strictness of the Puritans. He introduced congregational singing, but would not allow the ear or the eye to be distracted. The music was simple, dispensing with organs and instruments and all elaborate and artistic display. It is needless to say

The simplicity which marked
established by Calvin was not

and every presbyter was a bishop. A deacon was an officer to take care of the poor, not to preach. And it was necessary that a minister should have a double call,—both an inward call and an outward one,—or an election by the people in union with the clergy. Paul and Barnabas set forth elders, but the people indicated their approval by lifting up their hands. In the Presbyterianism which Calvin instituted he maintained that the Church is represented by the laity as well as by the clergy. He therefore gave the right of excommunication to the congregation in conjunction with the clergy. In the Lutheran Church, as in the Catholic, the right of excommunication was vested in the clergy alone. But Calvin gave to the clergy alone the right to administer the sacraments; nor would he give to the Church any other power of punishment than exclusion from the Lord's Supper, and excommunication. His organization of the Church was aristocratic, placing the power in the hands of a few men of approved wisdom and piety. He had no sympathy with democracy, either civil or religious, and he formed a close union between Church and State,—giving to the council the right to choose elders and to confirm the election of ministers. As already stated, he did not attempt to shield the clergy from the civil tribunals. The consistory, which assembled once a week, was formed of elders and preachers, and a messenger of the civil court

interference of the State in ecclesiastical affairs, even while he would separate the functions of the clergy from those of the magistrates. He allowed the State to pronounce the final sentence on dogmatic questions, and hence the power of the synod failed in Geneva. Moreover, the payment of ministers by the State rather than by the people, as in this country, was against the old Jewish custom, which Calvin so often borrowed,—for the priests among the Jews were independent of the kings. But Calvin wished to destroy caste among the clergy, and consequently spiritual tyranny. In his legislation we see an intense hostility to the Roman Catholic Church,—one of the animating principles of the Reformers; and hence the Reformers, in their hostility to Rome, went from Sylla into Charybdis. Calvin, like all churchmen, exalted naturally the theocratic idea of the old Jewish and Mediæval Church, and yet practically put the Church into the hands of laymen. In one sense he was a spiritual dictator, and like Luther a sort of Protestant pope; and yet he built up a system which was fatal to spiritual power such as had existed among the Catholic priesthood. For their sacerdotal spiritual power he would substitute a moral power, the result of personal bearing and sanctity. It is amusing to hear some people speak of Calvin as a ghostly spiritual father; but no man ever fought sacerdotalism more earnestly than he. The logical sequence

and are not unreasonable.

logical consequence. When we remember how few men are capable of interpreting Scripture for themselves, and how few are disposed to exercise this right, we can see why the formulated catechism proved useful in securing unity of belief; but when Protestant divines insisted on the acceptance of the articles of faith which they deduced from the Scriptures, they did not differ materially from the Catholic clergy in persisting on the acceptance of the authority of the Church as to matters of doctrine. Probably a church organization is impossible without a formulated creed. Such a creed has existed from the time of the Council of Nice, and is not likely ever to be abandoned by any Christian Church in any future age, although it may be modified and softened with the advance of knowledge. However, it is difficult to conceive of the unity of the Church as to faith, without a creed made obligatory on all the members of a communion to accept, and it always has been regarded as a useful and even necessary form of Christian instruction for the people. Calvin himself attached great importance to catechisms, and prepared one even for children.

He also put a great value on preaching, instead of the complicated and imposing ritual of the Catholic service; and in most Protestant churches from his day to ours preaching, or religious instruction, has occupied the most prominent part of the church service;

it is not easy to say which e:

whatever the Scriptures declared. He takes his original position neither from natural reason nor from the authority of the church, but from the word of God; and from declarations of Scripture, as he interprets them, he draws sequences and conclusions with irresistible logic. In an important sense he is one-sided, since he does not take cognizance of other truths equally important. He is perfectly fearless in pushing out to its most logical consequences whatever truth he seizes upon; and hence he appears to many gifted and learned critics to draw conclusions from accepted premises which apparently conflict with consciousness or natural reason; and hence there has ever been repugnance to many of his doctrines, because it is impossible, it is said, to believe them.

In general, Calvin does not essentially differ from the received doctrines of the Church as defended by its greatest lights in all ages. His peculiarity is not in making a digest of divinity, — although he treated all the great subjects which have been discussed from Athanasius to Aquinas. His “Institutes” may well be called an exhaustive system of theology. There is no great doctrine which he has not presented with singular clearness and logical force. Yet it is not for a general system of divinity that he is famous, but for making prominent a certain class of subjects, among which he threw the whole force of his genius.

he was a minister of theology. Augustine directed his attention to the refutation of Pelagian depravity. Luther's great doctrine of Faith, although he took the side of the papacy. It was the logical result of the doctrine of which he defended which led to the Reformation of Europe, of that extensive system of expiation which marked the Middle Ages and on which so many glared. Athanasius rendered a great service by establishing the doctrine of the Trinity, a still greater service by the opposition he made, so Luther undermined the papacy, showing eloquently, — what is the ground before, — the true ground of the controversy. To speak of Calvin, the great service he rendered arises before our minds, alth

It is not for me to discuss this great topic. I simply wish to present the subject historically,—to give Calvin's own views, and the effect of his deductions on the theology of his age; and in giving Calvin's views I must shelter myself under the wings of his best biographer, Doctor Henry of Berlin, and quote the substance of his exposition of the peculiar doctrines of the Swiss, or rather French, theologian.

According to Henry, Calvin maintained that God, in his sovereign will and for his own glory, elected one part of the human race to everlasting life, and abandoned the other part to everlasting death; that man, by the original transgression, lost the power of free-will, except to do evil; that it is only by Divine Grace that freedom to do good is recovered; but that this grace is bestowed only on the elect, and elect not in consequence of the foreknowledge of God, but by his absolute decree before the world was made.

This is the substance of those peculiar doctrines which are called Calvinism, and by many regarded as fundamental principles of theology, to be received with the same unhesitating faith as the declarations of Scripture from which those doctrines are deduced. Augustine and Aquinas accepted substantially the same doctrines, but they were not made so prominent in their systems, nor were they so elaborately worked out.

logically drawn. It has been objected that both of these eminent theologians overlooked other truths which go in parallel lines, and which would modify the doctrine,—even as Scripture asserts in one place the great fact that the will is free, and in another place that the will is shackled. The Pelagian would push out the doctrine of free-will so as to ignore the necessity of grace; and the Augustinian would push out the doctrine of the servitude of the will into downright fatalism. But these great logicians apparently shrink from the conclusions to which their logic leads them. Both Augustine and Calvin protest against fatalism, and both assert that the will is so far free that the sinner acts without constraint; and consequently the blame of his sins rests upon himself, and not upon another. The doctrines of Calvin and Augustine logically pursued would lead to the damnation of infants; yet, as a matter of fact, neither maintained that to which their logic led. It is not in human nature to believe such a thing, even if it may be dogmatically asserted.

And then, in regard to sin: no one has ever disputed the fact that sin is rampant in this world, and is deserving of punishment. But theologians of the school of Augustine and Calvin, in view of the fact, have assumed the premise—which indeed cannot be disputed—that sin is against an infinite God. Hence, that sin against an infinite God is itself infinite; and

ical reasoning, which has ver-
tical Christianity, and which
belief, to be accepted like pla-
ure, is an insult to the hun-
this conclusion, involving the
is infinite, and deserving of infi-
the mind. For relief from this
logian adduces the great fact
atonement for sin,—another
the Scripture,—and that belie-
shall be saved. This Bible doct-
forting, and accounts in a meas-
spread of Christianity. The w-
old Roman world heard the gl-
died for them, as an atonement
they were conscious, and which
despair. But another class of the
this premise, that, as Christ's
atonement for the sins of the
con-

which Calvin never lost sight of, that salvation was only for those who believed. Now inasmuch as a vast majority of the human race, including infants, have not believed, it becomes a logical conclusion that all who have not believed are lost. Logic and consciousness then come into collision, and there is no relief but in consigning these discrepancies to the realm of mystery.

I allude to these theological difficulties simply to show the tyranny to which the mind and soul are subjected whenever theological deductions are invested with the same authority as belongs to original declarations of Scripture; and which, so far from being systematized, do not even always apparently harmonize. Almost any system of belief can be logically deduced from Scripture texts. It should be the work of theologians to harmonize them and show their general spirit and meaning, rather than to draw conclusions from any particular class of subjects. Any system of deductions from texts of Scripture which are offset by texts of equal authority but apparently different meaning, is necessarily one-sided and imperfect, and therefore narrow. That is exactly the difficulty under which Calvin labored. He seems, to a large class of Christians of great ability and conscientiousness, to be narrow and one-sided, and is therefore no authority to them; not, be it understood, in reference to the great fundamental

sion from his peculiar system
the great wisdom of the English
to leave all those metaphysical
questions of comparatively little con-
sequence on unquestioned doctrines of
faith, given so great vitality to the
faith, it so broad and catholic. The
intellectual than the mass of
was led away by the imposing and
the scholastic Calvin, and came
to attach as much importance to such
questions as predestination — questions most
which he did to "the weightier matters
which are pushed by the logic of opposition
as *repugnant*," have been compelled to
accept the doctrine of mysteries, as some
things which cannot be explained or comprehended,
and the Christian duty to accept as a mystery

where distinctly affirmed, and which is against all ideas of natural justice, and arrived at by a subtle process of dialectical reasoning.

But it was natural for so great an intellectual giant as Calvin to make his startling deductions from the great truths he meditated upon with so much seriousness and earnestness. Only a very lofty nature would have revelled as he did, and as Augustine did before him and Pascal after him, in those great subjects which pertain to God and his dispensations. All his meditations and formulated doctrines radiate from the great and sublime idea of the majesty of God and the comparative insignificance of man. And here he was not so far apart from the great sages of antiquity, before salvation was revealed by Christ. "Canst thou by searching find out God?" "What is man that Thou art mindful of him?"

And here I would remark that theologians and philosophers have ever been divided into two great schools, — those who have had a tendency to exalt the dignity of man, and those who would absorb man in the greatness of the Deity. These two schools have advocated doctrines which, logically carried out to their ultimate sequences, would produce a Grecian humanitarianism on the one hand, and a sort of Bramanism on the other, — the one making man the arbiter of his own destiny, independently of divine agency, and the other

the other class have been the
the rationalizing schoolmen a
science.

Now Calvin was imbued with
Fathers of the Church and the
templative of the schoolmen of
Middle Ages, when he attached b

man was to glorify God, not to develop his own intellectual faculties, and still less to seek the pleasures and excitements of the world. Man was a sinner before an infinite God, and he could rise above the polluting influence of sin only by the special favor of God and his divinely communicated grace. Man was so great a sinner that he deserved an eternal punishment, only to be rescued as a brand plucked from the fire, as one of the elect before the world was made. The vast majority of men were left to the uncovenanted mercies of Christ, — the redeemer, not of the race, but of those who believed.

To Calvin therefore, as to the Puritans, the belief in a personal God was everything; not a compulsory belief in the general existence of a deity who, united with Nature, reveals himself to our consciousness; not the God of the pantheist, visible in all the wonders of Nature; not the God of the rationalist, who retires from the universe which he has made, leaving it to the operation of certain unchanging and universal laws: but the God whom Abraham and Moses and the prophets saw and recognized, and who by his special providence rules the destinies of men. The most intellectual of the reformers abhorred the deification of the reason, and clung to that exalted supernaturalism which was the life and hope of blessed saints and martyrs in bygone ages, and which in "their contests with mail-clad infidelity was

in attempting to reconcile two apparently opposing facts,—like our pious fathers at their New England firesides, who were compelled to shelter themselves behind mystery.

The tendency of Calvin's system, it is maintained by many, is to ascribe to God attributes which according to natural justice would be injustice and cruelty, such as no father would exercise on his own children, however guilty. Even good men will not accept in their hearts doctrines which tend to make God less compassionate than man. There are not two kinds of justice. The intellect is appalled when it is affirmed that one man *justly* suffers the penalty of another man's sin,—although the world is full of instances of men suffering from the carelessness or wickedness of others, as in a wicked war or an unnecessary railway disaster. The Scripture law of retribution, as brought out in the Bible and sustained by consciousness, is the penalty a man pays for personal and voluntary transgression. Nor will consciousness accept the doctrine that the sin of a mortal—especially under strong temptation and with all the bias of a sinful nature—is infinite. Nothing which a created mortal can do is infinite; it is only finite: the infinite belongs to God alone. Hence an infinite penalty for a finite sin conflicts with consciousness and is nowhere asserted in the Bible, which is transcendently more merciful

have two sides, and represent different meanings, while learning and science are still worthy. It would seem to be for theological schools to make declarations, and present with apparently conflicting a perfect and consistent system considered, from any one class this wicked and perplexingology should be the most clear it involves inquiries on the long interest a thoughtful mind.

But whatever defects the system Calvin elaborated with such have, there is no question as to thinking of the sixteenth century. The schools of France and England and America were

is still one of the great authorities of the church universal. John Knox sought his counsel and was influenced by his advice in the great reform he made in Scotland. In France the words Calvinist and Huguenot are synonymous. Cranmer, too, listened to his counsels, and had great respect for his learning and sanctity. Among the Puritans he has reigned like an oracle. Oliver Cromwell embraced his doctrines, as also did Sir Matthew Hale. Ridicule or abuse of Calvin is as absurd as the ridicule or abuse with which Protestants so long assailed Hildebrand or Innocent III. No one abuses Pascal or Augustine, and yet the theological views of all these are substantially the same.

In one respect I think that Calvin has received more credit than he deserves. Some have maintained that he was a sort of father of republicanism and democratic liberty. In truth he had no popular sympathies, and leaned towards an aristocracy which was little short of an oligarchy. He had no hand in establishing the political system of Geneva; it was established before he went there. He was not even one of those thinkers who sympathized with true liberty of conscience. He persecuted heretics like a mediæval Catholic divine. He would have burned a Galileo as he caused the death of Servetus, which need not have happened but for him. Calvin could have saved Servetus if he had

had a remarkable analytical
of generalization. He was a

“advanced thought,” but his annotations will live when those of Ewald shall be forgotten; they still hold their place in the libraries of biblical critics. For his age he was a transcendent critic; his various writings fill five folio volumes. He was not so voluminous a writer as Thomas Aquinas, but less diffuse; his style is lucid, like that of Voltaire.

Considering the weakness of his body Calvin’s labors were prodigious. There was never a more industrious man, finding time for everything, — for an amazing correspondence, for pastoral labors, for treatises and essays, for commentaries and official duties. No man ever accomplished more in the same space of time. He preached daily every alternate week; he attended meetings of the Consistory and of the Court of Morals; he interested himself in the great affairs of his age; he wrote letters to all parts of Christendom.

Reigning as a religious dictator, and with more influence than any man of his age, next to Luther, Calvin was content to remain poor, and was disdainful of money and all praises and rewards. This was not an affectation, not the desire to imitate the great saints of Christian antiquity to whom poverty was a cardinal virtue; but real indifference, looking upon money as *impedimenta*, as camp equipage is to successful generals. He was not conscious of being poor with his small salary of fifty dollars a year, feeling that he had inexhaustible

phrases and tricks of rhetoric; he appealed to reason rather than the passions, to the conscience rather than the imagination.

Though mild, Calvin was also intolerant. Castillo, once his friend, assailed his doctrine of Decrees, and was obliged to quit Geneva, and was so persecuted that he died of actual starvation; Perrin, captain-general of the republic, danced at a wedding, and was thrown into prison; Bolsec, an eminent physician, opposed the doctrine of Predestination, and was sentenced to perpetual imprisonment; Gruet spoke lightly of the ordinances of religion, and was beheaded; Servetus was a moral and learned and honest man, but could not escape the flames. Had he been willing to say, as the flames consumed his body, "Jesus, thou eternal Son of God, have mercy on me!" instead of, "Jesus, thou son of the eternal God!" he might have been spared. Calvin was as severe on those who refused to accept his logical deductions from acknowledged truths as he was on those who denied the fundamental truths themselves. But toleration was rare in his age, and he was not beyond it. He was not even beyond the ideas of the Middle Ages in some important points, such as those which pertained to divine justice,—the wrath rather than the love of God. He lived too near the Middle Ages to be emancipated from the ideas which enslaved such a man as Thomas Aquinas. He had

a type of the early evangelist,

ing to the winds the dust of all mortal grandeur. With all his faults, which were on the surface, he was the accepted idol and oracle of a great party, and stamped his genius on his own and succeeding ages. Whatever the Presbyterians have done for civilization, he comes in for a share of the honor. Whatever foundations the Puritans laid for national greatness in this country, it must be confessed that they caught inspiration from his decrees. Such a great master of exegetical learning and theological inquiry and legislative wisdom will be forever held in reverence by lofty characters, although he may be no favorite with the mass of mankind. If many great men and good men have failed to comprehend either his character or his system, how can a pleasure-loving and material generation, seeking to combine the glories of this world with the promises of the next, see much in him to admire, except as a great intellectual dialectician and system-maker in an age with which it has no sympathy? How can it appreciate his deep spiritual life, his profound communion with God, his burning zeal for the defence of Christian doctrine, his sublime self-sacrifice, his holy resignation, his entire consecration to a great cause? Nobody can do justice to Calvin who does not know the history of his times, the circumstances which surrounded him, and the enemies he was required to fight. No one can comprehend his character or mission who does not feel it to be supremely

and admiring Beza, as the rays of the setting-sun gilded with their glory his humble chamber of toil and spiritual exaltation.

No man who knows anything will ever sneer at Calvin. He is not to be measured by common standards. He was universally regarded as the greatest light of the theological world. When we remember his transcendent abilities, his matchless labors, his unrivalled influence, his unblemished morality, his lofty piety, and soaring soul, all flippant criticism is contemptible and mean. He ranks with immortal benefactors, and needs least of all any apologies for his defects. A man who stamped his opinions on his own age and succeeding ages can be regarded only as a very extraordinary genius. A frivolous and pleasure-seeking generation may not be attracted by such an impersonation of cold intellect, and may rear no costly monument to his memory; but his work remains as the leader of the loftiest class of Christian enthusiasts that the modern world has known, and the founder of a theological system which still numbers, in spite of all the changes of human thought, some of the greatest thinkers and ablest expounders of Christian doctrine in both Europe and America. To have been the spiritual father of the Puritans for three hundred years is itself a great evidence of moral and intellectual excellence, and will link his name with some of the greatest movements that

of Christian theology ; so
as the great doctor of the .

HENRY OF NAVARRE.

THE HUGUENOTS.

IN this lecture I shall confine myself principally to the connection of Henry IV. with that memorable movement which came near making France a Protestant country. He is identified with the Huguenots, and it is the struggles of the Huguenots which I wish chiefly to present. I know he was also a great king, the first of the Bourbon dynasty, whose heroism in war was equalled only by his enlightened zeal in the civilization of France,—a king who more deeply impressed himself upon the affections of the nation than any monarch since Saint Louis, and who, had he lived to execute his schemes, would have raised France to the highest pitch of glory. Nor do I forget, that, although he fought for a great cause, and reigned with great wisdom and ability, and thus rendered important services to his country, he was a man of great defects of character, stained with those peculiar vices which disgraced most of the Bourbon kings, especially Louis XIV. and

siasm and patience and boldness and originality to which our own times furnish no parallel. And united with this fresh and original agitation of great ideas was a heroism in action which no age of the world has equalled. Men risked their fortunes and their lives in defence of those principles which have made the enjoyment of them in our times the greatest blessing we possess. It was a new spirit that had arisen in our world to break the fetters which centuries of fraud and superstition and injustice had forged, — a spirit scornful of old authorities, yet not sceptical, with disgust of the past and hope for the future, penetrating even the hamlets of the poor, and kindling the enthusiasm of princes and nobles, producing learned men in every country of Europe, whose original investigations should put to the blush the commentators and compilers of this age of religious mediocrity and disguised infidelity. Such intellectual giants in the field of religious inquiry had not appeared since the Fathers of the Church combated the paganism of the Roman world, and will not probably appear again until the cycle of changes is completed in the domain of theological thought, and men are forced to meet the enemies of divine revelation marshalled in such overwhelming array that there will be a necessity for reformers, called out by a special Providence to fight battles, — as I regard Luther and Calvin and Knox. The great difference between the

of audacious youth, still clinging
the nineteenth reminds us of
age, believing in nothing but
and art, and shaking off the

ages to the liberty and comforts of highly civilized life. In the midst of religious enthusiasm we see tumults, insurrections, terrible animosities, and cruel intolerance. War was associated with inhuman atrocities, and the acceptance of the reformed faith was followed by bitter and heartless persecution. The feudal system had received a shock from standing armies and the invention of gunpowder and the central authority of kings, but it was not demolished. The nobles still continued to enjoy their social and political distinctions, the peasantry were ground down by unequal laws, and the nobles were as arrogant and quarrelsome as the people were oppressed by unjust distinctions. They were still followed by their armed retainers, and had almost unlimited jurisdiction in their respective governments. Even the higher clergy gloried in feudal inequalities, and were selected from the noble classes. The people were not powerful enough to make combinations and extort their rights, unless they followed the standards of military chieftains, arrayed perhaps against the crown and against the parliaments. We see no popular, independent political movements; even the people, like all classes above them, were firm and enthusiastic in their religious convictions.

The commanding intellect at that time in Europe was John Calvin (a Frenchman, but a citizen of Geneva), whom we have already seen to be a man of

unct and logical con-
civil liberty itself. It
was nothing democratic

the Huguenots; he only aimed at the recognition of religious rights. The Huguenots never rallied around popular leaders, but rather under the standards of princes and nobles fighting for the right of worshipping God according to the dictation or ideas of Calvin. They would preserve their schools, their churches, their consistories, and their synods; they would be unmolested in their religious worship.

Now, at the time when Henry IV. was born, in the year 1553, when Henry II. was King of France and Edward VI. was King of England, the ideas of the Reformation, and especially the doctrines of Calvin, had taken a deep and wide hold of the French people. The Calvinists, as they were called, were a powerful party; in some parts of France they were in a majority. More than a third of the whole population had enthusiastically accepted the reformed doctrines. They were in a fair way toward triumph; they had great leaders among the highest of the nobility. But they were bitterly hated by the king and the princes of the house of Valois, and especially by the Duke of Guise and the Cardinal of Lorraine,—the most powerful families in France,—because they meditated to overturn, not the throne, but the old established religion. The Pope instigated the most violent proceedings; so did the King of Spain. It was resolved to suppress the hated doctrines. The enemies of the Calvinists resorted

manners and graceful accomplishments,—like Mary of Scotland, but without her levities. Under her influence persecution assumed a form which was truly diabolical. The Huguenots, although supported by the King of Navarre, the Prince of Condé, Coligny (Admiral of France), his brother the Seigneur d'Andelot, the Count of Montgomery, the Duke of Bouillon, the Duke of Soubise, all of whom were nobles of high rank, were in danger of being absolutely crushed, and were on the brink of despair. What if a third part of the people belonged to their ranks, when the whole power of the crown and a great majority of the nobles were against them; and these supported by the Pope and clergy, and stimulated to ferocity by the Jesuits, then becoming formidable?

At last the Huguenots resolved to organize and arm in their own defence, for there is a time when submission ceases to be a virtue. If ever a people had cause for resistance it was this persecuted people. They did not rise up against their persecutors with the hope of overturning the throne, or producing a change of dynasties, or gaining constitutional liberty, or becoming a political power hostile to the crown, like the Puritans under Cromwell or Hampden, but simply to preserve what to them was more precious than life. All that they demanded was a toleration of their religion; and as their religion was dearer to them than life, they were

The mother of the young prince, destined afterwards to be so famous, was one of the most celebrated women of history, — Jeanne D'Albret, niece of Francis I.; a woman who was equally extolled by men of letters and Calvinistic divines. She was as beautiful as she was good; at her castle in Pau, the capital of her hereditary kingdom of Navarre, she diffused a magnificent hospitality, especially to scholars and the lights of the reformed doctrines. Her kingdom was small, and was politically unimportant; but she was a sovereign princess nevertheless. The management of the young prince, her son, was most admirable, but unusual. He was delicate and sickly as an infant, and reared with difficulty; but, though a prince, he was fed on the simplest food, and exposed to hardships like the sons of peasants; he was allowed to run bareheaded and barefooted, exposed to heat and rain, in order to strengthen his constitution. Amid the hills at the base of the Pyrenees, in the company of peasants' children, he thus acquired simple and natural manners, and accustomed himself to fatigues and dangers. He was educated in the reformed doctrines, but was more distinguished as a boy for his chivalric graces, physical beauty, and manly sports than for seriousness of character or a religious life. He grew up a Protestant, from education rather than conviction. At twelve, in the year 1565, he was intrusted by his mother, the Queen of

Navarre, to the care of his uncle, the Prince of Condé, and, on his death, to Admiral Coligny, the acknowledged leader of the Protestants. He thus witnessed many bloody battles before he was old enough to be intrusted with command. At eighteen he was affianced to Marguerite de Valois, sister of Charles IX., in spite of differences of religion.

It was amid the nuptial festivities of the young King of Navarre, — his mother had died the year before, — when all the prominent leaders of the Protestants were enticed to Paris, that preparations were made for the blackest crime in the annals of civilized nations, — even the treacherous and hideous massacre of St. Bartholomew, perpetrated by Charles IX., who was incited to it by his mother, the ever-infamous Catherine de Medicis, and the Duke of Guise.

The Protestants, under the Prince of Condé and Admiral Coligny, had fought so bravely and so successfully in defence of their cause that all hope of subduing them in the field was given up. The bloody battles of Montcontour, of St. Denis, and of Jarnac had proved how stubbornly the Huguenots would fight; while their possession of such strong fortresses as Montauban and La Rochelle, deemed impregnable, showed that they could not easily be subdued. Although the Prince of Condé had been slain at the battle of Jarnac, this great misfortune to the Protestants was more

than balanced by the assassination of the great Duke of Guise, the ablest general and leader of the Catholics. So when all hope had vanished of exterminating the Huguenots in open warfare, a deceitful peace was made; and their leaders were decoyed to Paris, in order to accomplish, in one foul sweep, by wholesale murder, the diabolical design.

The Huguenot leaders were completely deceived. Old Admiral Coligny, with his deeper insight, hesitated to put himself into the power of a bigoted and persecuting monarch; but Charles IX. pledged his word for his safety, and in an age when chivalry was not extinguished, his promise was accepted. Who could believe that his word of honor would be broken, or that he, a king, could commit such an outrageous and unprecedented crime? But what oath, what promise, what law can bind a man who is a slave of religious bigotry, when his church requires a bloody and a cruel act? The end seemed to justify any means. I would not fix the stain of that infamous crime exclusively on the Jesuits, or on the Pope, or on the councillors of the King, or on his mother. I will not say that it was even exclusively a Church movement: it may have been equally an apparent State necessity. A Protestant prince might mount the throne of France, and with him, perhaps, the ascendancy of Protestantism, or at least its protection. Such a catastrophe, as it seemed to the

ageous as Du Gueslin, at

royal promises. But there was one person whom no dangers appalled, and whose icy soul could be moved by no compassion and no voice of conscience. At midnight, Catherine entered the chamber of her irresolute son, in the Louvre, on whose brow horror was already stamped, and whose frame quivered with troubled chills. Coloring the crime with the usual sophistries of all religious and political persecution, that the end justifies the means, and stigmatizing him as a coward, she at last extorted from his quivering lips the fatal order; and immediately the tocsin of death sounded from the great bell of the church of St. Germain de Auxerrois. At once the slaughter commenced in every corner of Paris, so well were the horrid measures concerted. Screams of despair were mingled with shouts of vengeance; the cries of the murdered were added to the imprecations of the murderers; the streets flowed with blood, the dead rained from the windows, the Seine became purple. Men, women, and children were seen flying in every direction, pursued by soldiers, who were told that an insurrection of Protestants had broken out. No sex or age or dignity was spared, no retreat afforded a shelter, not even the churches of the Catholics. Neither Alaric nor Attila ever inflicted such barbarities. No besieged city taken by assault ever saw such wanton butcheries, except possibly Jerusalem when taken by Titus or Godfrey, or

country. The slaughter was begun in treachery and was continued in the most heartless cruelty. When the news of it reached Rome, the Holy Father the Pope caused a medal to be struck in commemoration of the event, illuminated his capital, ordained general rejoicings, as if for some signal victory over the Turks; and, assisted by his cardinals and clergy, marched in glad procession to St. Peter's Church, and offered up a solemn *Te Deum* for this vile and treacherous slaughter of sixty thousand Protestants.

In former lectures I have passed rapidly and imperfectly over this awful crime, not wishing to stimulate passions which should be buried, and thinking it was more the fault of the age than of Catholic bigots; but I now present it in its naked deformity, to be true to history, and to show how cruel is religious intolerance, confirmed by the history of other inhumanities in the Catholic Church,—by the persecution of Dominican monks, by the slaughter of the Albigenses, by inquisitions, gunpowder plots, the cruelties of Alva, and that trail of blood which has marked the fairest portions of Europe by the hostilities of the Church of Rome in its struggles to suppress Protestant opinions. I mention it to recall the fact that Protestantism has never been stained by such a crime. I mention it to invoke gratitude that such a misguided zeal has passed away and is never likely to return. Catholic

historians do not pretend to deny the horrid facts, but ascribe the massacre to political animosities rather than religious, — a lame and impotent defence of their persecuting Church in the sixteenth century.

But this atrocity had such a demoniacal blackness and perfidy about it that it filled the whole Protestant world with grief and indignation, especially England, and had only the effect of binding together the Huguenots in a solid phalanx of warriors, resolved on making no peace with their perfidious enemies until their religious liberties were guaranteed. Though decimated, they were not destroyed; for the provincial governors and rural magistrates generally refused to execute the royal decrees, — their hearts were moved with pity. The slaughter was not universal, and Henry himself had escaped, his life being spared on condition of his becoming a Catholic, which as a matter of form he did.

Nevertheless, all Protestant eyes were now directed to him as their leader, since Coligny had perished by daggers, and Condé on the field of battle. Henry was still a young man, only twenty years of age, but able, intrepid, and wise. He and his cousin, the younger Condé, were still held as hostages, while the Huguenots again rallied and retired to their strong fortress of La Rochelle. Their last hopes centred in this fortress, defended by only fifteen thousand men, under the brave La Noue, while the royal army embraced

the power of the French monarchy, surrounded by the
 friends of liberty and religion. But when they
 were compelled to raise the siege, 1573, with a
 loss of fifty thousand men, I repeat the successful
 defence of this fortress at this crisis as the most
 important event in the whole Huguenot career, since
 it enabled the Huguenots to make a stand against the
 whole power of the monarchs. It did not give them
 victory, but gave them a place to rally; and it pro-
 claimed the fact that the contest would not end until
 the Protestants had achieved their liberties or were
 utterly annihilated.

Soon after this successful and glorious defence of La
 Rochelle, Charles IX. died, at the age of forty-four, in
 awful agonies, — the victim of remorse and partial in-
 sanity, in the hours of which the horrors of St. Barthol-
 omew were ever present to his excited imagination, and
 when he beheld wild faces of demons and murdered
 Huguenots rejoicing in his torments, and heard strange
 voices consigning his name to infamy and his body
 to those never-ending physical torments in which both
 Catholics and Protestants equally believed. His mother
 however remained cold, inflexible, and unmoved, — for
 when a woman falls under the grip of the Devil, then no
 man can equal her in shamelessness and reckless sin.

Charles IX. was succeeded, in 1574, by his brother
 the King of Poland, under the name of Henry III.,

at Tours. He was no

and animosity of the Catholics. All the forces which the Government could raise were now arrayed against him and his party. The Pope, Sixtus V., in a papal bull, took away his hereditary rights; but fortune favored him. The Duke of Guise, who aspired to the throne, was himself assassinated, as his father had been; and now, by the orders of his jealous sovereign, his brother, the Cardinal of Guise, nephew of the Cardinal of Lorraine,—a man who held three archbishoprics, six bishoprics, and five abbeys, and these the richest in the kingdom,—shared the same fate. And Providence removed also, soon after, the most guilty and wicked of all the perpetrators of the massacre of St. Bartholomew, even Catherine de Medicis,—who would be regarded as a female monster, an incarnate fiend, a Messalina, or a Fredegunda, had she not been beautiful, with pleasing and gracious manners, a great fondness for society and music and poetry and art,—the most accomplished woman of her day, and so attractive as to be compared by the poets of her court to Aurora and Venus. Her life only shows how much heartlessness, cruelty, malignity, envy, and selfishness may be concealed by the mask of beauty and agreeable manners and artistic accomplishments.

The bloody battle of Coutras enabled Henry of Navarre to take a stand against the Catholics; but after the death of Henry III. by assassination, in 1589, his

"keep my plume in sight: you will always see it in the face of glory and honor." So saying, he put on his helmet, adorned with three white plumes, gave the order of battle, and, sword in hand, led the charge against the enemy. For some time the issue of the conflict was doubtful, for the forces were about equal; but at length victory inclined to the Protestants, who broke forth in shouts as Henry, covered with dust and blood, appeared at the head of the pursuing squadrons.

"Now, God be praised, the day is ours! Mayenne hath turned his rein,

D'Aumale hath cried for quarter, the Flemish count is slain.
Their ranks are breaking like thin clouds before a Biscay gale;
The field is heaped with bleeding steeds, and flags, and cloven mail;

And then we thought on vengeance, and all along our van
'Remember St. Bartholomew' was passed from man to man.
But out spake gentle Henry then: 'No Frenchman is my foe;
Down, down with every foreigner, but let your brethren go!
Oh, was there ever such a knight, in friendship or in war,
As our sovereign lord, King Henry, the soldier of Navarre?'

The battle of Ivry, in which the forces of the League met with a complete overthrow, was followed by the siege of Paris, its memorable defence, and the arrival of the Duke of Parma, which compelled Henry to retire. Though he had gained a great victory, and received great accessions, he had to struggle four years longer, so determined were the Catholics; and he might have

had to fight a still longer time for his throne had he not taken the extraordinary resolution of abjuring his religion and cause. His final success was not doubtful, even as a Protestant king, since his title was undisputed; but he wearied of war. The peace of the kingdom and the security of the throne seemed to him a greater good than the triumph of the Huguenots. In that age great power was given to princes; he doubtless could have reigned as a Protestant prince had he persevered for a few years longer, and Protestantism would have been the established religion of France, as it was of England under Elizabeth. Henry as a Protestant king would have had no more enemies, or difficulties, or embarrassments than had the Virgin Queen, who on her accession found only one bishop willing to crown her. He had all the prestige of a conqueror, and was personally beloved, besides being a man of ability. His prime minister, Sully, was as able a man as Burleigh, and as good a Protestant; and the nation was enthusiastic. The Huguenots had deeper convictions, and were more logical in their creed, than the English Episcopalians. Leagued with England and Holland and Germany, France could have defied other Catholic powers, — could have been more powerful politically. Protestantism would have had the ascendancy in Europe.

But it was not to be. To the mind of the King

he had nothing before him but protracted war, unless he became a Catholic; and as all the Huguenots ever struggled for was religious toleration, he would, as king, grant this toleration, and satisfy all parties. He either had no deep religious convictions, like Coligny and Dandelot, or he preferred an undisturbed crown to the ascendancy of the religion for which he had so bravely fought. What matter, the tempter said, whether he reigned as a Catholic or Protestant monarch, so long as religious liberty was given to his subjects? Could he have reigned forever, could he have been assured of the toleration of his successors, this plea might have had some force; but it was the dictate of expediency, and no man can predict its ultimate results. He was not a religious man, although he was the leader of the Protestant party. He was far from being even moral in his social relations; still less had he the austerity of manners and habits that then characterized the Huguenots, for they were Calvinists and Presbyterians. He was gallant, brave, generous, magnanimous, and patriotic,—the model of a gentleman, the impersonation of chivalry, the charm of his friends, the idol of his army, the glory of his country; but there his virtues stopped. He was more of a statesman than the leader of a party. He wanted to see France united and happy and prosperous more than he wanted to see the ascendancy of the Huguenots. He was now

not the King of Navarre, — a small country, scarcely thirty miles long, — but the King of France, ruling, as he aspired, from the Pyrenees to the Rhine. So it is not strange that he was governed by the principles of expediency, as most monarchs are. He wished to aggrandize his monarchy; that aim was dearer to him than the reformed faith. Coligny would have fought to the bitter end to secure the triumph of the Protestant cause; but Henry was not so lofty a man as the Admiral, — he had not his religious convictions, or stern virtues, or incorruptible life. He was a gallant monarch, an able general, a far-reaching statesman, yet fond of pleasure and of the glories of a court.

So Henry made up his mind to abjure his faith. On Sunday the 25th of July, 1593, clad not in helmet and cuirass and burnished steel, as at Ivry, but in a doublet of white satin, and a velvet coat ornamented with jewels and orders and golden fleurs de lis, and followed by cardinals and bishops and nobles, he entered the venerable Abbey of St. Denis, where reposed the ashes of all his predecessors, from Dagobert to Henry III., and was received into the bosom of the Catholic Church. A solemn *Te Deum* was then chanted by unnumbered priests; and the lofty pillars, the marble altars, the storied effigies, the purple windows, and the vaulted roof of that mediæval monument re-echoed to the music of those glorious anthems which were sung ages before

the most sainted of the kings of France was buried in the crypt. The partisans of the Catholic faith rejoiced that a heretic had returned to the fold of true believers; while the saddened, disappointed, humiliated members of the reformed religion felt, and confessed with shame, that their lauded protector had committed the most lamentable act of apostasy since the Emperor Julian abjured Christianity. It is true they palliated his conduct and remained faithful to his standard; but they felt he had committed a great blunder, if it were not a great crime. They knew that their cause was lost, — lost by him who had been their leader. Truly could they say, "Put not your trust in princes." To the irreligious, but worldly-wise, Henry had made a grand stroke of policy; had gained a kingdom well worth a Mass, had settled the disorders of forty years, had united both Catholics and Protestants in fealty to his crown, and was left at leisure to develop the resources of the nation, and lay a foundation for its future greatness.

I cannot here enumerate Henry IV.'s services to France, after the long civil war had closed; they were very great, and endeared him to the nation. He proved himself a wise and beneficent ruler; with the aid of the transcendent abilities of Sully, whose counsels he respected, he reduced taxation, founded schools and libraries, built hospitals, dug canals, repaired fortifi-

cations, restrained military license, punished turbulence and crime, introduced useful manufactures, encouraged industry, patronized learning, and sought to perpetuate peace. He aimed to be the father of his people, and he was the protector of the poor. His memorable saying is still dear to the hearts of Frenchmen: "I hope so to manage my kingdom that the poorest subject of it may eat meat every day in the week, and moreover be enabled to put a fowl into the pot every Sunday." I should like to point out his great acts and his enlightened policy, especially his effort to create a balance of power in Europe. The settlement of the finances and the establishment of various industries were his most beneficial acts. The taxes were reduced one half, and at his death he had fifty millions in the treasury,—a great sum in those days,—having paid off a debt of three hundred millions in eight years.

These and other public services showed his humane nature and his enlightened mind, until, after a glorious reign of twenty-two years, he was cut off, in the prime of his life and in the midst of his usefulness, by the assassin's dagger, May, 1610, in the fifty-eighth year of his age,—the greatest of all the French kings,—leaving five children by his second wife, Marie de Medicis, four of whom became kings or queens.

But to consider particularly Henry's connection with the Huguenots. If he deserted their ranks, he did not

forget them. He gave them religious toleration, — all they originally claimed. In 1598 was signed the memorable edict of Nantes, by which the Protestants preserved their churches, their schools, their consistories, and their synods; and they retained as a guarantee several important cities and fortresses, — a sort of *imperium in imperio*. They were made eligible to all offices. They were not subjected to any grievous test-act. They enjoyed social and political equality, as well as unrestricted religious liberty, except in certain cities. They gained more than the Puritans did in the reign of Charles II. They were not excluded from universities, nor degraded in their social rank, nor annoyed by unjust burial laws. The two religions were placed equally under the protection of the government. By this edict the Huguenots gained all that they had struggled for.

Still, the abjuration of Henry IV. was a great calamity to them. They lost their prestige; they were in a minority; they could count no longer on the leadership of princes. They were deprived gradually of the countenance of powerful nobles and all the potent influences of fashion; and when a reaction against Calvinism took place in the seventeenth century, the Huguenots had dwindled to a comparatively humble body of unimportant people. They lost heart and men of rank to defend them when the persecution of Richelieu overtook

Henry IV., when he gave toleration to the Huguenots, never dreamed that his successors would undo his work. Had he foreseen that concession to the unchanged and unchangeable enemies of human freedom would have ended as it did, I believe his noble heart would have revolted from any peace until he could have reigned as a Protestant king. Oh, had he struggled a little longer for his crown, how different might have been the subsequent history of France, and even Europe itself! How much greater would have been his own fame! Even had he died as the defender of Protestant liberties, a greater glory than that of Gustavus would have been his forever. The immediate results of his abjuration were doubtless beneficial to himself, to the Huguenots, and to his country. Expediency gives great rewards; but expediency cannot control future events,—it is short-sighted, and only for the time successful. Ask you for the ultimate results of the abjuration of Henry IV., I point to the demolition of La Rochelle, under Richelieu, and the systematic humiliation of the Huguenots; I point to the revocation of the Edict of Nantes, by Louis XIV., and the bitter and cruel and wholesale persecution which followed; I point to the atrocities of the dragonnades and the exile of the Huguenots to England and America and Holland; I point to the extinction of civil and religious liberty in France,—to the restoration of the

THE NEW PHILOSOPHY.

A. D. 1561-1626.

XXXV.

FRANCIS BACON.

THE NEW PHILOSOPHY.

IT is not easy to present the life and labors of
“The wisest, brightest, meanest of mankind.”

So Pope sums up the character of the great Lord Bacon as he is generally but improperly called; and this verdict, in the main, has been confirmed by Lords Macaulay and Campbell, who seem to delight in keeping him in that niche of the temple of fame where the poet has placed him,—contemptible as a man, but venerable as the philosopher, radiant with all the wisdom of his age and of all preceding ages, the miner and sapper of ancient falsehoods, the pioneer of all true knowledge, the author of that inductive and experimental philosophy on which is based the glory of our age. Macaulay especially, in that long and brilliant article which appeared in the “Edinburgh Review” in 1837, has represented him as a remarkably worldly man, cold, calculating, selfish; a sycophant and a flat-

terer, bent on self-exaltation; greedy, careless, false; climbing to power by base subserviency; betraying friends and courting enemies; with no animosities he does not suppress from policy, and with no affections which he openly manifests when it does not suit his interests: so that we read with shame of his extraordinary shamelessness, from the time he first felt the cravings of a vulgar ambition to the consummation of a disgraceful crime; from the base desertion of his greatest benefactor to the public selling of justice as Lord High Chancellor of the realm; resorting to all the arts of a courtier to win the favor of his sovereign and of his minions and favorites; reckless as to honest debts; torturing on the rack an honest parson for a sermon he never preached; and, when obliged to confess his corruption, meanly supplicating mercy from the nation he had outraged, and favors from the monarch whose cause he had betrayed. The defects and delinquencies of this great man are bluntly and harshly put by Macaulay, without any attempt to soften or palliate them; as if he would consign his name and memory, not "to men's charitable speeches, to foreign nations, and to the next ages," but to an infamy as lasting and deep as that of Scroggs and of Jeffreys, or any of those hideous tyrants and monsters that disgraced the reigns of the Stuart kings.

And yet while the man is made to appear in such

hideous colors, his philosophy is exalted to the highest pinnacle of praise, as the greatest boon which any philosopher ever rendered to the world, and the chief cause of all subsequent progress in scientific discovery. And thus in brilliant rhetoric we have a painting of a man whose life was in striking contrast with his teachings, — a Judas Iscariot, uttering divine philosophy; a Seneca, accumulating millions as the tool of Nero; a fallen angel, pointing with rapture to the realms of eternal light. We have the most startling contradiction in all history, — glory in debasement, and debasement in glory; the most selfish and worldly man in England, the “meanest of mankind,” conferring on the race one of the greatest blessings it ever received, — not accidentally, not in repentance and shame, but in exalted and persistent labors, amid public cares and physical infirmities, from youth to advanced old age; living in the highest regions of thought, studious and patient all his days, even when neglected and unrewarded for the transcendent services he rendered, not as a philosopher merely, but as a man of affairs and as a responsible officer of the Crown. Has there ever been, before or since, such an anomaly in human history, — so infamous in action, so glorious in thought; such a contradiction between life and teachings, — so that many are found to utter indignant protests against such a representation of humanity, justly feeling that such

a portrait, however much it may be admired for its brilliant colors, and however difficult to be proved false, is nevertheless an insult to the human understanding? The heart of the world will not accept the strange and singular belief that so bad a man could confer so great a boon, especially when he seemed bent on bestowing it during his whole life, amid the most harassing duties. If it accepts the boon, it will strive to do justice to the benefactor, as he himself appealed to future ages; and if it cannot deny the charges which have been arrayed against him, — especially if it cannot exculpate him, — it will soar beyond technical proofs to take into consideration the circumstances of the times, the temptations of a corrupt age, and the splendid traits which can with equal authority be adduced to set off against the mistakes and faults which proceeded from inadvertence and weakness rather than a debased moral sense, — even as the defects and weaknesses of Cicero are lost sight of in the acknowledged virtues of his ordinary life, and the honest and noble services he rendered to his country and mankind.

Bacon was a favored man; he belonged to the upper ranks of society. His father, Sir Nicholas Bacon, was a great lawyer, and reached the highest dignities, being Lord Keeper of the Great Seal. His mother's sister was the wife of William Cecil, the great Lord Burleigh,

the most able and influential of Queen Elizabeth's ministers. Francis Bacon was the youngest son of the Lord Keeper, and was born in London, Jan. 22, 1561. He had a sickly and feeble constitution, but intellectually was a youthful prodigy; and at nine years of age, by his gravity and knowledge, attracted the admiring attention of the Queen, who called him her young Lord Keeper. At the age of ten we find him stealing away from his companions to discover the cause of a singular echo in the brick conduit near his father's house in the Strand. At twelve he entered the University of Cambridge; at fifteen he quitted it, already disgusted with its pedantries and sophistries; at sixteen he rebelled against the authority of Aristotle, and took up his residence at Gray's Inn; the same year, 1576, he was sent to Paris in the suite of Sir Amias Paulet, ambassador to the court of France, and delighted the salons of the capital by his wit and profound inquiries; at nineteen he returned to England, having won golden opinions from the doctors of the French Sanhedrim, who saw in him a second Daniel; and in 1582 he was admitted as a barrister of Gray's Inn, and the following year composed an essay on the Instauration of Philosophy. Thus, at an age when young men now leave the university, he had attacked the existing systems of science and philosophy, proudly taking in all science and knowledge for his realm.

this powerful patron, who urged the Queen to give Bacon a high office, she is said to have replied: "He has indeed great wit and much learning, but in law, my lord, he is not deeply read,"—an opinion perhaps put into her head by his rival Coke, who did indeed know law but scarcely anything else, or by that class of old-fashioned functionaries who could not conceive how a man could master more than one thing. We should however remember that Bacon had not reached the age when great offices were usually conferred in the professions, and that his efforts to be made solicitor-general at the age of thirty-one, and even earlier, would now seem unreasonable and importunate, whatever might be his attainments. Disappointed in not receiving high office, he meditated a retreat to Cambridge; but his friend Essex gave him a villa in Twickenham, which he soon mortgaged, for he was in debt all his life, although in receipt of sums which would have supported him in comfort and dignity were it not for his habits of extravagance,—the greatest flaw in his character, and which was the indirect cause of his disgrace and fall. He was even arrested for debt when he enjoyed a lucrative practice at the courts. But nothing prevented him from pursuing his literary and scientific studies, amid great distractions,—for he was both a leader at the bar and a leader of the House of Commons; and if he did not receive the rewards to which

(1604), in the fifth year after his marriage with daughter, "a handsome Besides this office, which he about this time had Chamber, which added . time from all sources a large sum for those times, man. Six years afterwards, and in the year 1616 and the following year his position in the realm, next Canterbury, as Lord Chamberlain, and soon after was created his title, but the world called him Bacon. In 1620, two years after the death of Walter Raleigh, which was the zenith of his fortunes and

philosophy and science both more true and more active."

Then began to gather the storms which were to wreck his fortunes. The nation now was clamorous for reform; and Coke, the enemy of Bacon, who was then the leader of the Reform party in the House of Commons, stimulated the movement. The House began its scrutiny with the administration of justice; and Bacon could not stand before it, for as the highest judge in England he was accused of taking bribes before rendering decisions, and of many cases of corruption so glaring that no defence was undertaken; and the House of Lords had no alternative but to sentence him to the Tower and fine him, to degrade him from his office, and banish him from the precincts of the court,—a fall so great, and the impression of it on the civilized world so tremendous, that the case of a judge accepting bribes has rarely since been known.

Bacon was imprisoned but a few days, his ruinous fine of £40,000 was remitted, and he was even soon after received at court; but he never again held office. He was hopelessly disgraced; he was a ruined man; and he bitterly felt the humiliation, and acknowledged the justice of his punishment. He had now no further object in life than to pursue his studies, and live comfortably in his retirement, and do what he could for future ages.

But before we consider his immortal legacy to the world, let us take one more view of the man, in order that we may do him justice, and remove some of the cruel charges against him as "the meanest of mankind."

It must be borne in mind that, from the beginning of his career until his fall, only four or five serious charges have been made against him, — that he was extravagant in his mode of life; that he was a sycophant and office-seeker; that he deserted his patron Essex; that he tortured Peacham, a Puritan clergyman, when tried for high-treason; that he himself was guilty of corruption as a judge.

In regard to the first charge, it is unfortunately too true; he lived beyond his means, and was in debt most of his life. This defect, as has been said, was the root of much evil; it destroyed his independence, detracted from the dignity of his character, created enemies, and led to a laxity of the moral sense which prepared the way for corruption, — thereby furnishing another illustration of that fatal weakness which degrades any man when he runs races with the rich, and indulges in a luxury and ostentation which he cannot afford. It was the curse of Cicero, of William Pitt, and of Daniel Webster. The first lesson which every public man should learn, especially if honored with important trusts, is to live within his income. However incon-

venient and galling, a stringent economy is necessary. But this defect is a very common one, particularly when men are luxurious, or brought into intercourse with the rich, or inclined to be hospitable and generous, or have a great imagination and a sanguine temperament. So that those who are most liable to fall into this folly have many noble qualities to offset it, and it is not a stain which marks the "meanest of mankind." Who would call Webster the meanest of mankind because he had an absurd desire to live like an English country gentleman?

In regard to sycophancy, — a disgusting trait, I admit, — we should consider the age, when everybody cringed to sovereigns and their favorites. Bacon never made such an abject speech as Omer Talon, the greatest lawyer in France, did to Louis XIII., in the Parliament of Paris. Three hundred years ago everybody bowed down to exalted rank: witness the obsequious language which all authors addressed to patrons in the dedication of their books. How small the chance of any man rising in the world, who did not court favors from those who had favors to bestow! Is that the meanest or the most uncommon thing in this world? If so, how ignominious are all politicians who flatter the people and solicit their votes? Is it not natural to be obsequious to those who have offices to bestow? This trait is not commendable, but is it the meanest thing we see?

In regard to Essex, nobody can approve of the ingratitude which Bacon showed to his noble patron. But, on the other hand, remember the good advice which Bacon ever gave him, and his constant efforts to keep him out of scrapes. How often did he excuse him to his royal mistress, at the risk of incurring her displeasure? And when Essex was guilty of a thousand times worse crime than ever Bacon committed,—even high-treason, in a time of tumult and insurrection,—and it became Bacon's task as prosecuting officer of the Crown to bring this great culprit to justice, was he required by a former friendship to sacrifice his duty and his allegiance to his sovereign, to screen a man who had perverted the affection of the noblest woman who ever wore a crown, and came near involving his country in a civil war? Grant that Essex had bestowed favors, and was an accomplished and interesting man,—was Bacon to ignore his official duties? He may have been too harsh in his procedure; but in that age all criminal proceedings were harsh and inexorable,—there was but little mercy shown to culprits, especially to traitors. If Elizabeth could bring herself, out of respect to her wounded honor and slighted kindness and the dignity of the realm and the majesty of the law, to surrender into the hands of justice one whom she so tenderly loved and magnificently rewarded, even when the sacrifice cost her both peace and life, snapped the last cord

which bound her to this world, — may we not forgive Bacon for the part he played? Does this fidelity to an official and professional duty, even if he were harsh, make him “the meanest of mankind”?

In regard to Peacham, it is true he was tortured, according to the practice of that cruel age; but Bacon had no hand in the issuing of the warrant against him for high-treason, although in accordance with custom he, as prosecuting officer of the Crown, examined Peacham under torture before his trial. The parson was convicted; but the sentence of death was not executed upon him, and he died in jail.

And in regard to corruption, — the sin which cast Bacon from his high estate, though fortunately he did not fall like Lucifer, never to rise again, — may not the verdict of the poet and the historian be rather exaggerated? Nobody has ever attempted to acquit Bacon for taking bribes. Nobody has ever excused him. He did commit a crime; but in palliation it might be said that he never decided against justice, and that it was customary for great public functionaries to accept presents. Had he taken them after he had rendered judgment instead of before, he might have been acquitted; for out of the seven thousand cases which he decided as Lord Chancellor, not one of them has been reversed: so that he said of himself, “I was the justest judge that England has had for fifty years; and I

to be in debt; he ha
cases he accepted pi
made, but was brave
who bribed him, — “
corrupt official general
a modern judge has l

denying his Master; and Marcus Aurelius persecuting the Christians; and Constantine putting to death his own son; and Theodosius slaughtering the citizens of Thessalonica; and Isabella establishing the Inquisition; and Sir Mathew Hale burning witches; and Cromwell stealing a sceptre; and Calvin murdering Servetus; and Queen Elizabeth lying and cheating and swearing in the midst of her patriotic labors for her country and civilization. Even the sun passes through eclipses. Have the spots upon the career of Bacon hidden the brightness of his general beneficence? Is he the meanest of men because he had great faults? When we speak of mean men, it is those whose general character is contemptible.

Now, see Bacon pursuing his honorable career amid rebuffs and enmities and jealousies, toiling in Herculean tasks without complaint, and waiting his time; always accessible, affable, gentle, with no vulgar pride, if he aped vulgar ostentation; calm, beneficent, studious, without envy or bitterness; interesting in his home, courted as a friend, admired as a philosopher, generous to the poor, kind to the servants who cheated him, with an unsubdued love of Nature as well as of books; not negligent of religious duties, a believer in God and immortality; and though broken in spirit, like a bruised reed, yet soaring beyond all his misfortunes to study the highest problems, and bequeathing his knowledge

at the bar, or annuify his defects, famous as deep as within the human race? At the historical point, and in making a telling philosopher. A man of the most rest regions of thought, lofty contemplation, benefit the world, or soul. "As a man, he was a man of the elegant, careless about money to pay them judge on the whole, his private life, or more cruel and harsh most of the public &

the whole a wrong impression of the man,—making him out worse than he was, considering his age and circumstances. Bacon's character, like that of most great men, has two sides; and while we are compelled painfully to admit that he had many faults, we shrink from classing him among bad men, as is implied in Pope's characterization of him as "the meanest of mankind."

We now take leave of the man, to consider his legacy to the world. And here again we are compelled to take issue with Macaulay, not in regard to the great fact that Bacon's inquiries tended to a new revelation of Nature, and by means of the method called *induction*, by which he sought to establish fixed principles of science that could not be controverted, but in reference to the *ends* for which he labored. "The aim of Bacon," says Macaulay, "was utility,—fruit; the multiplication of human enjoyments, . . . the mitigation of human sufferings, . . . the prolongation of life by new inventions,"—*dotare vitam humanum novis inventis et copiis*; "the conquest of Nature,"—dominion over the beasts of the field and the fowls of the air; the application of science to the subjection of the outward world; progress in useful arts,—in those arts which enable us to become strong, comfortable, and rich in houses, shops, fabrics, tools, merchandise, new vegetables,

world.

is not to assist the mind to lofty contemplation, but to enable mariners to verify degrees of latitude and regulate clocks. A college is not designed to train and discipline the mind, but to utilize science, and become a school of technology. Greek and Latin exercises are comparatively worthless, and even mathematics, unless they can be converted into practical use. Philosophy, as ordinarily understood, — that is, metaphysics, — is most idle of all, since it does not pertain to mundane wants. Hence the old Grecian philosopher labored in vain; and still more profitless were the disquisitions of the scholastics of the Middle Ages, since they were chiefly used to prop up unintelligible creeds. Theology is not of much account, since it pertains to mysteries we cannot solve. It is not with heaven or hell, or abstract inquiries, or divine certitudes, that we have to do, but the things of earth, — things that advance our material and outward condition. To be rich and comfortable is the end of life, — not meditations on abstract and eternal truth, such as elevate the soul or prepare it for a future and endless life. The certitudes of faith, of love, of friendship, are of small value when compared with the blessings of outward prosperity. Utilitarianism is the true philosophy, for this confines us to the world where we are born to labor, and enables us to make acquisitions which promote our comfort and ease. The chemist and the

manufacturer are our greatest benefactors, for they make for us oils and gases and paints, — things we must have. The philosophy of Bacon is an immense improvement on all previous systems, since it heralds the jubilee of trades, the millennium of merchants, the schools of thrift, the apostles of physical progress, the pioneers of enterprise, — the Franklins and Stephensons and Tyndals and Morses of our glorious era. Its watchword is progress. All hail, then, to the electric telegraph and telephones and Thames tunnels and Crystal Palaces and Niagara bridges and railways over the Rocky Mountains! The day of our deliverance is come; the nations are saved; the Brunels and the Fieldses are our victors and leaders! Crown them with Olympic leaves, as the heroes of our great games of life. And thou, O England! exalted art thou among the nations, — not for thy Oxfords and Westminster; not for thy divines and saints and martyrs and poets; not for thy Hookers and Leightons and Cranmers and Miltons and Burkes and Lockes; not for thy Reformation; not for thy struggles for liberty, — but for thy Manchesters and Birminghams, thy Portsmouth shipyards, thy London docks, thy Liverpool warehouses, thy mines of coal and iron, thy countless mechanisms by which thou bringest the wealth of nations into thy banks, and art enabled to buy the toil of foreigners and to raise thy standards on the farthest battlements of

India and China. These conquests and acquisitions are real, are practical; machinery over life, the triumph of physical forces, dominion over waves and winds,—these are the great victories which consummate the happiness of man; and these are they which flow from the philosophy which Bacon taught.

Now Macaulay does not directly say all these things, but these are the spirit and gist of the interpretation which he puts upon Bacon's writings. The philosophy of Bacon leads directly to these blessings; and these constitute its great peculiarity. And it cannot be denied that the new era which Bacon heralded was fruitful in these very things,—that his philosophy encouraged this new development of material forces; but it may be questioned whether he had not something else in view than mere utility and physical progress, and whether his method could not equally be applied to metaphysical subjects; whether it did not pertain to the whole domain of truth, and take in the whole realm of human inquiry. I believe that Bacon was interested, not merely in the world of matter, but in the world of mind; that he sought to establish principles from which sound deductions might be made, as well as to establish reliable inductions. Lord Campbell thinks that a perfect system of ethics could be made out of his writings, and that his method is equally well adapted to examine and classify the phenomena of

memory, of imagination, has never been surpassed in subtlety. No man ever more carefully studied the operation of his own mind and the intellectual character of others." Nor did Bacon despise metaphysical science, only the frivolous questions that the old scholastics associated with it, and the general barrenness of their speculations. He surely would not have disdained the subsequent inquiries of Locke, or Berkeley, or Leibnitz, or Kant. True, he sought definite knowledge,—something firm to stand upon, and which could not be controverted. No philosophy can be sound when the principle from which deductions are made is not itself certain or very highly probable, or when this principle, pushed to its utmost logical sequence, would lead to absurdity, or even to a conflict with human consciousness. To Bacon the old methods were wrong, and it was his primal aim to reform the scientific methods in order to arrive at truth; not truth for utilitarian ends chiefly, but truth for its own sake. He loved truth as Palestrina loved music, or Raphael loved painting, or Socrates loved virtue.

Now the method which was almost exclusively employed until Bacon's time is commonly called the *deductive* method; that is, some principle or premise was assumed to be true, and reasoning was made from this assumption. No especial fault was found with the reasoning of the great masters of logic like Aristotle and

the teachers of mankind to uphold the dogmas of the Church, which they did with masterly dialectical skill. Those were ages of Faith, and not of Inquiry. It was all-important to ground believers in a firm faith of the dogmas which were deemed necessary to support the Church and the cause of religion. They were regarded as absolute certainties. There was no dispute about the premises of the scholastic's arguments; and hence his dialectics strengthened the mind by the exercise of logical sports, and at the same time confirmed the faith.

The world never saw a more complete system of dogmatic theology than that elaborated by Thomas Aquinas. When the knowledge of the Greek and Hebrew was rare and imperfect, and it was impossible to throw light by means of learning and science on the texts of Scripture, it was well to follow the interpretation of such a great light as Augustine, and assume his dogmas as certainties, since they could not then be controverted; and thus from them construct a system of belief which would confirm the faith. But Aquinas, with his Aristotelian method of syllogism and definitions, could not go beyond Augustine. Augustine was the fountain, and the water that flowed from it in ten thousand channels could not rise above the spring; and as everybody appealed to and believed in Saint Augustine, it was well to construct a system from him to

make war on deduction, when its fundamental truths are established. Deduction is as much a necessary part of philosophy as induction: it is the peculiarity of the Scotch metaphysicians, who have ever deduced truths from those previously established. Deduction even enters into modern science as well as induction. When Cuvier deduced from a bone the form and habits of the mastodon; when Kepler deduced his great laws, all from the primary thought that there must be some numerical or geographical relation between the times, distances, and velocities of the revolving bodies of the solar system; when Newton deduced, as is said, the principle of gravitation from the fall of an apple; when Leverrier sought for a new planet from the perturbations of the heavenly bodies in their orbits,—we feel that deduction is as much a legitimate process as induction itself.

But deductive logic is the creation of Aristotle; and it was the authority of Aristotle that Bacon sought to subvert. The inductive process is also old, of which Bacon is called the father. How are these things to be reconciled and explained? Wherein and how did Bacon adapt his method to the discovery of truth, which was his principal aim,—that method which is the great cause of modern progress in science, the way to it being indicated by him pre-eminently?

The whole thing consists in this, that Bacon pointed

Mentis Humanæ, or “Phantoms of the Human Mind,” which compose the best-known part of the “*Novum Organum*.” “The Idols of the Tribe” would show the folly of attempting to penetrate further than the limits of the human faculties permit, as also “the liability of the intellect to be warped by the will and affections, and the like.” The “Idols of the Den” have reference to “the tendency to notice differences rather than resemblances, or resemblances rather than differences, in the attachment to antiquity or novelty, in the partiality to minute or comprehensive investigations.” “The Idols of the Market-Place” have reference to the tendency to confound words with things, which has ever marked controversialists in their learned disputations. In what he here says about the necessity for accurate definitions, he reminds us of Socrates rather than a modern scientist; this necessity for accuracy applies to metaphysics as much as it does to physics. “The Idols of the Theatre” have reference to perverse laws of demonstration which are the strongholds of error. This school deals in speculations and experiments confined to a narrow compass, like those of the alchemists, —too imperfect to elicit the light which should guide.

Bacon having completed his discussion of the *Idola*, then proceeds to point out the weakness of the old philosophies, which produced leaves rather than fruit, and were stationary in their character. Here he would

One of Bacon's lo

jects he presents to communicate knowledge, with no especial utilitarian end.

“The Advancement of Learning” is one of Bacon’s most famous productions, but I fail to see in it an objective purpose to enable men to become powerful or rich or comfortable; it is rather an abstract treatise, as dry to most people as legal disquisitions, and with no more reference to rising in the world than “Blackstone’s Commentaries” or “Coke upon Littleton.” It is a profound dissertation on the excellence of learning; its great divisions treating of history, poetry, and philosophy,—of metaphysical as well as physical philosophy; of the province of understanding, the memory, the will, the reason, and the imagination; and of man in society,—of government, of universal justice, of the fountains of law, of revealed religion.

And if we turn from the new method by which he would advance all knowledge, and on which his fame as a philosopher chiefly rests,—that method which has led to discoveries that even Bacon never dreamed of, not thinking of the fruit he was to bestow, but only the way to secure it,—even as a great inventor thinks more of his invention than of the money he himself may reap from it, as a work of creation to benefit the world rather than his own family, and in the work of which his mind revels in a sort of intoxicated delight, like a true poet when he constructs his lines, or a great

rapher, the essayist. In more worldliness than in "Milton," or Carlyle when even less, for Bacon did not to please himself and give. In these he had no worldly an imperishable fame. He sculptured his Moses; and the cares and duties of a great labors which might be called the pains of disease and the rest, to most people, is the great their lives.

Take his Essays,—these works,—so brilliant and so that even Archbishop Whateley they are scarcely an additional material.

the cynical wit of Montaigne, but those great certitudes which console in affliction, which kindle hope, which inspire lofty resolutions, — anchors of the soul, pillars of faith, sources of immeasurable joy, the glorious ideals of true objects of desire, the eternal unities of truth and love and beauty; all of which reveal the varied experiences of life and the riches of deeply-pondered meditation on God and Christianity, as well as knowledge of the world and the desirableness of its valued gifts. How beautiful are his thoughts on death, on adversity, on glory, on anger, on friendship, on fame, on ambition, on envy, on riches, on youth and old age, and divers other subjects of moral import, which show the elevation of his soul, and the subjective as well as the objective turn of his mind; not dwelling on what he should eat and what he should drink and wherewithal he should be clothed, but on the truths which appeal to our higher nature, and which raise the thoughts of men from earth to heaven, or at least to the realms of intellectual life and joy.

And then, it is necessary that we should take in view other labors which dignified Bacon's retirement, as well as those which marked his more active career as a lawyer and statesman, — his histories and biographies, as well as learned treatises to improve the laws of England; his political discourses, his judicial charges, his theological tracts, his speeches and letters and prayers:

these labors, as well as to arrive at knowledge, is as well as of the man. I like Socrates. He even so posititious truth, like Plato. Aristotle. He took away t Aquinas,—not to throw c inquiry or dialectical reaso better method at the know which once established, he drawn from them, leading to as induction itself. son. There are other truths besides those of physical science; there is greatness in deduction as well as in induction. Geometry — whose successive and progressive revelations are so inspiring, and which have come down to us from a remote antiquity, which are even now taught in our modern schools as Euclid demonstrated them, since they cannot be improved — is a purely deductive science. The scholastic philosophy, even if it was barren and unfruitful in leading to new truths, yet confirmed what was valuable in the old systems, and by the severity of its logic and its dialectical subtleties trained the European mind for the reception of the message of Luther and Bacon; and this was based on deductions, never wrong unless the premises are unsound. Theology is deductive reasoning from truths assumed to be fundamental, and is inductive only so far as it collates Scripture declarations, and interprets their meaning by the aid which learning brings. Is not this science worthy of some regard? Will it not live when all the speculations of evolutionists are forgotten, and occupy the thoughts of the greatest and profoundest minds so long as anything shall be studied, so long as the Bible shall be the guide of life? Is it not by deduction that we ascend from Nature herself to the God of Nature? What is more certain than deduction when the principles from which it reasons are indisputably established?

sophical teachings led to the machinery of the mines of California, or to that of the mills of Lowell? Some think that our modern improvements would have come whether Bacon had lived or not. But I would not disparage the labors of Bacon in pointing out the method which leads to scientific discoveries. Granting that he sought merely utility, an improvement in the outward condition of society, which is the view that Macaulay takes, I would not underrate his legacy. And even supposing that the blessings of material life—"the acre of Middlesex"—are as much to be desired as Macaulay, with the complacency of an eminently practical and prosperous man, seems to argue, I would not sneer at them. Who does not value them? Who will not value them so long as our mortal bodies are to be cared for? It is a pleasant thing to ride in "cars without horses," to feel in winter the genial warmth of grates and furnaces, to receive messages from distant friends in a moment of time, to cross the ocean without discomfort, with the "almost certainty" of safety, and save our wives and daughters from the ancient drudgeries of the loom and the knitting-needle. Who ever tires in gazing at a locomotive as it whirls along with the power of destiny? Who is not astonished at the triumphs of the engineer, the wonders of an ocean-steamer, the marvellous tunnels under lofty mountains? We feel that Titans have been sent to ease us of our burdens.

life is only reached by the true, the beautiful, and the good, which is worth more than object and possession. — the great realities, — machinery, carpets, diamonds, mirrors, gold, friendships, generous impulses. Look to Socrates: what rational, unassuming, unassuming-looking, impecunious, persecuted philosopher constituted teacher, without the least prospect of Athenian fame? What was he taught? Was it objective knowledge, the way to become rich and comfortable, the indefinite, the infinite, the Middlesex, — that which fed the material soul, and enabled it to receive vulgar rewards? What raised the naked intellect to intellectual life? What knowledge?

placidity to Descartes and Leibnitz and Kant? It may be very dignified for a modern savant to sit serenely on his tower of observation, indifferent to all the lofty speculations of the great men of bygone ages; yet those profound questions pertaining to the *λογος* and the *τα οντα*, which had such attractions for Augustine and Pascal and Calvin, did have as real bearing on human life and on what is best worth knowing, as the scales of a leuciscus cephalus or the limbs of a magnified animalculus, or any of the facts of which physical science can boast. The wonders of science are great, but so also are the secrets of the soul, the mysteries of the spiritual life, the truths which come from divine revelation. Whatever most dignifies humanity, and makes our labors sweet, and causes us to forget our pains, and kindles us to lofty contemplations, and prompts us to heroic sacrifice, is the most real and the most useful. Even the leaves of a barren and neglected philosophy may be in some important respects of more value than all the boasted fruit of utilitarian science. Is that which is most useful always the most valuable,—that, I mean, which gives the highest pleasure? Do we not plant our grounds with the acacia, the oak, the cedar, the elm, as well as with the apple, the pear, and the cherry? Are not flowers and shrubs which beautify the lawn as desirable as beans and turnips and cabbages? Is not the rose or

fruits of human invention, but which proved a canker that prepared the way to ruin? It was that pious Emperor who learned his wisdom from a slave, and who set a haughty defiance to all the grandeur and all the comforts of the highest position which earth could give, and spent his leisure hours in the quiet study of those truths which elevate the soul,—truths not taught by science or nature, but by communication with invisible powers.

Ah, what indeed is reality; what is the higher good; what is that which perishes never; what is that which assimilates man to Deity? Is it houses, is it lands, is it gold and silver, is it luxurious couches, is it the practical utilitarian comforts that pamper this mortal body in its brief existence? or is it women's loves and patriots' struggles, and sages' pious thoughts, affections, noble aspirations, Bethanies, the serenities of virtuous old age, the harmonies of unpoluted homes, the existence of art, of truth, of love; the hopes which last when sun and stars decay? Tell us, ye women, what are realities to you, — your carpets, your plate, your jewels, your luxurious banquets; or your husbands' love, your friends' esteem, your children's reverence? And ye, toiling men of business, what is really your highest joy,—your piles of gold, your marble palaces; or the pleasures of your homes, the approbation of your consciences, your hopes of

GALILEO.

ASTRONOMICAL DISCOVERIES.

AMONG the wonders of the sixteenth century was the appearance of a new star in the northern horizon, which, shining at first with a feeble light, gradually surpassed the brightness of the planet Jupiter; and then changing its color from white to yellow and from yellow to red, after seventeen months, faded away from the sight, and has not since appeared. This celebrated star, first seen by Tycho Brahe in the constellation Cassiopeia, never changed its position, or presented the slightest perceptible parallax. It could not therefore have been a meteor, nor a planet regularly revolving round the sun, nor a comet blazing with fiery nebulous light, nor a satellite of one of the planets, but a fixed star, far beyond our solar system. Such a phenomenon created an immense sensation, and has never since been satisfactorily explained by philosophers. In the infancy of astronomical science it was regarded by astrologers as a sign to portend the birth of an extraordinary individual.

were those scholars of --

and collating manuscripts, translating the Scriptures, and stimulating the learned to emancipate themselves from the trammels of the scholastic philosophers.

Then rose up the reformers, headed by Luther, consigning to destruction the emblems and ceremonies of mediæval superstition, defying popes, burning bulls, ridiculing monks, exposing frauds, unravelling sophistries, attacking vices and traditions with the new arms of reason, and asserting before councils and dignitaries the right of private judgment and the supreme authority of the Bible in all matters of religious faith.

And then appeared the defenders of their cause, by force of arms maintaining the great rights of religious liberty in France, Germany, Switzerland, Holland, and England, until Protestantism was established in half of the countries that had for more than a thousand years servilely bowed down to the authority of the popes. Genius stimulates and enterprise multiplies all the energies and aims of emancipated millions. Before the close of the sixteenth century new continents are colonized, new modes of warfare are introduced, manuscripts are changed into printed books, the comforts of life are increased, governments are more firmly established, and learned men are enriched and honored. Feudalism has succumbed to central power, and barons revolve around their sovereign at court rather than compose an independent authority. Before that century

had been numbered with the ages past, the Portuguese had sailed to the East Indies, Sir Francis Drake had circumnavigated the globe, Pizarro had conquered Peru, Sir Walter Raleigh had colonized Virginia, Ricci had penetrated to China, Lescot had planned the palace of the Louvre, Raphael had painted the Transfiguration, Michael Angelo had raised the dome of St. Peter's, Giacomo della Porta had ornamented the Vatican with mosaics, Copernicus had taught the true centre of planetary motion, Dumoulin had introduced into French jurisprudence the principles of the Justinian code, Ariosto had published the "Orlando Furioso," Cervantes had written "Don Quixote," Spenser had dedicated his "Faery Queen," Shakspeare had composed his immortal dramas, Hooker had devised his "Ecclesiastical Polity," Cranmer had published his Forty-two Articles, John Calvin had dedicated to Francis I. his celebrated "Institutes," Luther had translated the Bible, Bacon had begun the "Instauration of Philosophy," Bellarmine had systematized the Roman Catholic theology, Henry IV. had signed the Edict of Nantes, Queen Elizabeth had defeated the Invincible Armada, and William the Silent had achieved the independence of Holland.

Such were some of the lights and some of the enterprises of that great age, when the profoundest questions pertaining to philosophy, religion, law, and government were discussed with the enthusiasm and fresh-

ness of a revolutionary age; when men felt the inspiration of a new life, and looked back on the Middle Ages with disgust and hatred, as a period which enslaved the human soul. But what peculiarly marked that period was the commencement of those marvellous discoveries in science which have enriched our times and added to the material blessings of the new civilization. Tycho Brahe, Copernicus, Galileo, Kepler, and Bacon inaugurated the era which led to progressive improvements in the physical condition of society, and to those scientific marvels which have followed in such quick succession and produced such astonishing changes that we are fain to boast that we have entered upon the most fortunate and triumphant epoch in our world's history.

Many men might be taken as the representatives of this new era of science and material inventions, but I select Galileo Galilei as one of the most interesting in his life, opinions, and conflicts.

Galileo was born at Pisa, in the year 1564, the year that Calvin and Michael Angelo died, four years after the birth of Bacon, in the sixth year of the reign of Elizabeth, and the fourth of Charles IX., about the time when the Huguenot persecution was at its height, and the Spanish monarchy was in its most prosperous state, under Philip II. His parents were of a noble but

impoverished Florentine family; and his father, who was a man of some learning, — a writer on the science of music, — gave him the best education he could afford. Like so many of the most illustrious men, he early gave promise of rare abilities. It was while he was a student in the university of his native city that his attention was arrested by the vibrations of a lamp suspended from the ceiling of the cathedral; and before he had quitted the church, while the choir was chanting mediæval anthems, he had compared those vibrations with his own pulse, which after repeated experiments, ended in the construction of the first pendulum, — applied not as it was by Huygens to the measurement of time, but to medical science, to enable physicians to ascertain the rate of the pulse. But the pendulum was soon brought into the service of the clockmakers, and ultimately to the determination of the form of the earth, by its minute irregularities in diverse latitudes, and finally to the measurement of differences of longitude by its connection with electricity and the recording of astronomical observations. Thus it was that the swinging of a cathedral lamp, before the eye of a man of genius, has done nearly as much as the telescope itself to advance science, to say nothing of its practical uses in common life.

Galileo had been destined by his father to the profession of medicine, and was ignorant of mathematics. He

amused his leisure hours with painting and music, and in order to study the principles of drawing he found it necessary to acquire some knowledge of geometry, much to the annoyance of his father, who did not like to see his mind diverted from the prescriptions of Hippocrates and Galen. The certain truths of geometry burst upon him like a revelation, and after mastering Euclid he turned to Archimedes with equal enthusiasm. Mathematics now absorbed his mind, and the father was obliged to yield to the bent of his genius, which seemed to disdain the regular professions by which social position was most surely effected. He wrote about this time an essay on the Hydrostatic Balance, which introduced him to Guido Ubaldo, a famous mathematician, who induced him to investigate the subject of the centre of gravity in solid bodies. His treatise on this subject secured an introduction to the Grand Duke of Tuscany, who perceived his merits, and by whom he was appointed a lecturer on mathematics at Pisa, but on the small salary of sixty crowns a year..

This was in 1589, when he was twenty-five, an enthusiastic young man, full of hope and animal spirits, the charm of every circle for his intelligence, vivacity, and wit; but bold and sarcastic, contemptuous of ancient dogmas, defiant of authority, and therefore no favorite with Jesuit priests and Dominican professors. It is said that he was a handsome man, with bright

Galileo looks, such as painters in that age loved to perpetrate upon the canvas ; hilarious and cheerful, fond of good cheer, yet a close student, obnoxious only to formalities and narrow pedants and treadmill professors and bigoted priests,—all of whom sought to molest him, yet to whom he was either indifferent or scornful, holding them and their formulas up to ridicule. He now directed his inquiries to the mechanical doctrines of Aristotle, to whose authority the schools had long bowed down, and whom he too regarded as one of the great intellectual giants of the world, yet not to be credited without sufficient reasons. Before the "*Novum Organum*" was written, he sought, as Bacon himself pointed out, the way to arrive at truth, not to a foundation to stand upon, a principle tested by experience, which, when established by experiment, would serve for sure deductions.

Now one of the principles assumed by Aristotle, and which had never been disputed, was, that if different weights of the same material were let fall from the same height, the heavier would reach the ground sooner than the lighter, and in proportion to the difference of weight. This assumption Galileo denied, and asserted that, with the exception of a small difference owing to the resistance of the air, both would fall to the ground in the same space of time. To prove his position by actual experiment, he repaired to the lean-

ing tower of Pisa, and demonstrated that he was right and Aristotle was wrong. The Aristotelians would not believe the evidence of their own senses, and ascribed the effect to some unknown cause. To such a degree were men enslaved by authority. This provoked Galileo, and led him to attack authority with still greater vehemence, adding mockery to sarcasm; which again exasperated his opponents, and doubtless laid the foundation of that personal hostility which afterwards pursued him to the prison of the Inquisition. This blended arrogance and asperity in a young man was offensive to the whole university, yet natural to one who had overturned one of the favorite axioms of the greatest master of thought the world had seen for nearly two thousand years; and the scorn and opposition with which his discovery was received increased his rancor, so that he, in his turn, did not render justice to the learned men arrayed against him, who were not necessarily dull or obstinate because they would not at once give up the opinions in which they were educated, and which the learned world still accepted. Nor did they oppose and hate him for his new opinions, so much as from dislike of his personal arrogance and bitter sarcasms.

At last his enemies made it too hot for him at Pisa. He resigned his chair (1592), but only to accept a higher position at Padua, on a salary of one hundred and eighty

florins, — not, however, adequate to his support, so that he was obliged to take pupils in mathematics. To show the comparative estimate of that age of science, the fact may be mentioned that the professor of scholastic philosophy in the same university was paid fourteen hundred florins. This was in 1592; and the next year Galileo invented the thermometer, still an imperfect instrument, since air was not perfectly excluded. At this period his reputation seems to have been established as a brilliant lecturer rather than as a great discoverer, or even as a great mathematician; for he was immeasurably behind Kepler, his contemporary, in the power of making abstruse calculations and numerical combinations. In this respect Kepler was inferior only to Copernicus, Newton, and Laplace in our times, or Hipparchus and Ptolemy among the ancients; and it is to him that we owe the discovery of those great laws of planetary motion from which there is no appeal, and which have never been rivalled in importance except those made by Newton himself, — laws which connect the mean distance of the planets from the sun with the times of their revolutions; laws which show that the orbits of planets are elliptical, not circular; and that the areas described by lines drawn from the moving planet to the sun are proportionable to the times employed in the motion. What an infinity of calculation, in the infancy of science, — before the invention of

logarithms, — was necessary to arrive at these truths! What fertility of invention was displayed in all his hypotheses; what patience in working them out; what magnanimity in discarding those which were not true! What power of guessing, even to hit upon theories which could be established by elaborate calculations, — all from the primary thought, the grand axiom, which Kepler was the first to propose, that there must be some numerical or geometrical relations among the times, distances, and velocities of the revolving bodies of the solar system! It would seem that although his science was deductive, he invoked the aid of induction also: a great original genius, yet modest like Newton; a man who avoided hostilities, yet given to the most boundless enthusiasm on the subjects to which he devoted his life. How intense his raptures! “Nothing holds me,” he writes, on discovering his great laws; “I will indulge in my sacred fury. I will boast of the golden vessels I have stolen from the Egyptians. If you forgive me, I rejoice. If you are angry, it is all the same to me. The die is cast; the book is written, — to be read either now, or by posterity, I care not which. It may well wait a century for a reader, as God has waited six thousand years for an observer.”

We do not see this sublime repose in the attitude of Galileo, — this falling back on his own conscious great-

ness, willing to let things take their natural course; but rather, on the other hand, an impatience under contradiction, a vehement scorn of adversaries, and an intellectual arrogance that gave offence, and impeded his career, and injured his fame. No matter how great a man may be, his intellectual pride is always offensive; and when united with sarcasm and mockery it will make bitter enemies, who will pull him down.

Galileo, on his transfer to Padua, began to teach the doctrines of Copernicus, — a much greater genius than he, and yet one who provoked no enmities, although he made the greatest revolution in astronomical knowledge that any man ever made, since he was in no haste to reveal his discoveries, and stated them in a calm and inoffensive way. I doubt if new discoverers in science meet with serious opposition when men themselves are not attacked, and they are made to appeal to calm intelligence, and war is not made on those Scripture texts which seem to controvert them. Even theologians receive science when science is not made to undermine theological declarations, and when the divorce of science from revelation, reason from faith, as two distinct realms, is vigorously insisted upon. Pascal incurred no hostilities for his scientific investigations, nor Newton, nor Laplace. It is only when scientific men sneer at the Bible because its declarations cannot always be harmonized with science, that the hostilities of theologians

are provoked. And it is only when theologians deny scientific discoveries that seem to conflict with texts of Scripture, that opposition arises among scientific men. It would seem that the doctrines of Copernicus were offensive to churchmen on this narrow ground. It was hard to believe that the earth revolved around the sun, when the opinions of the learned for two thousand years were unanimous that the sun revolved around the earth. Had both theologian and scientist let the Bible alone, there would not have been a bitter war between them. But scientists were accused by theologians of undermining the Bible; and the theologians were accused of stupid obstinacy, and were mercilessly exposed to ridicule.

That was the great error of Galileo. He made fun and sport of the theologians, as Samson did of the Philistines; and the Philistines of Galileo's day cut off his locks and put out his eyes when the Pope put him into their power,—those Dominican inquisitors who made a crusade against human thought. If Galileo had shown more tact and less arrogance, possibly those Dominican doctors might have joined the chorus of universal praise; for they were learned men, although devoted to a bad system, and incapable of seeing truth when their old authorities were ridiculed and set at naught. Galileo did not deny the Scriptures, but his spirit was mocking; and he seemed to prejudiced people

to undermine the truths which were felt to be vital for the preservation of faith in the world. And as some scientific truths seemed to be adverse to Scripture declarations, the transition was easy to a denial of the inspiration which was claimed by nearly all Christian sects, both Catholic and Protestant.

The intolerance of the Church in every age has driven many scientists into infidelity; for it cannot be doubted that the tendency of scientific investigation has been to make scientific men incredulous of divine inspiration, and hence to undermine their faith in dogmas which good men have ever received, and which are supported by evidence that is not merely probable but almost certain. And all now that seems wanting to harmonize science with revelation is, on the one hand, the re-examination of the Scripture texts on which are based the principia from which deductions are made, and which we call theology; and, on the other hand, the rejection of indefensible statements which are at war with both science and consciousness, except in those matters which claim special supernatural agency, which we can neither prove nor disprove by reason; for supernaturalism claims to transcend the realm of reason altogether in what relates to the government of God,—ways that no searching will ever enable us to find out with our limited faculties and obscured understanding. When the two realms of reason and faith are kept

distinct, and neither encroaches on the other, then the discoveries and claims of science will meet with but little opposition from theologians, and they will be left to be sifted by men who alone are capable of the task.

Thus far science, outside of pure mathematics, is made up of theories which are greatly modified by advancing knowledge, so that they cannot claim in all respects to be eternally established, like the laws of Kepler and the discoveries of Copernicus, — the latter of which were only true in the main fact that the earth revolves around the sun. But even he retained epicycles and excentrics, and could not explain the unequal orbits of planetary motion. In fact he retained many of the errors of Hipparchus and Ptolemy. Much, too, as we are inclined to ridicule the astronomy of the ancients because they made the earth the centre, we should remember that they also resolved the orbits of the heavenly bodies into circular motions, discovered the precession of the equinoxes, and knew also the apparent motions of the planets and their periods. They could predict eclipses of the sun and moon, and knew that the orbit of the sun and planets was through a belt in the heavens, of a few degrees in width, which they called the Zodiac. They did not know, indeed, the difference between real and apparent motion, nor the distance of the sun and stars, nor their relative size and weight, nor the laws of motion, nor the principles of

gravitation, nor the nature of the Milky Way, nor the existence of nebulae, nor any of the wonders which the telescope reveals; but in the severity of their mathematical calculations they were quite equal to modern astronomers.

If Copernicus revolutionized astronomy by proving the sun to be the centre of motion to our planetary system, Galileo gave it an immense impulse by his discoveries with the telescope. These did not require such marvellous mathematical powers as made Kepler and Newton immortal, — the equals of Ptolemy and Hipparchus in mathematical demonstration, — but only accuracy and perseverance in observations. Doubtless he was a great mathematician, but his fame rests on his observations and the deductions he made from them. These were more easily comprehended, and had an objective value which made him popular: and for these discoveries he was indebted in a great measure to the labors of others, — it was mechanical invention applied to the advancement of science. The utilization of science was reserved to our times; and it is this utilization which makes science such a handmaid to the enrichment of its votaries, and holds it up to worship in our laboratories and schools of technology and mines, — not merely for itself, but also for the substantial fruit it yields.

It was when Galileo was writing treatises on the

Structure of the Universe, on Local Motion, on Sound, on Continuous Quantity, on Light, on Colors, on the Tides, on Dialing,—subjects that also interested Lord Bacon at the same period,—and when he was giving lectures on these subjects with immense *éclat*, frequently to one thousand persons (scarcely less than what Abélard enjoyed when he made fun of the more conservative schoolmen with whom he was brought in contact), that he heard, while on a visit to Venice, that a Dutch spectacle-maker had invented an instrument which was said to represent distant objects nearer than they usually appeared. This was in 1609, when he, at the age of fifty-five, was the idol of scientific men, and was in the enjoyment of an ample revenue, giving only sixty half-hours in the year to lectures, and allowed time to prosecute his studies in that “sweet solitariness” which all true scholars prize, and without which few great attainments are made. The rumor of the invention excited in his mind the intensest interest. He sought for the explanation of the fact in the doctrine of refraction. He meditated day and night. At last he himself constructed an instrument,—a leaden organ pipe with two spectacle glasses, both plain on one side, while one of them had its opposite side convex, and the other its second side concave.

This crude little instrument, which magnified but three times, he carries in triumph back to Venice. It

power, and points it to the planet Jupiter. On the 7th of January, 1610, he observes three little stars near the body of the planet, all in a straight line and parallel to the ecliptic, two on the east and one on the west of Jupiter. On the next observation he finds that they have changed places, and are all on the west of Jupiter; and the next time he observes them they have changed again. He also discovers that there are four of these little stars revolving round the planet. What is the explanation of this singular phenomenon? They cannot be fixed stars, or planets; they must then be moons. Jupiter is attended with satellites like the earth, but has four instead of one! The importance of this last discovery was of supreme value, for it confirmed the heliocentric theory. Old Kepler is filled with agitations of joy; all the friends of Galileo extol his genius; his fame spreads far and near; he is regarded as the ablest scientific man in Europe.

His enemies are now dismayed and perplexed. The principal professor of philosophy at Padua would not even look through the wonderful instrument. Sissi of Florence ridicules the discovery. "As," said he, "there are only seven apertures of the head,—two eyes, two ears, two nostrils, and one mouth,—and as there are only seven days in the week and seven metals, how can there be seven planets?"

But science, discarded by the schools, fortunately

of the ruling princes. Cosimo de Medici presented him by his senses to the voice of authority. He serves the new satellites with Galileo at Padua, and has him a present of one thousand florins, and a nominal office, — that of lecturing at Padua to princes, on a salary of one thousand florins. He is now the chosen companion of the great and the admiration of Italy. He has rendered immense service to astronomy. "His discovery of the satellites of Jupiter," says Herschel, "has long turned to the opinion of mankind against the Copernican system, and pointed out a difference between speculative astronomy and practical astronomy."

Galileo did not complete the catalogue of his discoveries. In 1610 he perceived that Saturn appeared as a ring, and excited the curiosity of astronomers by the publication of his first "Enigma." — *Altissimam stellam in cœlo observari*. He could not then explain the rings; the planet seemed through his telescope to be the form of three concentric O's. Soon after examining Venus, he saw her in the form of a crescent; *Ubi stellæ figuræ amulatur mater amorum*, — "Where stars is the phases of the moon."

At last he discovers the spots upon the sun's disk, and that they all revolve with the sun, and therefore that the sun has a revolution in about twenty-eight

days, and may be moving on in a larger circle, with all its attendant planets, around some distant centre.

Galileo has now attained the highest object of his ambition. He is at the head, confessedly, of all the scientific men of Europe. He has an ample revenue; he is independent, and has perfect leisure. Even the Pope is gracious to him when he makes a visit to Rome; while cardinals, princes, and ambassadors rival one another in bestowing upon him attention and honors.

But there is no height of fortune from which a man may not fall; and it is usually the proud, the ostentatious, and the contemptuous who do fall, since they create envy, and are apt to make social mistakes. Galileo continued to exasperate his enemies by his arrogance and sarcasms. "They refused to be dragged at his chariot-wheels." "The Aristotelian professors," says Brewster, "the temporizing Jesuits, the political churchmen, and that timid but respectable body who at all times dread innovation, whether it be in legislation or science, entered into an alliance against the philosophical tyrant who threatened them with the penalties of knowledge." The church dignitaries were especially hostile, since they thought the tendency of Galileo's investigations was to undermine the Bible. Flanked by the logic of the schools and the popular interpretation of Scripture, and backed by the civil power, they were eager for war. Galileo wrote a letter to his friend

the Abbé Castelli, the object of which was "to prove that the Scriptures were not intended to teach science and philosophy," but to point out the way of salvation. He was indiscreet enough to write a longer letter of seventy pages, quoting the Fathers in support of his views, and attempting to show that Nature and Scripture could not speak a different language. It was this reasoning which irritated the dignitaries of the Church more than his discoveries, since it is plain that the literal language of Scripture upholds the doctrine that the sun revolves around the earth. He was wrong or foolish in trying to harmonize revelation and science. He should have advanced his truths of science and left them to take care of themselves. He should not have meddled with the dogmas of his enemies: not that he was wrong in doing so, but it was not politic or wise; and he was not called upon to harmonize Scripture with science.

So his enemies busily employed themselves in collecting evidence against him. They laid their complaints before the Inquisition of Rome, and on the occasion of paying a visit to that city, he was summoned before that tribunal which has been the shame and the reproach of the Catholic Church. It was a tribunal utterly incompetent to sit upon his case, since it was ignorant of science. In 1615 it was decreed that Galileo should renounce his obnoxious doctrines, and pledge

himself neither to defend nor publish them in future. And Galileo accordingly, in dread of prison, appeared before Cardinal Bellarmine and declared that he would renounce the doctrines he had defended. This cardinal was not an ignorant man. He was the greatest theologian of the Catholic Church; but his bitterness and rancor in reference to the new doctrines were as marked as his scholastic learning. The Pope, supposing that Galileo would adhere to his promise, was gracious and kind.

But the philosopher could not resist the temptation of ridiculing the advocates of the old system. He called them "paper philosophers." In private he made a mockery of his persecutors. One Saisi undertook to prove from Suidas that the Babylonians used to cook eggs by whirling them swiftly on a sling; to which he replied: "If Saisi insists on the authority of Suidas, that the Babylonians cooked eggs by whirling them on a sling, I will believe it. But I must add that we have eggs and slings, and strong men to whirl them, yet they will not become cooked; nay, if they were hot at first, they more quickly became cool; and as there is nothing wanting to us but to be Babylonians, it follows that being Babylonians is the true cause why the eggs became hard." Such was his prevailing mockery and ridicule. "Your Eminence," writes one of his friends to the Cardinal D'Este, "would be delighted if you

was delayed nearly two
cles to be surmounted, a

word not to advocate the Copernican theory, which was already sufficiently established in the opinions of philosophers. The form of the book was even offensive, in the shape of dialogues, where some of the chief speakers were his enemies. One of them he ridiculed under the name of Simplicio. This was supposed to mean the Pope himself, — so they made the Pope believe, and he was furious. Old Cardinal Bellarmine roared like a lion. The whole Church, as represented by its dignitaries, seemed to be against him. The Pope seized the old weapons of the Clements and the Gregories to hurl upon the daring innovator; but delayed to hurl them, since he dealt with a giant, covered not only by the shield of the Medici, but that of Minerva. So he convened a congregation of cardinals, and submitted to them the examination of the detested book. The author was summoned to Rome to appear before the Inquisition, and answer at its judgment-seat the charges against him as a heretic. The Tuscan ambassador expostulated with his Holiness against such a cruel thing, considering Galileo's age, infirmities, and fame, — all to no avail. He was obliged to obey the summons. At the age of seventy this venerated philosopher, infirm, in precarious health, appeared before the Inquisition of cardinals, not one of whom had any familiarity with abstruse speculations, or even with mathematics.

After a fitting time has elapsed, — four months of dignified session, — the mind of the Holy Tribunal is made up. Its judgment is ready. On the 22d of June, 1633, the prisoner appears in penitential dress at the convent of Minerva, and the presiding cardinal, in his scarlet robes, delivers the sentence of the Court, — that Galileo, as a warning to others, and by way of salutary penance, be condemned to the formal prison of the Holy Office, and be ordered to recite once a week the seven Penitential Psalms for the benefit of his soul, — apparently a light sentence, only to be nominally imprisoned a few days, and to repeat those Psalms which were the life of blessed saints in mediæval times. But this was nothing. He was required to recant, to abjure the doctrines he had taught; not in private, but publicly before the world. Will he recant? Will he subscribe himself an imposter? Will he abjure the doctrines on which his fame rests? Oh, tell it not in Gath! The timid, infirm, life-loving old patriarch of science falls. He is not great enough for martyrdom. He chooses shame. In an evil hour this venerable sage falls down upon his knees before the assembled cardinals, and reads aloud this recantation: “I, Galileo Galilei, aged seventy, on my knees before you most reverend lords, and having my eye on the Holy Gospel, which I do touch with my lips, thus publish and declare, that I believe, and always have

believed, and always will believe every article which the Holy Catholic Roman Church holds and teaches. And as I have written a book in which I have maintained that the sun is the centre, which doctrine is repugnant to the Holy Scriptures, I, with sincere heart and unfeigned faith, do abjure and detest, and curse the said error and heresy, and all other errors contrary to said Holy Church, whose penance I solemnly swear to observe faithfully, and all other penances which have been or shall be laid upon me."

It would appear from this confession that he did not declare his doctrines false, only that they were in opposition to the Scriptures; and it is also said that as he arose from his knees he whispered to a friend, "It does move, nevertheless." As some excuse for him, he acted with the certainty that he would be tortured if he did not recant; and at the worst he had only affirmed that his scientific theory was in opposition to the Scriptures. He had not denied his master, like Peter; he had not recanted the faith like Cranmer; he had simply yielded for fear of bodily torments, and therefore was not sincere in the abjuration which he made to save his life. Nevertheless, his recantation was a fall, and in the eyes of the scientific world perhaps greater than that of Bacon. Galileo was false to philosophy and himself. Why did he suffer himself to be conquered by priests he despised? Why did so bold

and witty and proud a man betray his cause? Why did he not accept the penalty of intellectual freedom, and die, if die he must? What was life to him, diseased, infirm, and old? What had he more to gain? Was it not a good time to die and consummate his protests? Only one hundred and fifty years before, one of his countrymen had accepted torture and death rather than recant his religious opinions. Why could not Galileo have been as great in martyrdom as Savonarola? He was a renowned philosopher and brilliant as a man of genius, — but he was a man of the world; he loved ease and length of days. He could ridicule and deride opponents, — he could not suffer pain. He had a great intellect, but not a great soul. There were flaws in his morality; he was anything but a saint or hero. He was great in mind, and yet he was far from being great in character. We pity him, while we exalt him. Nor is the world harsh to him; it forgives him for his services. The worst that can be said, is that he was not willing to suffer and die for his opinions: and how many philosophers are there who are willing to be martyrs?

Nevertheless, in the eyes of philosophers he has disgraced himself. Let him then return to Florence, to his own Arceti. He is a silenced man. But he is silenced, not because he believed with Copernicus, but because he ridiculed his enemies and confronted the Church, and in the eyes of blinded partisans had

attacked divine authority. Why did Copernicus escape persecution? The Church must have known that there was something in his discoveries, and in those of Galileo, worthy of attention. About this time Pascal wrote: "It is vain that you have procured the condemnation of Galileo. That will never prove the earth to be at rest. If unerring observation proves that it turns round, not all mankind together can keep it from turning, or themselves from turning with it."

But let that persecution pass. It is no worse than other persecutions, either in Catholic or Protestant ranks. It was no worse than burning witches. Not only is intolerance in human nature, but there is a repugnance among the learned to receive new opinions when these interfere with their ascendancy. The opposition to Galileo's discoveries was no greater than that of the Protestant Church, half a century ago, to some of the inductions of geology. How bitter the hatred, even in our times, to such men as Huxley and Darwin! True, they have not proved their theories as Galileo did; but they gave as great a shock as he to the minds of theologians. All science is progressive, yet there are thousands who oppose its progress. And if learning and science should establish a different meaning to certain texts from which theological deductions are drawn, and these premises be undermined, there would be the same bitterness among the defenders of

the present system of dogmatic theology. Yet theology will live, and never lose its dignity and importance; only, some of its present assumptions may be discarded. God will never be dethroned from the world he governs; but some of his ways may appear to be different from what was once supposed. And all science is not only progressive, but it appears to be bold and scornful and proud,—at least, its advocates are and ever have been contemptuous of all other departments of knowledge but its own. So narrow and limited is the human mind in the midst of its triumphs. So full of prejudices are even the learned and the great.

Let us turn then to give another glance at the fallen philosopher in his final retreat at Arceti. He lives under restrictions. But they allow him leisure and choice wines, of which he is fond, and gardens and friends; and many come to do him reverence. He amuses his old age with the studies of his youth and manhood, and writes dialogues on Motion, and even discovers the phenomena of the moon's libration; and by means of the pendulum he gives additional importance to astronomical science. But he is not allowed to leave his retirement, not even to visit his friends in Florence. The wrath of the Inquisition still pursues him, even in his villa at Arceti in the suburbs of Florence. Then renewed afflictions come. He loses his daughter, who was devoted to him; and her death

nearly plunges him into despair. The bulwarks of his heart break down; a flood of grief overwhelms his stricken soul. His appetite leaves him; his health forsakes him; his infirmities increase upon him. His right eye loses its power, — that eye that had seen more of the heavens than the eyes of all who had gone before him. He becomes blind and deaf, and cannot sleep, afflicted with rheumatic pains and maladies forlorn. No more for him is rest, or peace, or bliss; still less the glories of his brighter days, — the sight of glittering fields, the guns of heaven, without which

“ Neither breath of Morn, when she ascends
With charm of earliest birds, nor rising sun
On this delightful land, nor herb, fruit, flower
Glistering with dew, nor fragrance after showers,
Nor grateful evening mild, . . . is sweet.”

No more shall he gaze on features that he loves, or stars, or trees, or hills. No more to him

“ Return”

Day, or the sweet approach of even or morn,
Or sight of vernal bloom, or summer's rose,
Or flocks, or herds, or human face divine;
But clouds, instead, and ever-during dark
Surround” [him]

It was in those dreary desolate days at Arceta,

“ Unseen

In manly beauty Milton stood before him,
Gazing in reverent awe, — Milton, his guest,

Just then come forth, all life and enterprise ;
While he in his old age, . . .
 . . . exploring with his staff,
His eyes upturned as to the golden sun,
His eyeballs idly rolling."

This may have been the punishment of his recantation, — not Inquisitorial torture, but the consciousness that he had lost his honor. Poor Galileo ! thine illustrious visitor, when *his* affliction came, could cast his sightless eyeballs inward, and see and tell "things unattempted yet in prose or rhyme," — not

"Rocks, caves, lakes, bogs, fens, and shades of death,

Where all life dies, death lives, and Nature breeds

Gorgons, and Hydras, and Chimeras dire,"

but of "eternal Providence," and "Eden with surpassing glory crowned," and "our first parents," and of "salvation," "goodness infinite," of "wisdom," which when known we need no higher though all the stars we know by name, —

"All secrets of the deep, all Nature's works,
Or works of God in heaven, or air, or sea."

And yet, thou stricken observer of the heavenly bodies ! hadst thou but known what marvels would be revealed by the power of thy wondrous instrument after thou should'st be laid lifeless and cold beneath the
